Fish and Wildlife Conservation Offices –

Cooperating with Native Americans

CONSERVING
NATIVE AMERICA'S
Fisheries
and
Wildlife

SW/ST

Tribal law enforcement officers learn techniques during USFWS, LE training.

Native American ties to the land and its resources have a long and rich tradition. Within Region 6 there are 35 reservations that encompass more than 15.5M acres. Fish and Wildlife Conservation Offices work cooperatively with Tribal governments to fulfill trust responsibilities. We assist in managing natural resources, restoring habitats, restoring native species, recovering threatened and endangered species, and providing training and cooperative education opportunities.

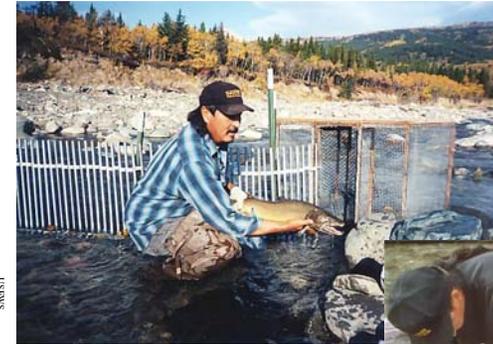

US/ST

Sage Grouse, a species of concern, are monitored on the Wind River Reservation in Wyoming using radio telemetry.

Dick Bales

The future of fish and wildlife management on Tribal reservations.

US/ST

Recovery efforts are under way on the Blackfoot Reservation for the only US population of bull trout found east of the Continental Divide.

SW/ST

Young elementary students receive a biology lesson during annual gill netting on the Wind River Reservation.

SW/ST

Young Cheyenne dancers learn about prairie dogs and black-footed ferrets in the prairie ecosystem.

SW/ST

Blackfooted ferret release on Northern Cheyenne reservation lands in Montana in 2008.
