Date:	Tuesday, March 10, 2015 6:11:25 AM
Attachments:	03-10-15 Rangeland Fire report release Final.docx

Hi all,

Below and attached is the final version (minus the link to the report). We are still aiming to send out at 12pm EST, but this version is good for notifications.

Thanks,

Emily

Secretary Jewell Issues Strategy to

Protect, Restore Sagebrush Lands for 2015 Fire Season

Report advances work with Federal, state, Tribal and non-government partners to protect economic activity and wildlife habitat vital to the Western way of life

WASHINGTON, D.C. – Secretary of the Interior Sally Jewell today released the first of two reports developed by the Rangeland Fire Task Force. This initial report includes actions to be implemented by Interior's bureaus to immediately address the threat of rangeland fire to Western sagebrush-steppe landscapes and improve fire management efforts before the start of the 2015 wildfire season.

"Cheatgrass and other invasive species have contributed to making rangeland fire one of the greatest threats in the Great Basin – not only to sagebrush habitat, but to wildlife, ranching, and other economic activities that depend on a healthy landscape," Secretary Jewell said. "As we head into the 2015 fire season, the actions recommended in this report will help ensure that our preparedness, response and recovery strategies better align with the threats facing the West."

Secretarial Order 3336, signed by Secretary Jewell on January 5, 2015, called for the development of a comprehensive, science-based strategy to reduce the size, severity and cost of rangeland fires; address the spread of cheatgrass and other invasive species; and position wildland fire management resources for more effective rangeland fire response. The Order called for the creation of an implementation plan, initial report, and final report. The Implementation Plan, completed on January 31, 2015, established a roadmap to accomplish the objectives of the Order. This initial report released today outlines actions and activities that the Department, in collaboration with our partners and interested stakeholders, can take prior to the onset of the 2015 Western wildfire season. The goal is to protect, restore and conserve vital sagebrush landscapes and productive rangelands, particularly in the Great Basin region of Idaho, Utah, Nevada, Oregon and California.

Many of the recommendations in the initial report draw on the comments received and the ideas generated by the November 2014 conference, "The Next Steppe: Sage-grouse and Rangeland Fire in the Great Basin." The increasing frequency and intensity of rangeland fire in Great Basin sagebrush ecosystems significantly damaged the landscapes relied on by many tribal and local communities, ranchers, livestock managers, hunters, and outdoor enthusiasts. The unnatural fire cycle puts at risk the landscapes that, for generations, Westerners have depended on to sustain their ways of life.

In 2010, the U.S. Fish and Wildlife Service (FWS) found that these developments present a significant threat to the greater sage-grouse in the Great Basin portion of its remaining range. Once occupying more than 290 million acres of sagebrush in the West, the greater sage-grouse, known for its flamboyant mating ritual at sites called leks, has lost more than half of its habitat since then. Settlers reported millions of birds once took to the skies; current estimates place population numbers between 200,000 and 500,000 birds in 11 states and two Canadian provinces. The FWS is now considering whether protections under the Endangered Species Act are warranted.

The recommended actions in the Initial Report involve targeted, strategic investments of Departmental resources to immediately enhance the management of rangeland fire in specific portions of the Great Basin, consistent with the Federal Government's trust responsibility to American Indian tribes, in partnership with states, private land owners and land users, and in cooperation with other statutory requirements and obligations. The recommendations include the following:

- Designing and implementing comprehensive, integrated fire response plans that prioritize protection of the landscapes most at-risk to detrimental impacts of rangeland fire and invasive species. This will include increased training and use of veterans crews, rural and volunteer fire departments, and Rangeland Fire Protection Associations.

- Prioritization and allocation of resources to reflect that this is a critical natural resource and fire management priority for Department agencies and bureaus by emphasizing the need to protect, conserve, and restore the health of sagebrush-steppe ecosystem.

- Accelerating efforts to restore rangelands damaged by wildfire with genetically appropriate plant materials and grasses to help improve the health of this ecosystem.

- Developing a comprehensive strategy for acquisition, storage, and distribution of seeds and other plant materials. Restoration and rehabilitation of the greater sage-grouse habitat areas requires a reliable supply of genetically appropriate and locally adapted seed, as well as seeding technology and equipment for successful and expanded effective restoration of the sagebrush-steppe ecosystem.

- Designing and creating tools and maps to make information on areas of concern, landscape conditions and fire more integrated and readily available.

The Task Force will continue its work through collaboration with Federal, Tribal, state, and local governmental partners and stakeholders to identify and recommend longer-term actions to improve the efficiency and efficacy of rangeland fire management, fire prevention, fire suppression and post-fire restoration efforts at a landscape scale. This long-term report is expected to be delivered to the Secretary by May 1, as called for in the Secretarial Order.

As with the development of the initial report, a draft version of the final report will be shared with Tribes and interested partners and stakeholders with the invitation to review and provide comments. In addition, a Tribal consultation session will be held on April 7 in Reno, NV to hear comments and receive feedback on the draft final report prior to its completion. Dates and information regarding these outreach activities will be posted here.

"These efforts will enable us to more efficiently coordinate and use our existing resources so we can benefit from better science and technological innovations, react more quickly, put our resources where they'll do the most good, and have a more effective impact," said Deputy Secretary Michael Connor, who oversees the Task Force. "This report demonstrates our commitment to working with our partners to reduce the likelihood and severity of rangeland fire, stem the spread of invasive species and restore the health and resilience of sagebrush-steppe ecosystems."

Interior's work to reduce the size, severity and cost of rangeland fires is a key part of a larger, unprecedented federal-state partnership to provide strong habitat protection and conservation measures on public and private lands to protect the greater sage-grouse. More information on the ongoing, collaborative work to conserve the sagebrush landscape is available at www.fws.gov/greatersagegrouse.

Secretary Jewell Issues Initial Strategy to

Protect, Restore Sagebrush Lands for 2015 Fire Season

Report advances work with federal, state, tribal and non-government partners

to protect economic activity and wildlife habitat vital to the Western way of life

WASHINGTON, DC – Secretary of the Interior Sally Jewell today issued the initial recommendations of her Rangeland Fire Task Force to immediately address the threat of

rangeland fire to Western sagebrush-steppe landscapes. The recommendations aim to improve fire management efforts before the start of the 2015 wildfire season.

"Cheatgrass and other invasive species have contributed to making rangeland fire one of the greatest threats in the Great Basin – not only to sagebrush habitat, but to wildlife, ranching, and other economic activities that depend on a healthy landscape," Secretary Jewell said. "As we head into the 2015 fire season, the actions recommended in this report will help ensure that our preparedness, response and recovery strategies better align with the threats facing the West."

Secretarial Order 3336, signed by Secretary Jewell on January 5, 2015, mandated the development of a comprehensive science-based strategy to reduce the size, severity and cost of rangeland fires; address the spread of cheatgrass and other invasive species; and position wildland fire management resources for more effective rangeland fire response. The Order called for the creation of an implementation plan, initial report, and final report. The Implementation Plan, completed on January 31, 2015, established a roadmap to accomplish the objectives of the Order. This initial report[BEJ1], the second outcome of the Order, outlines short-term actions and activities that the Department, in collaboration with our partners and interested stakeholders, can take prior to the onset of the 2015 Western wildfire season. The goal is to protect, restore and conserve vital sagebrush landscapes and productive rangelands, particularly in the Great Basin region of Idaho, Utah, Nevada, Oregon and California.

The increasing frequency and intensity of rangeland fire in Great Basin sagebrush ecosystems significantly damaged the landscapes relied on by many tribal and local communities, ranchers, livestock managers, hunters, and outdoor enthusiasts. The unnatural fire cycle puts at risk the landscapes that, for generations, Westerners have depended on to sustain their ways of life.

In 2010, the U.S. Fish and Wildlife Service (FWS) found that these developments present a significant threat to the greater sage-grouse in that portion of its remaining range. Once occupying more than 290 million acres of sagebrush in the West, the greater sage-grouse, known for its flamboyant mating ritual at sites called leks, has lost more than half of its habitat since then. Settlers reported millions of birds once took to the skies; current estimates place population numbers between 200,000 and 500,000 birds in 11 states and 2 Canadian provinces. The FWS is now considering whether protections under the Endangered Species Act are warranted.

The recommended activities in the Initial Report involve targeted, strategic investments of Departmental resources to enhance the management of rangeland fire in specific portions of the Great Basin, consistent with the Federal Government's trust responsibility to American

Indian tribes and other statutory obligations. The recommendations include the following:

- Developing a geospatial tool that highlights areas of concern in the Great Basin.

- Designing and implementing comprehensive, integrated fire response plans that prioritize protection of the low resilience landscapes that are the most at-risk to detrimental impacts of rangeland fire and invasives. This will include an expanded use of veterans crews by increasing the use of rural and volunteer fire departments and Rangeland Fire Protection Associations.

- Placing added emphasis on the need to protect, conserve, and restore the health of sagebrush-steppe ecosystem, emphasizing that this is a critical natural resource and fire management priority for Department agencies and bureaus.

- Accelerating efforts to restore rangelands damaged by wildfire with native plants and grasses to help improve the health of this ecosystem.

- Developing a comprehensive strategy for acquisition, storage, and distribution of seeds and other plant materials. The spread of invasive species, altered wildfire regimes, habitat fragmentation, and climate change negatively affected many native plant communities and the species that depend upon them. To slow and ultimately reverse these trends in the greater sage-grouse habitat areas requires, a reliable supply of genetically appropriate and locally adapted seed, as well as seeding technology and equipment for successful and expanded effective restoration of the sagebrush-steppe ecosystem.

In the coming months, the Task Force will oversee nine interagency task groups that will work with other federal, tribal, state, and local governmental partners and stakeholders to identify and implement longer-term actions and activities to achieve effective rangeland management, fire prevention, fire suppression and post-fire restoration efforts at a landscape scale. This long-term report is expected to be delivered to the Secretary by May 1, as called for in the Secretarial Order.

“These efforts do not divert needed resources from other places,” Deputy Secretary Michael Connor said, who oversees the Task Force. “They enable us to more efficiently coordinate and use our existing resources, so we can benefit from better science and technological

innovations, react more quickly, put our resources where they'll do the most good, and have a more effective impact. They demonstrate our commitment to work with our partners to reduce the likelihood and severity of rangeland fire, stem the spread of invasive species and restore the health and resilience of sagebrush ecosystems."

Interior's work to reduce the size, severity and cost of rangeland fires is a key part of a larger, unprecedented federal-state partnership to provide strong habitat protection and conservation measures on public and private lands to protect the greater sage-grouse. More information on the ongoing, collaborative work to conserve the sagebrush landscape is available at www.fws.gov/greatersagegrouse.

Secretary Jewell Issues Strategy to Protect, Restore Sagebrush Lands for 2015 Fire Season

Report advances work with Federal, state, Tribal and non-government partners to protect economic activity and wildlife habitat vital to the Western way of life

WASHINGTON, D.C. – Secretary of the Interior Sally Jewell today released the first of two reports developed by the Rangeland Fire Task Force. This initial report includes actions to be implemented by Interior's bureaus to immediately address the threat of rangeland fire to Western sagebrush-steppe landscapes and improve fire management efforts before the start of the 2015 wildfire season.

"Cheatgrass and other invasive species have contributed to making rangeland fire one of the greatest threats in the Great Basin – not only to sagebrush habitat, but to wildlife, ranching, and other economic activities that depend on a healthy landscape," Secretary Jewell said. "As we head into the 2015 fire season, the actions recommended in this report will help ensure that our preparedness, response and recovery strategies better align with the threats facing the West."

Secretarial Order 3336, signed by Secretary Jewell on January 5, 2015, called for the development of a comprehensive, science-based strategy to reduce the size, severity and cost of rangeland fires; address the spread of cheatgrass and other invasive species; and position wildland fire management resources for more effective rangeland fire response. The Order called for the creation of an implementation plan, initial report, and final report. The Implementation Plan, completed on January 31, 2015, established a roadmap to accomplish the objectives of the Order. This initial report released today outlines actions and activities that the Department, in collaboration with our partners and interested stakeholders, can take prior to the onset of the 2015 Western wildfire season. The goal is to protect, restore and conserve vital sagebrush landscapes and productive rangelands, particularly in the Great Basin region of Idaho, Utah, Nevada, Oregon and California.

Many of the recommendations in the initial report draw on the comments received and the ideas generated by the November 2014 conference, "The Next Steppe: Sage-grouse and Rangeland Fire in the Great Basin." The increasing frequency and intensity of rangeland fire in Great Basin sagebrush ecosystems significantly damaged the landscapes relied on by many tribal and local

communities, ranchers, livestock managers, hunters, and outdoor enthusiasts. The unnatural fire cycle puts at risk the landscapes that, for generations, Westerners have depended on to sustain their ways of life.

In 2010, the U.S. Fish and Wildlife Service (FWS) found that these developments present a significant threat to the greater sage-grouse in the Great Basin portion of its remaining range. Once occupying more than 290 million acres of sagebrush in the West, the greater sage-grouse, known for its flamboyant mating ritual at sites called leks, has lost more than half of its habitat since then. Settlers reported millions of birds once took to the skies; current estimates place population numbers between 200,000 and 500,000 birds in 11 states and two Canadian provinces. The FWS is now considering whether protections under the Endangered Species Act are warranted.

The recommended actions in the Initial Report involve targeted, strategic investments of Departmental resources to immediately enhance the management of rangeland fire in specific portions of the Great Basin, consistent with the Federal Government's trust responsibility to American Indian tribes, in partnership with states, private land owners and land users, and in cooperation with other statutory requirements and obligations. The recommendations include the following:

- Designing and implementing comprehensive, integrated fire response plans that prioritize protection of the landscapes most at-risk to detrimental impacts of rangeland fire and invasive species. This will include increased training and use of veterans crews, rural and volunteer fire departments, and Rangeland Fire Protection Associations.

- Prioritization and allocation of resources to reflect that this is a critical natural resource and fire management priority for Department agencies and bureaus by emphasizing the need to protect, conserve, and restore the health of sagebrush-steppe ecosystem.

- Accelerating efforts to restore rangelands damaged by wildfire with genetically appropriate plant materials and grasses to help improve the health of this ecosystem.

- Developing a comprehensive strategy for acquisition, storage, and distribution of seeds and other plant materials. Restoration and rehabilitation of the greater sage-grouse habitat areas requires a reliable supply of genetically appropriate and locally adapted seed, as well as seeding technology and equipment for successful and expanded effective restoration of the sagebrush-steppe ecosystem.

- Designing and creating tools and maps to make information on areas of concern, landscape conditions and fire more integrated and readily available.

The Task Force will continue its work through collaboration with Federal, Tribal, state, and local governmental partners and stakeholders to identify and recommend longer-term actions to improve the efficiency and efficacy of rangeland fire management, fire prevention, fire suppression and post-fire restoration efforts at a landscape scale. This long-term report is expected to be delivered to the Secretary by May 1, as called for in the Secretarial Order.

As with the development of the initial report, a draft version of the final report will be shared with Tribes and interested partners and stakeholders with the invitation to review and provide comments. In addition, a Tribal consultation session will be held on April 7 in Reno, NV to hear comments and receive feedback on the draft final report prior to its completion. Dates and information regarding these outreach activities will be posted here.

"These efforts will enable us to more efficiently coordinate and use our existing resources so we can benefit from better science and technological innovations, react more quickly, put our resources where they'll do the most good, and have a more effective impact," said Deputy Secretary Michael Connor, who oversees the Task Force. "This report demonstrates our commitment to working with our partners to reduce the likelihood and severity of rangeland fire, stem the spread of invasive species and restore the health and resilience of sagebrush-steppe ecosystems."

Interior's work to reduce the size, severity and cost of rangeland fires is a key part of a larger, unprecedented federal-state partnership to provide strong habitat protection and conservation measures on public and private lands to protect the greater sage-grouse. More information on the ongoing, collaborative work to conserve the sagebrush landscape is available at www.fws.gov/greatersagegrouse.
