Subject: Re: MANDATORY READING - December GRSG Monitoring Meeting in Denver
Date: Thursday, November 21, 2013 3:45:28 PM

It seems (seemed) relatively straight forward when I was trying to explain it to some in the group. As long as the population/subpopulations end up as the 39 identified in the COT, I'm guessing they'll be fine with it.

Good luck.

> Not yet. We are meeting with San next week. Basically, I merged the Schroeder current range, the PACs, and the PPH into one layer. We then will overlay that with a subpopulation/population boundary layer and ask the state agencies to adjust the subpopulation/population boundaries to be all encompassing of the merged habitat layer. This way, each parcel of current range, PAC, and PPH will nest within a specific population/subpopulation.

All,
Please, if you have not done so already, familiarize yourself with the GRSG Draft Monitoring Framework before the December meeting. Our goal is to provide more detail to this draft to create a Final Monitoring Framework to insert into the Proposed Plans. We do not have to have a a Final Monitoring Framework by the end of the meeting, but we do have to have the methodology established and a document completed by early January.

Thanks,
Frank
