Attached please find the latest set of maps we have compiled based upon a review of the geologic data for potential locatable mineral development. The larger map is one which would be incorporated into the Wyoming 9-Plan amendment, the second is a zoomed in view of the area we have been reviewing. Brett's message below also includes the acreage calculations for each of the potential designations: existing withdrawals, recommended for withdrawal, consider for recommendation for withdrawal and open for locatable mineral development.

If you could please let me know if you have any questions with these areas tomorrow morning I would greatly appreciate it. Thanks.

Subject: *Re: Sage-Grouse Planning Questions for RMG*

Pam,
Attached are the maps for the new recommended for withdrawal areas. Also, here are the new acreage figures

Withdrawn in Core: 1,757,606 ac
Recommended for Withdrawal: 256,408 ac
Considered for Recommendation for Withdrawal: 894,304 ac
Open to Entry in Core: 3,766,892 ac

(Note: The Recommended for Withdrawal acreage does not account for lands recommended for withdrawal by other planning efforts, only those recommended for withdrawal by the Sage Grouse planning effort.)
