

### Science update for TAMWG

A preliminary fiscal year 2015 science workplan has been prepared and integrated into the proposed budget. The development process:

1. A prioritized list of FY 2015 TRRP projects was developed based on input from individual technical workgroups. Each workgroup developed a list of priorities based on assessments included in the IAP, or refinements to means objectives and metrics resulting from the May 2013 Objectives Workshop, as well as recent learning.
2. The Science Coordinator and Executive Director integrated activities across groups and compiled the results in a single prioritized list (Appendix A of the TRRP FY 2015 investigation plan solicitation).
3. Project teams submitted investigation plans.
4. All investigation plans are undergoing administrative review. Selected investigation plans will also undergo external scientific review as deemed necessary.
5. The SAB now has the opportunity to evaluate the entire proposed body of work and to provide input to the TMC.

The Science Advisory Board's Phase 1 Review was circulated on May 29, 2014 (*covered under "Phase 1 Review" item on the TAMWG agenda*).

The IDT has been focused on the refinement of objectives, the developing scenarios for the fish production model, and implementation of the 2D hydraulic model. Now that the Phase 1 Review has been released, the group is charged with implementing the recommendations under the guidance of the TMC (*IDT activities are covered under "Update from TRRP workgroups" item on the TAMWG agenda*).

The Fish workgroup and Design Team members have worked to resolve conflict in implementing the hatchery reach channel rehabilitation project by soliciting input from three independent outside experts. Given divergent internal and external technical input, technical staff is seeking TMC guidance on the path forward (*Fish workgroup and Design Team activities are covered under "Update from TRRP workgroups" item on the TAMWG agenda*).

Information is being developed to support a gravel augmentation permit renewal (*Gravel Augmentation workgroup activities are covered under "Update from TRRP workgroups" item on the TAMWG agenda*).
