---

The overall information seems to be there but there are a few details that might need spelling out. belt transect may need to be defined as we did it. Like we do the invasives grid using track log to navigate and insure coverage. We had the map on the trimble units, which can also be identified as equipment used, and projects the lease boundary. If you need more let me know.

Hiya!

The tribe has this document about the eelgrass methods from the 2016 survey. Can you review and expand on the info (if necessary)?
