Good work, thanks. This is the type of road map we need.

- Renewable energy habitat loss and fragmentation *(why do we need to split these out?)*

politically I think we need to differentiate between the two. There may be a difference in magnitude of threat - I'm not so sure but what wind energy may be a greater threat than oil and gas. Oil and gas is transitory - sooner or later the resource will run out. I could see fields of wind turbines just growing and growing and.....

but politically, since this administration is so keen on renewables, I think we will have better luck with the package if we don't lump them.

certainly not something I'm passionate about.

> Thank you both for your continuing energy and input to this process. My goal is to get some convergence on an actual analytical framework in order to work with the ARDs to set the most productive agenda for next week. Mike wants to widen the circle for the 6/17 meeting, bring in a lot more people, including USGS. While I think we need to do that soon, I do not think it will be productive next week UNLESS we actually have an analytical

framework laid out that we all agree is a good start.

Thanks a million,

Noreen
