OK, Lara, thanks.

I believe you meant to say "invasives" should have been included as a Tier 2 threat (not "infrastructure"), right?

I understand that initially we assigned GIS people to authors in their region, which made sense. Now it seems like we're moving into "11th hour mode", so we should think about prioritizing and redistributing the workload. I think that's what I heard from Lief on yesterday's call and from the SLT members this morning.

>> So this is where I'm getting a bit confused/concerned, and hopefully where the Species Lead Team will provide some prioritization and clarity. According to the GIS Analysis Statement of Work document that Kate posted on SharePoint, Wild Horses don't even

make the Tier 1 or Tier 2 cut, while FAA (Infrastructure) is a Tier 2 threat. Shouldn't the priority be to work on the T1 & T2 threats first? None of the threats that I have been working on (disease, invasives or climate change) are listed either, so should I be investing any time in those at all?

Hello Lara, Yes I can see it too.

Thanks.

On another note, I will email the group later today regarding FAA / MET / FCC towers. It does look like we have redundancy and I'll bounce off what I did and what I should do as far as reductions to which data.

They need more work on Wild Horses now and that will take a bit, but hope to get you all some FAA issues info later.

Thanks, Ed

Hi Rich and Ed,

I attempted to add you two to the CED folder permissions in ScienceBase this a.m. I say attempt, because it looked like it was timing out. See if you now have access to the CED folder in the root of the GRSG community, and let me know.

Lara
