David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Marianne Krist

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Carole Sime

But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for Florida Panthers, please do not downlist or delist panthers from Endangered Species Act protection. We need to do what we can to protect these amazing animals. This is your state mammal, the symbol for one of your university's sports team, and an NHL franchise. They are rare and beautiful and need protection. They must not be delisted, and must keep their endangered status. The next time I visit Florida, I want to be able to hear that Florida Panthers are protected.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Thomas Ikalainen

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Michael Davis

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mrs. Gerri Paniccia

Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Donna Hilliard

Having visited Florida for a short vacation in April and travelling on Hwy 29 to Everglades City with all the panther caution signs, I wanted so badly to see one (alive) but we saw a dead one instead. Experiencing how fast people were driving on that road, despite the 45mph speed limit and caution signs (for armadillos, too), that speed needs to be drastically reduced to protect the panther.

Thank you.

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Kathleen Kendrick

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mrs. Donna Mulvey Gieber

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Dr. Michael Vilbert

Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mrs. Janet Peterson

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Bob and Carolyn Primiano

First off, thank you very much for taking the time to read my letter. I know you have a very busy schedule and you probably receive a LOT of letters similar to mine, so I really am grateful of your time. During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Jennifer Buhinicek

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. james heermans

The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Robert Panza

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Curt Johnson

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Gary Massing

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Edith Orner

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Judith Bruder

But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

All animals in the wild are in fact endangered. Life span is limited and the dangers are manifold.

The Florida Panther is among these wild and beautiful creatures.

Please review this petition and give it careful consideration.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Judy Chesnutt

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Kortney Ventimiglia

The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mrs. Leona Coen

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Miss Dinorah Ramos

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Marcy Hagen

I grew up in Florida and have always appreciated Florida's unique environments. What a diverse and beautiful state. So many of Florida's animals are threatened by development and over-use of the land and water by people. Please help to protect this unique animal in its habitat.

Right now, with this administration, federal agencies that are supposed to protect our environment and animal life seem to be working against improvement and preservation. Please don't be part of that trend.

Thank you.

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Dr. Carmen Macias

Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mrs. Tracy Cook

Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Scott English's
725 Bayside Dr

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Randye Brauntuch

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Jody Coakley

The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mrs. Amy Elepano

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection. We need to ensure that they survive.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Jacqueline Bishop

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Dr. Rosalie Winard

The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Vlad Valentin

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mrs. Tami Lesser

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Deanna Peterson

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Jeffrey Barclay

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Dawn Simmons

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Bonnie Roscinski

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

Panthers are barely holding on outside of the Pacific Northwest - their populations in the east, especially those in Florida, must be protected at all costs. Our ecosystems are already so unbalanced and can't afford to lose another major species. There is no reason to delist panthers from the ESA, and every reason to keep them on it. I think if you look at the facts, and look in your heart, you'll see we need to protect these creatures as long as possible.

Thank you.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Their very existence hangs in the balance, as does so much of our wildlife worldwide.

Thank you.

Sincerely,

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. susan gruca

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Paul A

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection. In this era of the destruction of the norms we have become accustomed to with the Endangered Species Act, it is more important than ever to protect the iconic animals we love for our childrens' inheritance.

Thank you.

Sincerely,

Mrs. Joyce Pike

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. John Burridge

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Juan Carlos Oliveros

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Cynthia Wilder

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Maria Reis

The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Dr. Darlene Antonio

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

There are so few panthers left, and they face so many challenges. As a person from Miami, it is especially important to me that the Florida panther is protected. They are an iconic species and should always be a part of Florida!

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Carrie Holbrook

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Chris Chesire

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Societies are evaluated within the lens of how they treat their wildlife. This species lived in this environment long before human habitation and long before our human "progress" began to impact its survival. We need to make certain that it is entirely secure before we downgrade its protection. This is a small group of pumas and for them to survive and be healthy, each member is needed for best genetic diversity.

We have a duty of care, an ethical and moral obligation to do what is right. This is not a decision that should be decided by mere financial cost. The cost of losing a species cannot be measured. Apart from a species right to exist, from a purely practical perspective, this particular species characteristics, abilities and adaptions can be studied, learned from, for greater good. Scientists are continually developing new tools and treatments based upon the intelligence and adaptations of animals. The loss of the pumas "individual intelligences", may be a profound loss indeed.

Examples of other cats in peril include cheetah, an African cat. But, scientists have discovered that there is no hope of saving them, The genetic pool is too small and their own particular breeding habits (they are very selective - a trait which served them well for thousands of years) complicates the question of their survival. Added to this,

feline leukemia or other diseases, can easily wipe out the remaining few animals.

Please tell the U.S. Fish and Wildlife Service that they are here to protect and serve the best interests of the fauna and flora of the US, please do so.

Florida, please do what's right, you don't want to be the state that protects the rights of imaginary animals like Mickey Mouse, but betrays the rights of living ones !

Thank you!

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Tiffany Leger

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection. safeguarding panthers as a crucial player in maintainnig a balanced ecosystem protects us all

Thank you.

Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Alison Pachovas

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mrs. JANET Souza

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection. I don't know how you cannot protect these animals. Especially when a school chose the panthers to be the state animal. You nuts?? Don't be stupid. Help save and protect the panthers.

Thank you.

Sincerely,

The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mrs. Karen Magenheimet

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Tina Cozzolino

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Brad Brisard

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mrs. Tracey Mason

Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Lisa Bennett

The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Miss Maddie Monday

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Paola Calvillo

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Margery Zimmer

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Suzanne Jadwin

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. JEFFREY MORELAND

The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Justin Ballard

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Mia Mantini

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mrs. Joanne Prine

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Rolf Steinbrunn

Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Carrie Wiebe

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Bethany Lester

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Cynthia Loucks

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mrs. Teresa Geeslin

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.
Being an avid outdoorsman and animal lover, I would really do anything to save more Florida Panthers, rather than allow more of them to be killed by removing them from strict protection. Please do not make that selfish mistake. Being a resident of Texas, I only wish we could have the Ocelot make as much progress as your Panther, so please don't ruin a blessing for our future generations and those of the Florida Panther as well.

Thank you.

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Yvette Richey

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mrs. Beverly Garcia

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Dr. Alison Bateman-House

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Joe Suarez

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mr. Andrew Wright

Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Ms. Heather Payne

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection. Whatever creative things you can do to help protect these iconic animals you should do. Your efforts will not be in vain I'm certain.

Thank you.

Sincerely,

Mrs. Suzanne Wright

Aug 8, 2017

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mrs. Malorie Mikolowski

During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Florida panthers need to be on the Endangered Species Act for some time to come. Please do your part to ensure that they are protected from hunters.

Thank you.

David Shindle, U.S. Fish and Wildlife Service

Dear David Shindle, U.S. Fish and Wildlife Service,

Panthers are so iconic in Florida that they were chosen by school children to be the state animal. They deserve our respect and our protection. Federal protection remains essential, as turning management over to the state and increasing the use of lethal management would cause the species to once again be in danger of extinction after slowly building their numbers throughout the years.

Their current status does not meet the standards set by the Endangered Species Act to downlist or delist them. Panther conservation must be re-doubled to prevent their jeopardy. The progress made in reviving their population should not be prematurely dismantled now. Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

I am begging you to save them and ADD MORE protections!!!!!!! During the five-year review for this species, please do not downlist or delist panthers from Endangered Species Act protection.

Thank you.

Sincerely,

Mrs. J Swanson

Unlike all other mountain lion subspecies, Florida panthers are specially adapted to their Big Cypress Swamp and Everglades habitats. But they are increasingly threatened by climate change, habitat loss and road development. We must ensure their safety and survival if they are to persist for future generations.

Please don't downgrade the classification of this native animal. As a Florida natiive we cherish these animals, and I watched for years for them to regain in numbers. Please don't let that progress be wasted. Thank you.

Sincerely,

Mrs. JEAN HILL
