Hi Anna,

I don't have any substantive comments to add - looks good, thanks for putting this together!

We discussed and I believe you all wanted an opportunity to provide comments-- beyond scaling down the process flow chart and adding a caveat about how this a simplified version and to find more detailed information on the process visit this website, etc. some way to let folks now that this is a complicated issue and a lot more is going on beyond what's found in this fact sheet.

I've had multiple individuals, even people outside of ES, asking for what's going on with the status review. This would be considered internal talking points, but is in a format that could be shared with partners if necessary,

Hi Dawn and Jesse,

Attached is the new rangewide GRSG breakdown by GIS, using the latest datasets.
NV/CA has already seen confusion in this table and Dr. Pete Coates' GIS data,

I'd like to look at these with you two-- or I can check each state with the field office leads. The data will be used in the GRSG fact sheets.

I want to ensure we are using consistent #s because we've had issues before. Drue DeBerry sent this note earlier and I've included it as background so you all can see where R6 is coming from;

Lara filled me in on what happened with the latest request and Heather M's concern about the GIS product. To avoid future confusion and improve consistency I'm asking the following:

If someone identifies a discrepancy with our GIS products, please contact me. If I'm not immediately available and it is urgent, Kate. The GRSG GIS team is charged with identifying the data that is to be used for GRSG GIS products. The field office folks should check with the team to make sure they are using the correct data. If they have different data, they can propose it to the team for consideration. I'm going to raise this point on the next FMT call.

I'm now asking that the GIS Team to QC the data if it is going to be used for outreach. That will add to the preparation time but will decrease the likelihood of erroneous information.

The need for QA/QC is highlighted in the current request. Some of the data provided by BLM was conflicting and some was missing. That's adding to the time it takes to respond to the request. But we also need the GRSG GIS team to QC how the data issues were addressed.

Bottom line, the more lead time and heads up we have for GIS requests the better. If it is a tight timeline that won't allow for QA/QC we wont' be able to fulfill the request.
