SPECIAL NOTE

This document was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Wetlands were identified on the photographs based on vegetation, visible hydrology, and geography in accordance with **Classification of Wetlands and Deep Water Habitats of the United States** (Cowardin, et al., 1977). The aerial photographs typically reflect conditions during the growing season at the time when they were taken. In addition, there is a margin of error inherent in the use of aerial photographs. Thus, a detailed on the ground and historical analysis of a single site may result in a revision of the wetland boundaries established through photographic interpretation. Small wetlands may be excluded from this document and those obscured by dense forest cover may not be included on this document.

Federal, State and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no intent, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, State or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, State or local agencies concerning specific agency regulatory programs and proprietary jurisdictions that may affect such activities.

NOTES TO THE USER

- Wetlands which have been field examined are indicated on the map by an asterisk (*).
- Additions or corrections to the wetlands information displayed on this map are solicited. Please forward such information to the address indicated.
- Subsystems, Classes, Subclasses, and Water Regimes in *italics* were developed specifically for NATIONAL WETLANDS INVENTORY mapping.
- Some areas designated as R4SB, R4SBw, OR R4SBJ (INTERMITTENT STREAMS) may not meet the definition of wetland.
- This map uses the class Unconsolidated Shore (US). On earlier NWI maps that class was designated Beach/Bar (BB), or Flat (FL). Subclasses remain the same in both versions.

Other information including a narrative report concerning the wetland resources depicted on this document may be available. For information, contact:

MODIFIERS

In order to more adequately describe wetlands and deepwater habitats one or more of the water regime, water chemistry, soil, or special modifiers may be applied at the class or lower level in the hierarchy. The special modifier may also be applied to the ecological system.

WATER REGIME

Non-Tidal	Tidal
A. Temporarily Flooded	G. Permanently Flooded
B. Saturated	H. Intermittently Flooded
C. Seasonally Flooded	J. Intermittently Exposed
D. Semipermanently Flooded	K. Artificially Flooded
E. Seasonally Flooded/Saturated	L. Subtidal
F. Temporarily Flooded/Saturated	M. Irregularly Exposed
G. Intermittently Exposed	N. Regularly Flooded
H. Permanently Flooded	P. Irregularly Flooded
J. Intermittently Flooded	
K. Artificially Flooded	

WATER CHEMISTRY

Coastal Halinity	Inland Salinity	pH Modifiers for all Fresh Water
1. Hyperhaline	1. Hyperhaline	1. Acid
2. Euhaline	2. Euhaline	2. Circumneutral
3. Mixohaline (Brackish)	3. Mixosaline	3. Alkaline
4. Polyhaline	4. Fresh	
5. Mesohaline		
6. Oligohaline		
7. Fresh
