---

yep, you sent me the Falcon Gondor report. So far I've collected 9 transmission line citations - 6 show effects to grouse and 3 conclude no effects. None are entirely robust, and most (all?) don't do pre- and post-project evaluations. However, in my mind it seems there is at least some info out there that shows something is going on.

Thanks for digging up the Flake report for me.

Laura.

Also, have you see the final Falcon-Gondor report? Its a transmission line in central NV and they have done 10 years post-construction relative to impact on grouse. I've not had the chance to read it yet, but the interim reports were inconclusive at best. I will send the link.
