

Field Trip Reflection

Draw your favorite moment from your visit to Kīlauea Point National Wildlife Refuge.

What surprised you about your visit?

Mōlī (Laysan Albatross) Life Cycle Learning Journal

Student Ornithologist: _____

**What I KNOW
about albatrosses**

**What I WONDER
about albatrosses**

**What I LEARNED
about albatrosses**

Marine Debris

We have created so much marine debris that...

Solutions!

Bolus Data Collection

Object	Quantity	Manmade (Y/N)

Lesson One:

Seabird Basics

I can explain how seabird **adaptations** help mōlī survive in their **habitats**.

Bolus Dissection

Mōlī chicks regurgitate a bolus prior to fledging. A bolus consists of indigestible material from meals a chick has been fed by its parents.

Initial observations:

Bolus content predictions:

1. _____
2. _____
3. _____

Description or scientific illustration:

A large, empty rectangular box with a black border, intended for a description or scientific illustration of the bolus.

Lesson Three:

Bolus Dissection and Marine Debris

I can propose a **solution** to **human-caused** marine debris. I can make a claim about how that solution will help decrease marine debris and where it will fall short.

Scientific Illustration

A scientific illustration includes a **title** and **labels** of the organism's components, or parts. Draw a scientific illustration of your favorite bird.

Title

Mōlī Illustration

Place the terms from the provided list into the corresponding labels.

Webbed feet

Feathers

Tube-nose

Salt gland

Hooked beak

Air sacs

Lightweight bones

Oil gland

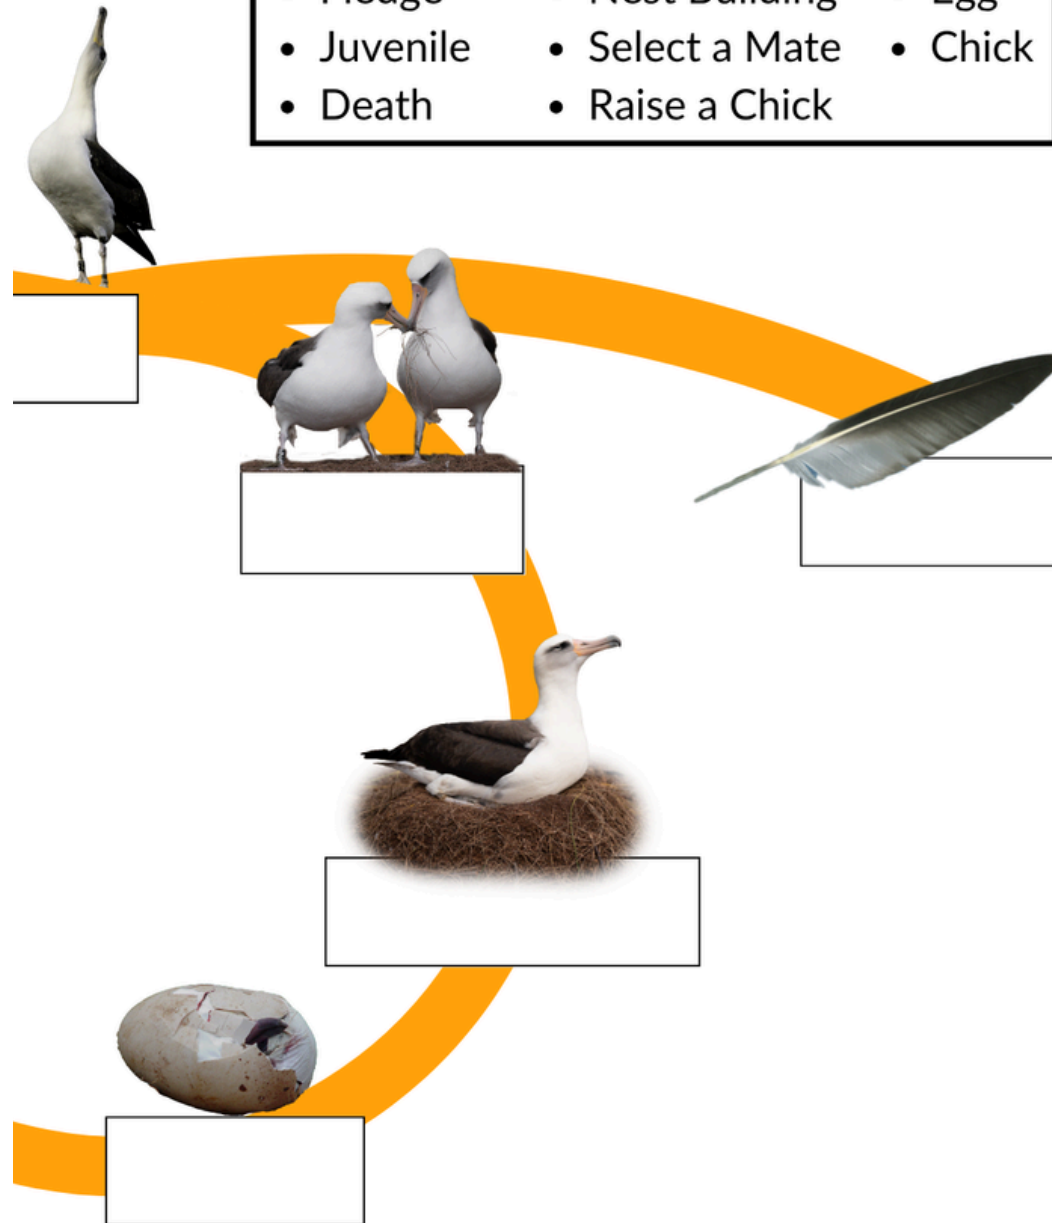

Albatrosses are seabirds and spend most of their life on the ocean. They do not need access to fresh water because they have **salt glands** that filter salt out of their bodies and excrete it through their **tube noses**.

Most birds have **lightweight bones** so it is easier for them to fly.

Webbed feet help albatrosses to take off from the surface of the ocean.

the name of the part of the life cycle with its image:

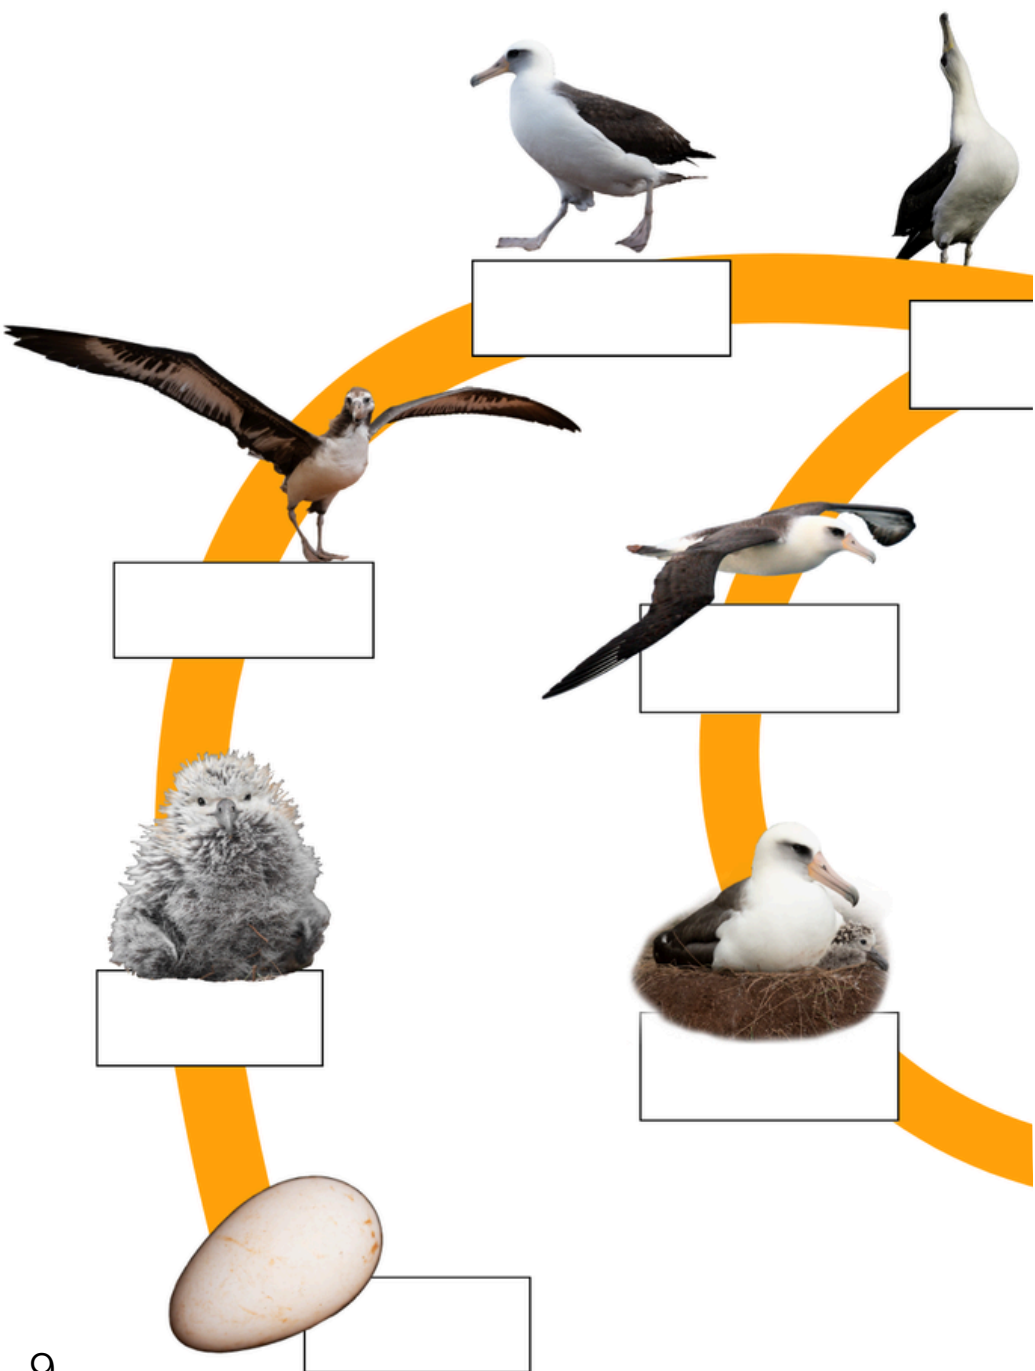

- Live at Sea
- Egg Incubation
- Pip
- Fledge
- Nest Building
- Egg
- Juvenile
- Select a Mate
- Chick
- Death
- Raise a Chick

Mōlī Life Cycle

Match

Mōlī

Lesson Two:

Colonies and Courtship

I can explain how living in a colony while on land helps mōlī survive.

I can make a model of the mōlī lifecycle and describe what makes it unique from other animals.

Mōlī Courting

Dance Move	Count
The Stare	
Bill-under-wing	
Sky-call	
Bow-clapper	
Bob-strut	

I observed that....
