

Batch 4 Final Site Plan Requirements

Prior to the Service's issuance of an Incidental Take Permit you must provide a final survey and site development plan of the property, encompassing the entire project site, prepared by a duly licensed land surveyor of the State of Alabama, which shows all property boundaries, the coastal construction control line (where applicable), and the proposed location of all improvements or structures; including, but not limited to, the residence, decks, stairs, dune walkovers, pools, roads, driveways, parking, fences, or outbuildings. The survey must be exactly the same as will be used to obtain your building permit from the City of Gulf Shores or Baldwin County.
