Hi Kevin,

I have friends who live in Evergreen and really like it. Congratulations!

I am hoping to get started on the pipit/wind analysis that Bridget asked for. Do you know if Sean was going to be able to get that to me this week? I am happy to interact with him directly, if you'd like.

The link above may be a source of fire potential data that we could either use "as is" or update by removing areas already burned, etc. After overlay with a SG population layer, we could get at risk to SG from wildfire. This is the layer we used in the Mainer et al. report I gave you and it looks like the methodology has been published in: *Finney, M. A., C. W. McHugh, I. C. Grenfell, K. L. Riley, and K. C. Short. 2011. A Simulation of Probabilistic Wildfire Risk Components for the Continental United States. Stochastic Environmental Research and Risk Assessment 25:973-1000.*
