

-  Project Boundary
-  Grading Contours
-  Area of Disturbance - 1069.36 Acres
-  Native Grassland Mitigation (18.05 acres)
-  Coastal Sage Scrub Mitigation (205 acres)

Note: Coastal sage scrub and native grassland mitigation acres shown on this exhibit represent mitigation opportunity areas within Prima Deshecha Landfill that are outside the limits of existing and future landfill and/or roadway construction disturbance limits and are based on a gross impact assessment for these facilities. IWMD and RDMD will only create habitat acres needed to fulfill their department's impact obligation at a maximum ratio of 1:1. For these reasons, the creation of actual mitigation areas required to fulfill these mitigation obligations will likely be less than is shown in this exhibit.

County of Orange Mitigation
