All,

The WAFWA fire report is a status report that summarizes the current state of Fire Operations and Fuels management functions. The intent of this report is to illustrate the type and responsiveness of efforts being made and concludes by presenting future options and a series of recommendations that may inform future policy and allocation decisions.

Similarly the WAFWA invasives report identifies several key challenges and barriers that will significantly affect our ability to effectively manage invasives. The report also makes 11 recommendations that address the issues involved in identifying, describing, managing and resolving the problems associated with invasive plants and their effect on the proper management of the sagebrush-steppe ecosystem.

> Thanks Todd. I'm leaving out the SageSuccess project since that ongoing research rather than documents or efforts focused on identifying science needs/priorities. On the same token, did the WAFWA effort include some kind of identification of science needs or priorities? The way you've written makes me wonder. Also heard a presentation from Ken Mayer today and didn't sound like it. If not, it also shouldn't be included in this plan, or can you clarify. They both will certainly come up when we identify ongoing needs.

Carol,

In the spirit of "keep it short" I added just a few items I was tagged for in track changes.

Todd

Attached is the latest draft of our section. Please review this draft and provide me comments via track changes. You will see I have beefed up some of the sections and added some of you earlier input. I did make an effort to reduce some of the language since I think our section is getting too long. Keep this in mind when reviewing this draft (we should get shorter, not longer) Where possible provide specific edits, rather than just comments. My time is really short this week with attending the North American meetings. **Please send me any comments by March 11, sooner if you have them.**

This draft is for review by our team only. Once I incorporate comments from everyone, we can go out for another review.

Carol
