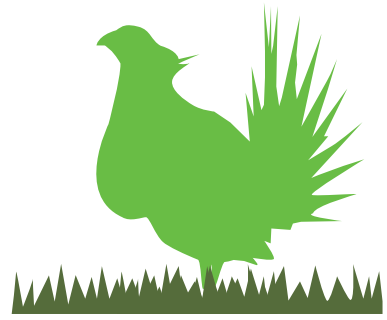
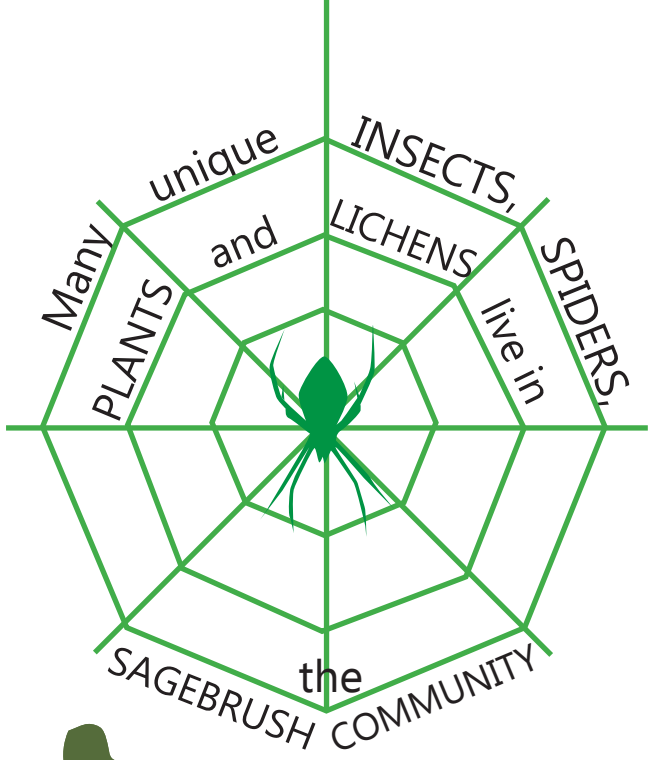
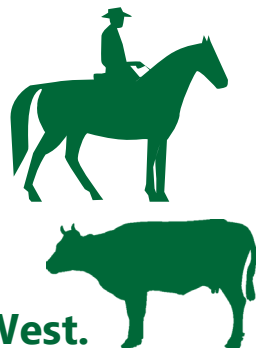
WHY CARE
ABOUT AMERICA's SAGEBRUSH?





SAGEBRUSH COMMUNITIES are central to summer **livestock grazing throughout much of the West.**

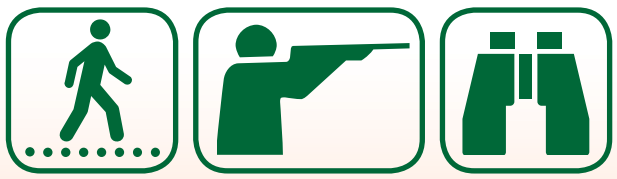


MANY SPECIES found in sagebrush, such as the GREATER SAGE-GROUSE live **NOWHERE ELSE** in the world.

Nursery Area

for wildlife species such as pygmy rabbits, pronghorn, sagebrush lizard, mule deer, elk and golden eagles.

SAGEBRUSH serves as a **"nurse"** plant for other plants, many of which are important to sustaining grazing wildlife and domestic livestock.



THE SAGEBRUSH ECOSYSTEM

supports a variety of recreational activities, notably hunting for big game species and upland birds, which contribute to local economies.

The **SAGEBRUSH ECOSYSTEM** is **one of the most imperiled ecosystems in America.**
