I'll post on our restricted space on LC MAP, along with the CO shapefile you sent a few weeks ago.

Lief,

Attached are some additional shapefiles that modified our “population” boundaries.

I wanted to follow-up on last month’s RISCT call – ODFW’s core, low density, and action area shapefiles are available for downloading on our website(http://www.dfw.state.or.us/wildlife/sagegrouse/).

Core = PAC = PPH

Low density is a subset of PGH (PGH would be equivalent to core + low density + COH where COH is current occupied habitat).

COH = PPH + PGH

If there is other info you need let me know.
