

## Migration Basics

What is migration?

How did ancient civilizations explain migration?

Name three adaptations other than migration animals use when the habitat they live in is difficult to survive in year round.

What is the most common reason to migrate?

Give an example of lack of food making migration necessary.

Give an example of temperature making migration necessary.

Give an example of predator threat making migration necessary.

Define and give an example of seasonal migration.

Define and give an example of latitudinal migration.

Define and give an example of altitudinal migration.

Define and give an example of reproductive migration.

Define and give an example of nomadic migration.

Define and give an example of removal migration.

Define and give an example of complete migration.

Define and give an example of partial migration.

Define and give an example of irruptive migration.

Can a species migration pattern include more than one migration type?

List four cues that initiate migration.

1.

2.

3.

4.

List four key facts about animal navigation.

1.

2.

3.

4.

List three adaptations birds have for long distance migration.

1.

2.

3.
