

Form MT-5: Transfer Record of MT-treated Fingerling Tilapia Under MT INAD 11-236

INSTRUCTIONS

1. Form MT-5 must be completed by Investigators for all sales of MT-treated fingerling tilapia to other producers for grow-out of fish to market size. The purpose of this form is to formally establish that all purchasers of MT-treated fingerling tilapia are aware of, and agree to comply with, the FDA-mandated withdrawal period(s) that must be observed before MT-treated tilapia may be slaughtered for processing or released for possible human consumption.
2. This form should be completed and signed by both the Investigator and purchaser **prior** to the transfer of fish.
3. The original should be returned to the Investigator and maintained on file. Within 10 days of fish transfer, the Investigator should send a copy to the AADAP Office for inclusion in the permanent file.

INVESTIGATOR (i.e. seller) INFORMATION

Investigator	John Doe		
Facility	Tilapia Farm A		
Number of MT-treated fingerlings transferred	100,000	Transfer date	9/18/08
Treatment dates (i.e., start date - end date)	8/10/08 - 9/6/08	Study Number Corresponding to MT-treated fingerlings	11-236-08-XXX

PURCHASER (i.e. buyer) INFORMATION

Name of purchaser	Josey Jo - Facility B		
Facility address	555 Tilapia Rd Somewhere, ID 22222		
Phone Number	555-555-5550		

As described in the FDA-approved Study Protocol for MT INAD 11-236:

a.) **The investigational withdrawal period for fish reared under a batch culture regime will be 120 days.** Batch culture is defined as when all fish in a group/lot enter and leave the lot at the same time (sometimes referred to as “all in/all out” culture). In batch culture a defined group of similar age/size fish are stocked simultaneously for a prescribed grow-out period, which is followed by a complete harvest of the production unit. This withdrawal period is determined based on the last day of treatment with 17-alpha methyltestosterone medicated feed.

b.) **The investigational withdrawal period for fish reared under partial harvest/restock culture will be until such time that harvested fish reach an individual minimum weight of 350 g.** Partial harvest/restock culture is defined as the mixing of different lots of fish during the grow-out period, and the selective harvest of fish from the production unit at various times.

The purchaser acknowledges his/her responsibility to comply with the above-stated withdrawal periods:

Purchaser: Josey Jo **Date:** 9/18/05

Investigator: John Doe **Date:** 9/18/05
