Do you have access to the I drive? If so, there is a directory called GIS/Data that this would go under. I would probably put this data into the Demographic subcategory, but Todd, weigh in if you disagree. We store data in subfolders under these broad categories by where they came from, so make a new folder called "TNC" under Demographic, or whatever category you determine is correct.

Then, use this spreadsheet to track that you have added the data and where, and add a few pieces of info to the spreadsheet. **I:\GIS\DATA\Guide_to_Data.xlsx**

I will work on adding these data to LC MAP as we go, but we'll want them locally for processing anyway. Note that the way I use this directory is to put input data that may be useful for many projects into the data folder, but then add derived data within the Projects folder, using the templated directory structure found here: I:\GIS\PROJECTS\#YearMoDy_Staff_Loc_Cust_Desc#, which is copied and changed to indicate the project.

Thoughts Todd?
