Matt from what I have been able to tell the MH_Zoom2FeatureLayer2.js file that the map is looking for no longer exists. I think if you just replace it with a new version it should work. As for where the original file went I don't have any idea as I haven't been on the server in a couple of days and nowhere near that folder.

Sorry, this one is out of my league. Matt do you know what's up with the individual project maps? The full map loads no problem but individual maps load with just the spinning wheel currently. Any idea what might have happened?
