Subject: Re: GRSG: BLM 2/20/15 Delivered ADPP and No-Action Alternative Spatial data
Date: Monday, March 02, 2015 9:49:22 AM

Hi Rich,

I did go ahead and upload the original ID files, because when BLM provided the corrected data updates (content only, not merges), they did not provide a .gdb containing all the fixed feature classes PLUS the original feature classes that were correct as is. Therefore, if we were to use these files, we would need to pull some data from the original ID submittal AND some data from the corrected submittal.

However, **we should not use any of these data yet**, as BLM will be resubmitting it all and more changes to the content itself, as well as having the data merged rangewide, are expected. Regarding a timeline for this, I have heard we may have these corrections by the end of March.

If anyone you are working with has any questions on this, please have them contact their sage-grouse leadership.

Lara

teams. These files were not processed into usable rangewide data sets. BLM has said that they could finish the delivery with merged files by March 31st.

So that I am not the only one able to access these files, and so that we are not reliant on the BLM hard drive, I have put them on ScienceBase in their raw form with no metadata. This way they are available should we determine that, in order to meet specific deadlines, we will need to process the files ourselves. Please note that **at this time no decision has been made regarding if we, or the BLM, should process the files.**

The files are available here to FWS staff: https://www.sciencebase.gov/catalog/folder/54ee6628e4b02d776a684ad0

If we are provided a new delivery from BLM, we can depreciate and remove these raw files from ScienceBase.

Finally, please note that the Idaho ADPP data have not been uploaded, as we have been told that there were errors discovered in the data provided.
