1																						Sighting_Desc: A survey crew consisting of one Redwell GO and 2 crewmachines encountered a polar bear one of the entrance of dens. The bear was noticed at about 210 feet away from the crewmachine working in front of crew at 0.33 um. Approximate location of sight is 70.98 ANW 147.11 SW W. Survey crew was working in the area since 2:00 pm. Bear was observed for 1 hour and 30 minutes. Bear was observed to be in good shape. Final sighting flight at 5 pm on this den site. Done devising of FWO report on site visual monitoring of den from distance. Observation span was limited. 45m. Front approx 50% location during survey encounter. Den was clearly visible from this vantage point. No signs of bear at this time. See more details in comments.	Sighting_Comments: 2:00 - 2:30 pm: Bear was observed outside of the den. From this distance, binoculars were insufficient to see whether any cubs were out of den. At approx 6 pm the Pearl wrangler reported from altitude 2 bears were outside the hole, he was unable to determine size. Bear was observed to interact and follow the bear tracks to the boundary of the den location. Tracks these 2 cubs are accompanying the adult. It is believed that this is the bear who was in the den. All 4 are observed to interact and follow the bear tracks to the boundary of the survey area. The tracks were encountered 1/2 mile from the den and followed to the perimeter of the project area. These coordinates below are that: TR1W 20N 147.11 SW TR1W 20N 147.11 SW TR1W 20N 147.11 SW The general direction of travel from the den was 300 degrees true. At the perimeter of survey area, could barely make out a moving yellow blur that was the bear headed out to sea. At 11:30 am Michelle Gilstein with BP was contacted. It was decided that we could now approach the den to make certain the den was secured. Final sighting flight at 5 pm on this den site. Site and chute were contacted and debrief made. Den location: 70.98.20N 147.10.0E W (FEASIBILITY)
