Ted,

I left a message with Doug Havlina to see if this language was incorporated into the other 4 step-down assessments and if not whether there is still an opportunity to do so.

I follow up with you when I learn more.

Hi all,

To the extent possible can you ensure that the following language taken from the SGB step-down assessment is incorporated into each of the other 4 FIAT assessments?

Paragraph under 4.1.4 Proactive Strategies:

At the time of document preparation, spatial data were not available which portrayed the distribution of non-native, invasive, and/or noxious plant species across the range of GRSG. Therefore, non-native, invasive, and/or noxious plant species need to be inventoried and monitored in each PPA in order to prioritize treatments of these species. Management actions needed in PPAs include: locating infestations, decreasing propagule pressure (especially along roadside areas), treating satellite infestations, and preventing future infestations.

Language to be inserted in every PPA as a project line item:

Under 1st order priority

(Insert PPA Name) Non-Native Treatment: Inventory, treat, and monitor nonnative, invasive species in the PPA.

Thanks - let me know if you have any questions,
