Yes, we do have it all downloaded but it is by county along with a large number of variables (including the ones you are requesting). We have a Python script that compiles the county-level data into state-level coverage's which we can then push into a filegeodatabase. I have asked Jim Platt to do this but it is not high on his priority list. It will likely be a few weeks.

Best,
Jeff

Jeff and Sharon,

Do you all have the Surgo data downloaded for the sage-grouse states?

Based upon the Knick paper I am looking for these variables.

Soil depth (cm)
Sand (% soil volume)
Silt (% soil volume)
Clay (% soil volume)
Salinity (mmhos/cm)
Available water capacity (cm/cm)
