Hi Mike, wanted to know if you've had an opportunity to confer with anybody regarding the addition of the sage-grouse PACs to IPaC. To be clear, we are talking about the greater sage-grouse Priority Areas for Conservation (PACs) recently identified by the Conservation Objectives Team and published in a FWS report. The PACs are shown several times in the report and the map below is available on the R6 website, so this information is already public- we want to add the PAC polygons to the interactive IPaC mapper. The primary difference is that the public would be able to get more precise locations of the PACs than they can from the print map. From my perspective, this is a good thing, but I recall Jim L. saying that some states or other agencies may not necessarily agree.

I've cc'd Jim since he was involved with the COT and may have additional info since the last time we talked.
