

U.S. FISH AND WILDLIFE SERVICE

Caribbean Endangered Species Map

Mapa de Especies Caribeñas en Peligro de Extinción

Puerto Rico

U.S. Virgin Islands

U.S. FISH AND WILDLIFE SERVICE

Caribbean Ecological Services Field Office

DISCLAIMER: The Endangered Species Map is provided as a tool for developers, consultants, land management agencies, resource agency staff and the general public as a quick reference for the evaluation of possible effects that may result from development projects. The information provided in this map identifies general areas where the species may be located. The information does not represent the absolute distribution of a particular species. The map and table were developed with the best information available to the Service, but additional sightings of the species may occur. If the project is located within the currently known distribution of a species, additional information may be required to determine the presence of suitable habitat within the project area, and in some cases, specialized surveys may be required to determine presence/absence of the species.

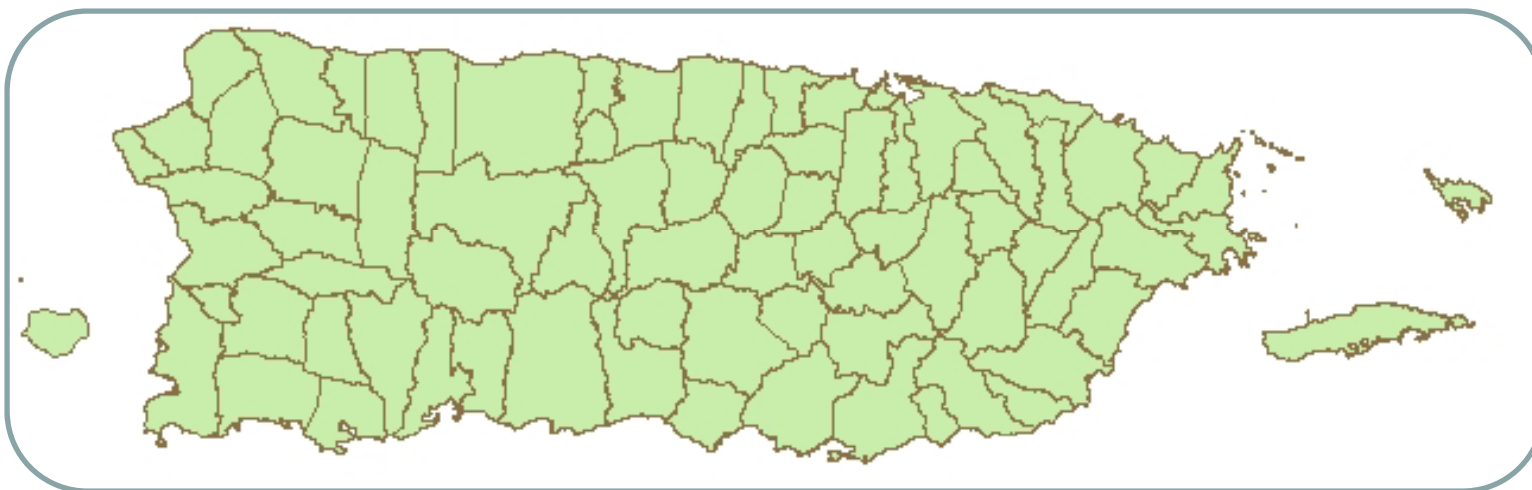

Aviso legal: El mapa de especies caribeñas en peligro de extinción se ofrece como una herramienta para los desarrolladores, consultores, agencias de manejo de tierras, personal de agencias de recursos y al público en general como una referencia rápida para la evaluación de los posibles efectos que pudieran derivarse de los proyectos de desarrollo. La información proporcionada en este mapa identifica las áreas generales donde la especie se encuentra. La información no representa la distribución absoluta de una especie en particular. El mapa y la tabla se han desarrollado con la mejor información disponible en la oficina del Servicio, pero otros avistamientos de la especie se pueden producir. Si el proyecto se encuentra dentro de la distribución actualmente conocida de una especie, información adicional puede ser necesaria para determinar la presencia de un hábitat adecuado en el área del proyecto, y en algunos casos, censos especializados pueden ser necesarios para determinar la presencia / ausencia de las especies.
