

Form sGnRHa/Ovaplant-3: Results Report Form

For Use in sGnRHa (Ovaplant®) Clinical Field Trials Conducted under sGnRHa INAD 11-375

INSTRUCTIONS

- Investigator must fill out Form sGnRHa/Ovaplant-3 no later than 10 days after completion of the study period. Study Number must be recorded on all pages of Form sGnRHa/Ovaplant-3. Attach lab reports and other information.
- If salmon gonadotropin releasing hormone analog was not used under the assigned Study Number, fill out only the Site Information portion on this page, and skip to the end of page 3 and fill out only the "Negative Report" section.
- Investigator should keep the original on file, and send a copy to the Study Monitor. Within 10 days of receipt, the Study Monitor should send a copy to the Bozeman NIO for inclusion in the permanent file.
- Note:** Both Investigator and Study Monitor should sign and date Form sGnRHa/Ovaplant-3.

SITE INFORMATION

Facility	
Reporting Individual	

FISH CULTURE AND DRUG TREATMENT INFORMATION

Drug lot number		Total amount drug used (mg)	
Fish species treated		Water temperature (°F)	
Drug dosage - males (ug/kg body wt)		Drug dosage - females (ug/kg body wt)	
Average fish weight (gm)		Average fish length (in)	
Number of treated males		Number of treated females	
Number of control males		Number of control females	
Treatment date(s)			
Treatment method	Pellet Implant	Pellet size (i.e., ug sGnRHa per pellet)	
Number of pellets per male		Number of pellets per female	
Spawning/evaluation interval (time from treatment until spawning)		Spawning/evaluation date(s)	

sGnRH_a/Ovaplant® Results Record - Females

INSTRUCTIONS

1. "Ripe" females are those fish that have ovulated or released their eggs. "None-ripe" fish are the converse.
2. Use additional copies of Results Record for additional fish treated.

Be sure the facility name is written here: _____

		sGnRH _a TREATED FISH - Females					CONTROL FISH - Females

* If eggs from multiple females have been combined during incubation, indicate data from combined egg lots with a vertical line "connecting" all females contributing to a single egg lot

sGnRH_a/Ovaplant® Results Record - Males

INSTRUCTIONS

1. "Ripe" males are those fish that are actively spermiating. "None-ripe" males are the converse.
2. Use additional copies of Results Record for additional fish treated.

Be sure the facility name is written here: _____

		sGnRH _a TREATED FISH - Males					CONTROL FISH - Males

RESULTS: Describe in detail treatment results. Was treatment successful? If treatment did not appear to be successful, explain why not? Were there any mitigating environmental conditions that may have impacted treatment results? Were there any deviations from the Study Protocol? Attach pathology reports; Both Pre-and Post-Treatment.

Toxicity observations: Report any apparent drug toxicity including a description of unusual fish behavior.

OBSERVED WITHDRAWAL PERIOD OF TREATED FISH:

Observed withdrawal period :

Fish treated with sGnRH_a (Ovaplan[®]) may not be stocked, released, or harvested for human consumption. All treated fish must ultimately be destroyed. Investigator should initial here to indicate compliance with disposition requirements of sGnRH_a (Ovaplan[®]) treated fish

_____ **NEGATIVE REPORT** Salmon gonadotropin releasing hormone analog (Ovaplan[®]) was not used at this facility under this Study Number during the reporting period. (Investigator should initial for negative reports as soon as the Study Number is known to be no longer needed or valid.)

Date Prepared: _____ **Investigator:** _____

Date Reviewed: _____ **Study Monitor:** _____

sGnRH_a Treatment Summary Information - Females

(To be completed by the NIO)

Treated Females							
Fish #s	Number of fish	Date Treated	Date Evaluated	Interval between treatment and evaluation (specify hours or days)	% Ripe	% Eye-up	% Hatch

Control Females							
Fish #s	Number of fish	Date Treated	Date Evaluated	Interval between treatment and evaluation (specify hours or days)	% Ripe	% Eye-up	% Hatch
