Hi Renee,

That works for me. I'm swamped by another project until then anyway. I got your comments on the meeting summary from Kevin and will incorporate them. I left the sage-grouse mitigation plan open a bit in the FLA, to account for various unresolved issues, questions, etc. I tried to make it very clear though that construction of a licensed project would not proceed until we have a detailed plan for monitoring and mitigation projects, that has been approved by the various agencies, and funding for mitigation is in place. Sound good to you?

I'm looking forward to working together over the next couple of years to figure it all out!

Regards,
Nick

Hello Nick,

Sorry for the delay in getting back to you on sage-grouse mitigation ratios. I have gotten a ton of feedback from various FWS offices and need to go through it all. Hopefully I will be able to get back to you on that in early December.

Thanks!!

Renee
