

To Whom It May Concern:

ESA Construction is proposing to expand a gravel parking lot at 110 S. Amity Road in the City of Conway, Faulkner County, Arkansas. GPS coordinates for the site are 35.076026, -92.411143.

The parking lot will be expanded by 0.5 acres. The property we are proposing to develop has been previously cleared, and is currently an empty field with no trees. Ground disturbance will occur as we need to level the site before gravel is added. Best Management Practices to minimize sedimentation runoff will be put in place.

The U.S. Fish and Wildlife Service lists the Interior Least Tern and Piping Plover as potentially occurring within the project area (IPaC # 04ER1000-2016-SLI-0000). After reviewing the life history information for both these species, we determined that this project may affect, but is not likely to adversely affect the Interior Least Tern or Piping Plover. We are not modifying/affecting habitat for these species, as they use primarily open sand or gravel and small waterbodies, neither of which are present within the project area. We are requesting USFWS concurrence with this determination.

I have included an aerial photograph with the project area delineated.

Thank you,

Project Manager
