

Map Your Trail Cam Photos Online!

Instructions are included to help users geo-tag their photographs and view them on an online, **interactive map**. By adding their geo-tagged photos to the **School Trail Camera Photos Group**, they'll contribute to a geo-spatial database, displayed on an online map, that illustrates biodiversity and wildlife variation across a broad geographic area.

Students can view photographs from other schools and add their trail camera photographs to an interactive online map.

Mapping trail camera photographs integrates nature with technology and helps students to visualize wildlife diversity.
