Glad you will be able to make it.

We are just walking transects to locate eelgrass, GPS, and record metadata (e.g., number of plants, proximity to other patches, etc). Transect widths will depend on lighting. Since we will be surveying at an extremely low tide, it probably makes the most sense to meet at the Refuge and drive out.

I think we have some interns from CWI that will also be assisting us. I'll let you know if we need more folks.

Good morning Jennifer,

I will be there for sure with one other JST staff. Do you need additional participants? Also we can arrive by skiff if that is easier?

Also, what methods will we be using?

Ralph

Ralph,

As we discussed previously, we will be conducting a presence/absence survey for

eelgrass on July 1. We will meet at 6am at the entrance to Voice of America Rd (Dungeness NWR and Dungeness Recreation Area Entrance).

Let me know if you would like to join us.
