I'll call BLM, I have not received the map yet. It shouldn't have taken them too long to produce the map.

Having a discussion on the definitions of No Surface Occupancy and Controlled Surface Use and the restrictions that are related to such designations has helped greatly. I have much more comfort with additional protections that would be afforded greater sage-grouse due to these prescriptions in the Lander plan, even though they were not specifically created to protect sage-grouse. These protections will probably protect sage-grouse beyond what would be protected by the State of Wyoming's Core Area Strategy alone.

request a map from you if possible. The shape files I would like to see layered in the map would include; The Lander RMP boundary, areas that are closed, areas that have No Surface Occupancy, areas that have the following Controlled Surface Use - CSU restrictions in areas with limited reclamation potential soils, surface occupancy or use restricted on slopes between 15 and 24 percent, and within important scenic areas (VRM Class I and II areas), and finally the Core Areas. This map will help demonstrate the geographic coverage of these various restrictions on the Lander planning area.

Thank you again.
