Humm, it would be in with her GIS work which takes a loooooong time to bring up on Pulse Secure. You might look in the GIS Projects folder under Julie. There may be a pdf there. Or look on her desk - you could at least scan it...

Attached is the rundown of waterfowl that will eat eelgrass (you could note up to 20k for the briefing) or Herring which rely on it for productivity (they lay eggs on it; 43 tons in 2012). If those fisheries folks are worth their salt, they've been yammering at her about the steep decline in stocks...

Did Julie make a pdf of the eelgrass map? I am only seeing copies of the shorebird/waterfowl map. I think that map is so cool (fall-down cool) - I wanted to share it with Charlie.
