I have the Schroeder/WAFWA populations from 2004. I do not have any GIS data layers specific to Garton, published by Garton, nor have I seen anything.

For the COT threat ranking, I started with the Schroeder/WAFWA populations and modified boundaries and polygons according to information from the COT and State Representatives (This is what we did at the Reno meeting).

If this doesn't make sense please let me know. Sorry I couldn't help more.

Jim

**Subject:** Garton Population Delineations

**Hi Mike:**

**Would you happen to have a shapefile of the Garton et al. 2011 population delineation? I was going to conduct a brief GIS analysis of the amount of sagebrush habitats burned in the Southern and Northern Great Basin population areas as well as an assessment regarding the amount of mining claims within these areas as partial justification for our threat rankings.**

**Thanks,**
