Subject: Re: GSG 2015, Talking Points for 5/22
Date: Friday, May 16, 2014 10:39:05 AM

Thanks Kate can we make sure all the relevant people on the call this afternoon have the products for discussion purposes. I have a call at 4:00 with Noreen to get her feedback on the agenda.

I think it is important to frame the meeting on what our best proposal is and then have a conversation about some of the specifics as the conversation unfolds. Probably not especially eloquent but some of the things I have been

thinking about.

We want to look at the most important things for conservation be they threats or positive actions
We believe that some independent analysis of certain issues will be necessary . We believe this will require some modelling
We believe that expertise from various sectors (states etc) will be essential to success
We will need a way to bring disparate pieces of information together into a coherent story. We will need some tools to help us do that
Some of these are still undefined and we anticipate enlisting others to help us define
We need to be able to determine the scope of uncertainty and put some boundaries on that
We want to, at the end of the day, provide the decision makers with a reasonable range of scenarios that will provide information on potential abundance and distributions of sage grouse that can then inform the policy decision as to status
We want to and anticipate that we will bring key decision points to the RDs for input and direction along the way.
