The following assumptions are the basis for Table 1 and are subject to change as operations progress:

(1) mcy = million cubic yards
   Conversion from net air space based on 4:1 refuse-to-soil ratio.
(2) WMU1, Phase A and Phase A1 in-place refuse volume.
(3) WMU2 in-place refuse volume.
(4) Currently permitted refuse capacity (1995 SWFP) = 81 mcy.
(5) Assumes refuse inflow rate of 2,500 tons per day (tpd) from 1/1/01 to 12/31/03; 3,000 tpd from 1/1/04 to 12/31/08; 3,500 tpd from 1/1/09 to 12/31/13; and 4,000 tpd from 1/1/14, thereafter.
(6) Assumes a daily refuse inflow rate of 4,000 tpd. Zone 4 life after closure of Zone 1.

Note: Assumes unit weight of waste in-place is 1,333 lbs/cy for Zones 1 and 4. Does not account for final cover; accounts for 3-foot liner.
   Topography date of October 1, 1999 was used to determine airspace volumes and projections of 2,200 tpd and 3:1 refuse-to-soil ratio to December 31, 1999 and 2,500 tpd from January 1, 2000 to December 31, 2000 (4:1 refuse-to-soil ratio).
