

Appendix M

U.S. Fish and Wildlife Service
General Conservation Plan

APPENDIX M
PROPOSED GENERAL CONSERVATION PLAN
U.S. Fish and Wildlife Service
August 18, 2014

1.0 INTRODUCTION AND REGULATORY BACKGROUND

We, the U.S. Fish and Wildlife Service (USFWS), have prepared this proposed General Conservation Plan (GCP) as the permitting process to authorize incidental take resulting from Covered Activities on non-Federal lands under the interagency Draft Desert Renewable Energy Conservation Plan (DRECP), which is analyzed in the Draft Environmental Impact Report/Environmental Impact Statement (EIR/EIS). Please refer to Volume I.2.2 (Legal Framework, USFWS) of the Draft DRECP and Draft EIR/EIS for a discussion of the regulatory framework related to the Habitat Conservation Plan (HCP) and incidental take provisions of the Federal Endangered Species Act (ESA), including the USFWS policy on General Conservation Plans and the unintentional take provisions under the Bald and Golden Eagle Protection Act (Eagle Act). This proposed GCP is functionally a subset of the overall interagency DRECP and is based on the DRECP's analysis of renewable energy development impacts and its comprehensive Plan-Wide conservation strategy for Covered Species. Throughout this GCP appendix, we refer to supporting data and analyses in the Draft EIR/EIS by citing Volume number (I, II, III, IV), followed by chapter and section number. Please note that all references to "mitigation" in this GCP appendix refer to the mitigation that is required under ESA incidental take permit issuance criteria, and does not refer to mitigation that is required under the California Environmental Quality Act (CEQA).

The Renewable Energy Action Team (REAT) agencies, of which USFWS is a member, have proposed an interagency Preferred Alternative that is evaluated in the Draft DRECP and Draft EIR/EIS. The GCP is our proposed action, and is based on the effects analysis and conservation strategy of the interagency Preferred Alternative. We propose this GCP as a programmatic process for streamlining issuance of ESA section 10(a)(1)(B) permits for impacts to Covered Species resulting from renewable energy and transmission development on non-Federal lands within certain portions of the DRECP Plan Area. The GCP provides the regulatory structure for us to consider issuing permits to applicants who demonstrate their proposed projects are consistent with the terms and conditions of the GCP as set forth in this Appendix M. Other components of the interagency DRECP are the Bureau of Land Management (BLM) Land Use Plan Amendment (LUPA) and California Department of Fish and Wildlife (CDFW) Natural Community Conservation Plan (NCCP).

The California Energy Commission (CEC) and California State Lands Commission (CSLC) are requesting incidental take permits for renewable energy projects they may license or for which they may grant leases, respectively, under their state programs (refer to Volume I.2.3 and I.2.4 for a description of the regulatory backgrounds for CEC and CSLC). We are considering issuing permits to CEC and CSLC under the proposed GCP, after it is approved through the signing of a Record of Decision (ROD) on a Final DRECP and Final EIR/EIS and our completion of other internal USFWS decision documents. Information submitted to us by CEC and CSLC in support

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

of their applications is provided for public review in Section 11.0 below. Those application materials also serve as examples of how we will evaluate future permit requests under the GCP.

If we approve the GCP, the Imperial Irrigation District (IID) is considering applying for a permit under the GCP for incidental take of Covered Species associated with their proposed Salton Sea Incremental Habitat Plan (Incremental Plan). Because the Incremental Plan is still in development, IID is not applying for a permit at this time. A brief summary of the Incremental Plan is provided in Section 10.0 below, to inform the public of this potential future application under the GCP.

2.0 PROPOSED GCP PERMIT AREA, GCP PLAN AREA, AND BASELINE FOR COVERED SPECIES

The extent of Covered Activities under the GCP (see Section 3.0 below) is considered a subset of the interagency Preferred Alternative described in Volume II.3. The GCP covers a proposed GCP Permit Area within a larger GCP Plan Area. Within the GCP Permit Area, the 37 Covered Species listed in Table II.3-2 of Volume II.3.1.2.2 (DRECP Proposed Covered Species List) potentially would be incidentally taken in conjunction with Covered Activities. Covered Activities are described in Volume I.3.4 (Overview Description of Covered Activities)] and the GCP Permit Area is described in Volume I.0.3.1.2 (DRECP Permit Areas). The larger GCP Plan Area encompasses non-Federal lands in the GCP Permit Area and certain Federal lands outside the GCP Permit Area.

The GCP Permit Area totals approximately 4,371,000 acres, as described in Volume II.3.4 (GCP Elements of the Preferred Alternative, including Figure II.3-7 and Table II.3-59) and Volume II.3.1.4.4 (Transmission), and encompasses all non-Federal lands within the following areas:

- Approximately 1,632,000 acres in DRECP Development Focus Areas (DFAs) where USFWS will consider authorizing incidental take associated with Covered Activities
- Approximately 18,000 acres of new or modified/expanded transmission areas
- Approximately 7,000 acres of Study Area Lands with the interim designation of Special Assessment Areas (SAAs)
- Approximately 2,714,000 acres in the DRECP Plan-Wide Reserve Design Envelope, which includes 1,080,000 acres of Conservation Planning Areas (CPAs) that identify non-Federal lands appropriate for permittee mitigation acquisition from willing sellers; and non-Federal lands and inholdings within Existing Conservation Lands and BLM LUPA Conservation Designations.

The GCP Plan Area encompasses the GCP Permit Area and some BLM LUPA Conservation Designations within the Interagency Plan-Wide Conservation Priority Area that are outside the GCP Permit Area. Permittee non-acquisition mitigation measures may be implemented anywhere within the Interagency Plan-Wide Conservation Priority Area.

The DRECP Conservation Area refers to lands that are acquired for mitigation within the DRECP Plan-Wide Reserve Design Envelope. The DRECP Conservation Area will include mitigation lands that are acquired within the non-Federal CPAs, as well as non-acquisition

mitigation measures that are implemented on non-Federal and BLM lands within the Interagency Plan-Wide Conservation Priority Area (see Glossary of Terms).

The baseline acreage of modeled habitat for each Covered Species on non-Federal lands within the DRECP Plan Area is shown in Table III.7-93 of Volume III.7.6 (Biological Resources, Special Status Species). Applicants may request GIS database assistance from the DRECP Coordination Group, as discussed in Volume II.3.1.3.5.2 (The DRECP Data Portal), for information on modeled habitat and known occurrences of Covered Species that will be impacted at particular locations within DFAs. Applicants also will be able to access the online DRECP Data Portal. Requirements for project-specific presence/absence surveys for Covered Species to document the existing baseline are described in the Biological Conservation and Management Actions (CMAs) in Volume II.3.1.2.5 (Biological Conservation and Management Actions).

3.0 COVERED ACTIVITIES

Activities covered under the GCP are the DRECP Covered Activities described in Volume II.3.1.4 for the Preferred Alternative (Overview Description of Covered Activities), and include the distribution, magnitude, and scope of activities associated with the design, construction, operation, maintenance, and decommissioning of renewable energy facilities (including solar, wind, and geothermal) and associated transmission construction, operations, and maintenance activities on non-Federal lands. The GCP tables in Volume II.3.4 (GCP Elements of the Preferred Alternative) show the estimated megawatt (MW) distribution and technology mix, in acres, that are proposed for non-Federal lands in the DFAs; a detailed description of the methodology used to determine these acreages is discussed in Volume I.3.3 (Renewable Energy Goals and Planning Process) and Appendix F (MW Distribution). The acreages of ground disturbance in the tables represent the estimated project areas of renewable energy development that potentially could be built on non-Federal lands, and for which project proponents may need incidental take authorization. Table 9.1-1 in Section 9.0 below shows that approximately 138,800 acres of ground disturbance would result from renewable energy development in the GCP Permit Area, or about 8.5% of the total non-Federal lands within the DFAs.

The CMAs include actions required to avoid, minimize, and compensate for the effects of incidental take of Covered Species, and are detailed in Volume II.3.1.2.5 (Preferred Alternative, Biological Conservation and Management Actions) and Appendix H (CMAs Documentation). The CMAs also describe project-specific pre-construction surveys and clearance surveys for certain Covered Species. In addition, CMA implementation within the DRECP Conservation Area may involve certain activities that could result in short-term incidental take of Covered Species associated with activities that would provide long-term species benefits (for example, the disturbance to desert tortoise habitat resulting from removal of invasive plants). However, the GCP and any permits issued under the GCP will not cover any incidental take that would result from CMA implementation or implementation of non-acquisition mitigation measures on Federal lands, as further discussed in Section 5.1 below.

DRECP Future Assessment Areas (FAAs) and Special Assessment Areas (SAAs) are interim categories subject to ongoing analysis, and are discussed in the Glossary of Terms and in Volume II.3.1.4 (Preferred Alternative, Overview Description of Covered Activities). Under the Preferred Alternative, non-Federal lands are present within each of these categories (see Table II.3-59 in Volume II.3.1.4). FAAs may be designated either as DFA or part of the DRECP Plan-Wide Reserve Design Envelope through a future amendment to the DRECP and GCP; therefore, the proposed GCP does not cover renewable energy development in the FAAs. SAAs will be designated as either DFA or included in the DRECP Plan-Wide Reserve Design Envelope in the Final DRECP and Final EIR/EIS. We assume that all SAA non-Federal lands may be designated as DFA, and the analysis for the GCP should account for the maximum amount of incidental take of Covered Species that would occur on SAA lands in the GCP Permit Area and the mitigation required for the effects of that take. However, the SAAs contain only about 7,000 acres of non-Federal lands. If this entire amount is designated as DFA and added to the DFA area already proposed, the SAA portion would account for only 0.43% of that non-Federal acreage. We consider this amount to be insignificant (i.e., unable to be meaningfully measured, detected, or evaluated). For this reason, we conclude that the incidental take that could occur on non-Federal lands within the SAAs is adequately represented in general by the GCP take analysis for the DFAs.

4.0 PROPOSED INCIDENTAL TAKE OF COVERED SPECIES

The impacts of the DRECP Preferred Alternative on biological resources, including impacts to Covered Species, are described and analyzed in Volume IV.7 (Environmental Consequences, Biological Resources). The methodology for quantifying impacts to Covered Species (i.e., the effects of incidental take) is explained in Volume IV.1.2 (Summary of Alternatives Analyzed), IV.1.4 (Approach to Impact Assessment), IV.7.1 (Biological Resources, Approach to Impact Analysis), and IV.7.3.2 (Impact Analysis by Alternative, Preferred Alternative). Incidental take is initially estimated by the surrogate of ground-disturbance to modeled habitat for each Covered Species; these impacts will be minimized and mitigated by implementation of species-specific, and in some cases by community-level and landscape-level, CMAs. Please see Volume IV.7.3.2.4 for a summary of impacts to Covered Species under the GCP as we propose it in the Preferred Alternative. Appendix R.IV.7 contains tables that show acreage impacts to each Covered Species under the Preferred Alternative. In addition, Table 9.1-1 below is a spreadsheet that shows the residual impacts to modeled habitat for each Covered Species after implementation of avoidance and minimization CMAs, which represents the anticipated maximum level of incidental take that would result from Covered Activities and that could be authorized under the GCP.

Operational impacts associated with solar reflectance and flux, other aspects of solar facility infrastructure (e.g., photovoltaic panels, evaporation ponds), transmission power lines, and wind turbines (rotor-swept area) are analyzed as numbers of animals (birds and bats) injured or killed, as discussed in Volume IV.7.3.2.1 (Plan-wide Impacts of Implementing the DRECP: Preferred Alternative). In particular, Table IV.7-84 shows the estimated range of bird and bat collisions per year at full build-out of renewable energy development in the GCP Permit Area, for all species of birds and bats. Table IV.7-54 in Volume IV.7.3.2.1 and Table 9.1-1 below indicate that the

estimated incidental take of bird and bat Covered Species in the GCP Permit Area through 2040 is about 650 birds and 130 bats.

5.0 PROPOSED MINIMIZATION AND MITIGATION MEASURES

5.1 Conservation and Management Actions (CMAs)

The DRECP's interagency conservation strategy is described in Volume II.3.1.2 (Preferred Alternative, Conservation Strategy). CMAs for Covered Species include avoidance and minimization measures, as well as appropriate compensation ratios required to mitigate the residual effects of take after avoidance and minimization CMAs have been applied. Table 9.1-1 below shows the estimated level of incidental take, in acres of modeled habitat, for each Covered Species after implementation of avoidance and minimization CMAs, and the acres of mitigation lands required to compensate for that take, according to the compensation ratios included in the CMAs detailed in Volume II.3.1.2.5.7 (Compensation Conservation and Management Actions). Table 9.1-1 also shows the acreages within the Interagency Plan-Wide Conservation Priority Area that will be available as mitigation options for applicants under the GCP (including non-Federal acquisitions within the CPAs, and in non-Federal inholdings within Existing Conservation Lands and BLM LUPA Conservation Designations). Table 9.1-2 notes whether sufficient lands are available within the Interagency Plan-Wide Conservation Priority Area to compensate for the anticipated levels of take. Applicants generally would provide for the required compensation by paying a mitigation fee. The mitigation fee is the same fee referred to as the DRECP "implementation fee" in Volume II.1.5 (Preferred Alternative, Plan Implementation). In general, applicants will have the following mitigation options:

1. Payment of the mitigation fee, based on the estimated level of incidental take for each Covered Species after implementation of CMAs, for the acres of mitigation lands required under appropriate CMA compensation ratios.
2. Donation of appropriate conservation lands acquired by the permittee to the DRECP Conservation Area, including a proportional monetary contribution to the DRECP endowment to support long-term monitoring and management of the DRECP Conservation Area through the DRECP Monitoring and Adaptive Management Program (MAMP). Refer to Volume II.1.5.5 (DRECP Biological Conservation and Mitigation Program) for details on permittee conveyance of mitigation lands to the DRECP Conservation Area.
3. Dedication through a conservation easement of appropriate off-site, permittee-owned lands to the DRECP Conservation Area, including a proportional monetary contribution to the DRECP endowment to support long-term monitoring and management of the DRECP Conservation Area through the MAMP. Refer to Volume II.1.5.5 (DRECP Biological Conservation and Mitigation Program) for details on permittee conveyance of mitigation lands to the DRECP Conservation Area.
4. Payment of the DRECP mitigation fee to fund implementation of non-acquisition measures for certain Covered Species. Adequate mitigation may include a combination of land acquisition and non-acquisition mitigation measures.

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

For options 2 and 3, during the preliminary integrated project proposal review process described in Volume II.3.1.5.3, the DRECP Coordination Group will determine the amount that the applicant must contribute toward the DRECP endowment for implementing the MAMP. The roles and responsibilities of the DRECP Coordination Group are described in Volume II.3.1.5.2.4. USFWS will be a member of the Coordination Group.

The CPAs are non-Federal lands within the DRECP Plan-Wide Reserve Design Envelope that fall outside of Existing Conservation lands and BLM LUPA Conservation Designations (see Glossary of Terms). The DRECP Conservation Area will be assembled from lands within the mapped CPAs by acquiring land in fee-title or conservation easement from willing sellers. For permits issued under the GCP, CPAs are where land acquisitions will be focused to mitigate the effects of incidental take of Covered Species. Mitigation also may be directed toward non-Federal inholdings within Existing Conservation Areas and BLM LUPA Conservation Designations. The DRECP Coordination Group will manage mitigation fees received from GCP permittees, and oversee and prioritize the acquisition of mitigation lands for the DRECP Conservation Area. Please refer to Volume II.3.1.5.5 (Preferred Alternative, Implementation Plan, DRECP Biological Conservation and Mitigation Program) for the criteria the Coordination Group will use to identify suitable lands for mitigation acquisition.

In addition to acquisition of conservation lands in fee-title or by conservation easement, mitigation options may include implementation of non-acquisition mitigation measures for certain Covered Species, as described in Volume II.3.1.2.5 (Preferred Alternative, Biological Conservation and Management Actions), Appendix H (CMAs Documentation), and Table H-8 (Eligible Compensation Actions for Impacts to DRECP Covered Species). Non-acquisition mitigation measures may be implemented in limited circumstances on Federal lands that are not part of the GCP Permit Area, but are within the GCP Plan Area and consistent with the species-specific conservation strategies of the Plan-wide biological goals and Objectives (BGOs). Non-acquisition mitigation measures will be considered for implementation within the Interagency Plan-Wide Conservation Priority Area, which includes some lands within BLM LUPA Conservation Designations on the condition that any BLM requirements for species conservation have already been met. That is, any non-acquisition measures implemented by GCP permittees would be over and beyond any BLM requirements to conserve species. Any incidental take that results from habitat enhancement or restoration activities implemented as non-acquisition mitigation measures on Federal lands would be exempted as appropriate through the ESA section 7 consultation process. Section 10 regulatory assurances, in particular “No Surprises” assurances, will not apply to Federal agencies where non-acquisition mitigation measures take place on Federal lands. In general, non-acquisition mitigation measures may be approved on Federal lands where those measures would more effectively mitigate the effects of take for certain Covered Species than would land acquisition, and where those measures would contribute to implementing specific objectives in the Plan-Wide BGOs. For some Covered Species, mitigation may involve a combination of acquisition of conservation lands and implementation of non-acquisition mitigation measures.

We cannot estimate the actual acreage of lands where permittee non-acquisition mitigation activities may be implemented at this time, but it likely represents an equivalent of up to 10% to

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

50% of the acquisition needed in the Interagency Plan-Wide Conservation Priority Area to mitigate the effects of incidental take for most Covered Species, although for certain Covered Species it may be higher. For desert tortoise, golden eagle, and desert pupfish, the amount of non-acquisition measures may represent up to 70% of the required acquisition, and up to 80% for Owens pupfish, Owens tui chub, desert bighorn sheep, and desert kit fox. For example, for desert tortoise, up to 70% of a permittee's total mitigation fee may be used to fund fence construction or other habitat protection or enhancement actions. Please refer to Table H-8 in Appendix H for a list of appropriate non-acquisition measures that potentially would be approved for certain species. During the preliminary integrated project proposal review process, the DRECP Coordination Group will provide input to the applicant regarding the cost of appropriate non-acquisition mitigation measures.

Acreage estimates for the GCP's total contribution to the DRECP Conservation Area are shown in Table II.3-59 in Volume II.3.4 (GCP Elements of the Preferred Alternative), GCP tables in Appendix R.IV.7, and Table 9.1-1 below. Because it is unknown where project-specific non-acquisition mitigation measures may be implemented, the estimate of the GCP's contribution to the Interagency Plan-Wide Conservation Priority Area identified in Table II.3-59 and Table 9.1-1 does not represent the actual acreages where non-acquisition measures may be implemented. Instead, Table 9.1-1 shows the acreage available for non-acquisition mitigation outside the GCP Permit Area, which in general are BLM LUPA Conservation Designations.

Operational impacts to Covered Species (birds and bats) will be addressed by permittee implementation of CMAs to avoid, minimize, and compensate for those impacts (refer to Volume II.3.1.2.5 [Preferred Alternative, Biological Conservation and Management Actions]).

5.2 Maximum Extent Practicable

The incidental take issuance criterion at ESA section 10(a)(2)(B)(ii) requires that an applicant will, to the maximum extent practicable, minimize and mitigate the effects of the proposed taking. If USFWS finds that issuance criteria are met for the GCP as a whole, then any application that is consistent with the terms and conditions of the GCP would also meet the issuance criteria. After public review of the proposed GCP and completion of an internal ESA section 7 consultation on the GCP, we will prepare a "Findings and Recommendations" statement (Findings) for the GCP. The Findings will include a determination of whether the GCP meets the ESA criteria for issuing incidental take permits. We will use the following analytical process to determine whether the GCP meets the "maximum extent practicable" criterion:

- (1) define the anticipated amount of take and the effects of that take on Covered Species;
- (2) determine whether the GCP's minimization and mitigation measures (i.e., the CMAs) are adequate to offset the effects of take;
- (3) provide a clear, documented biological rationale regarding the adequacy of mitigation in the ESA section 7 biological opinion and Findings;
- (4) note in the administrative record whether the mitigation is consistent with other HCPs covering the same species, and if not, explain why the mitigation in the GCP is adequate; and
- (5) explain how the take would be minimized and mitigated to the maximum extent practicable.

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

We will use the analysis of the proposed GCP under the Preferred Alternative and the other alternatives (including No Action) in the Final DRECP and Final EIR/EIS to help us determine whether the effects of take under the GCP would be minimized and mitigated to the maximum extent practicable. For example, we will examine whether there are alternatives that are more protective of species by proposing more conservation, less development, or both. The alternatives analysis in the Final EIR/EIS will help us evaluate the adequacy of the proposed mitigation under the Preferred Alternative, and determine whether additional mitigation would be impracticable. We must demonstrate that the maximum amount of incidental take expected to result for each Covered Species within the GCP Permit Area would be minimized and mitigated to the maximum extent practicable. We will make this conclusion based on the assumption that the level of take anticipated for each Covered Species would be mitigated at required compensation ratios by acquisition of appropriate conservation lands available within the Interagency Plan-Wide Conservation Priority Area and by implementation of appropriate non-acquisition mitigation measures.

6.0 ALTERNATIVES TO THE TAKING PROPOSED IN THE GCP

ESA section 10(a)(2)(A)(iii) requires that a conservation plan must specify alternative actions to the proposed taking that the applicant considered and the reasons why such alternatives are not being utilized. This analysis is distinct from the alternatives evaluated under NEPA. NEPA alternatives are evaluated in the context of impacts to the human environment (i.e., all resources addressed in Volumes III and IV); alternatives to the proposed taking under the GCP evaluate only impacts to Covered Species in the GCP Permit Area as proposed under the Preferred Alternative. Moreover, there is no “applicant” for the GCP; the USFWS has developed the GCP as a programmatic approach for issuing individual incidental take permits for applications that are consistent with the GCP. Therefore, as the sponsoring agency for the GCP, we will evaluate alternatives to the proposed taking under the proposed GCP as it is analyzed in the Preferred Alternative of the Draft DRECP and Draft EIR/EIS.

In the case of the proposed GCP, a No Action Alternative (i.e., no approval of a GCP and no issuance of permits under a GCP) likely would not result in fewer impacts to Covered Species. If we do not approve the GCP, applicants for renewable energy projects on non-Federal lands would have the option of applying for individual incidental take permits for their proposed projects or programs. In the absence of the GCP, we assume project proponents would prepare HCPs for renewable energy development on non-Federal lands throughout the DRECP Plan Area. Such applicants would not necessarily direct their projects to low biological conflict areas, such as the DRECP’s DFAs. Moreover, there would be no comprehensive reserve design based on strategic habitat conservation and conservation biology principles for mitigation of project impacts to listed species. To date, we are working with two renewable energy HCP applicants in the California desert, and we are uncertain about the future demand for individual renewable energy HCPs. In general, however, we consider that lack of a GCP option would not necessarily result in less take of listed species than the GCP under the DRECP’s Preferred Alternative, simply because more non-Federal lands would be considered for potential development. Furthermore, lack of a GCP option would not respond to the USFWS’s directive to advance the Department of the Interior’s (DOI) national policy goals to identify and prioritize specific

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

locations best suited for large-scale production of solar energy on public lands and encourage the production, development, and delivery of renewable energy as one of DOI's highest priorities.

During the public scoping period for the DRECP Draft EIR/EIS (July 29 – September 12, 2011), the REAT agencies received comments, suggestions, and other information regarding the scope of issues and alternatives to be considered in the DRECP. After considering the comments, the REAT agencies determined that the following alternatives described in Volume II.8 (Alternatives Considered But Not Carried Forward) would not be included as alternatives analyzed in the Draft EIR/EIS: (1) Distributed Generation Alternative, (2) Center for Energy Efficiency and Renewable Technologies (CEERT) Proposed Solar Areas Alternative, (3) California Wind Energy Association (CalWEA) Proposed Wind Areas Alternative, (4) BLM Lands Only Alternative, (5) Private Lands Only Alternative, (6) Dispersed Development Alternative, (7) Southeast Emphasis Alternative, and (8) Avian Avoidance Alternative. We considered these alternatives and determined that a GCP component under alternatives (1) and (8) likely would result in less incidental take of Covered Species than the proposed GCP under the Preferred Alternative. The paragraphs below briefly summarize alternatives (1) and (8) and why neither one of them is being utilized as a GCP option for the DRECP.

Distributed Generation Alternative

Distributed generation refers to the installation of small-scale solar energy facilities producing up to 20 MW at individual locations at or near the point of consumption, such as residential roof-top solar panels. For the GCP, this alternative would partially address the purposes of the ESA by providing a means whereby the ecosystems upon which federally protected species depend may be conserved and by providing a program for the conservation of such species. Because sensitive desert habitats would not be disturbed by large, utility-scale solar facilities, we consider this alternative likely would result in less take of Covered Species under the GCP than would occur under the GCP as a component of the DRECP's Preferred Alternative.

For a variety of reasons (e.g., upper limits on integrating distributed generation into the electric grid, cost, lack of electricity storage in most systems, and continued dependency of buildings on grid-supplied power), the REAT agencies determined that distributed energy generation alone cannot meet California's goals for renewable energy development. Ultimately, both utility-scale and distributed generation renewable energy development will be needed at increased levels. Because this alternative conflicted with the DRECP renewable energy goals, the REAT agencies did not advance it for further analysis. The USFWS supported that decision because this alternative would not respond to our commitment to advance DOI's national policy goals to identify and prioritize specific locations best suited for large-scale production of solar energy on public lands and to encourage the production, development, and delivery of renewable energy as one of DOI's highest priorities.

Avian Avoidance Alternative

This alternative would revise the DRECP planning area to avoid impacts to eagles, exclude areas that overlap with California condor use areas, and exclude areas that support high densities of wintering or migratory birds, contain a high level of raptor activity, or contain breeding, wintering, or migrating populations of less abundant species. For the GCP, this alternative would

partially address the purposes of the ESA as noted above for the Distributed Generation Alternative. Because important avian habitats would not be disturbed and take of avian Covered Species resulting from Covered Activities would not occur, we consider this alternative likely would result in less overall take of Covered Species than would occur under the GCP as a component of the DRECP's Preferred Alternative. However, to avoid impacts to birds, renewable energy development likely would not be concentrated in defined DFAs that are most suited for development and that would have fewer conflicts with long-term conservation and management of non-avian Covered Species, and thus would potentially pose high biological resource conflicts to other wildlife.

The REAT agencies rejected the Avian Avoidance Alternative for further analysis because it would only partially meet the purpose of the DRECP to streamline renewable energy and provide for long-term conservation and management of all Covered Species. The USFWS supported that decision because this alternative would not respond to our commitment to advance DOI's national renewable energy policy goals, as noted above.

7.0 GCP IMPLEMENTATION

The GCP will be implemented within the DRECP Plan-wide implementation structure described in Volume II.3.1.5 (Preferred Alternative, Plan Implementation).

7.1 Application Process

7.1.1 Applicant Responsibilities

Applicants for incidental take authorization associated with renewable energy or transmission proposals may include state agencies, local governments (such as cities or counties), or individual landowners or project proponents. Applicants also may be owners or operators of existing renewable energy facilities that are consistent with the GCP's Covered Activities and that are located within DFAs. Owners/operators of such existing facilities may apply for a permit under the GCP only for operational impacts to Covered Species that will occur after permit issuance, and must agree to implement the CMAs to avoid, minimize, and mitigate operational impacts contained in Volume II.3.1.2.5 (Preferred Alternative, Biological Conservation and Management Actions).

State agencies and local governments, if issued a "master" permit under the GCP for their programs, would be able to extend their incidental take authorization to qualified third-party project proponents over which the agency or local government has jurisdiction. USFWS permit regulations at 50 CFR 13.25(d) specify that, "[e]xcept as otherwise stated on the face of the permit, any person who is under the direct control of the permittee, or who is employed by or under contract to the permittee for purposes authorized by the permit, may carry out the activity authorized by the permit." As defined at 50 CFR 13.25(e), in the case of incidental take permits issued to a state or local governmental entity, "a person is under the direct control of the permittee where: (1) The person is under the jurisdiction of the permittee and the permit provides that such person(s) may carry out the authorized activity; or (2) The person has been issued a

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

permit by the governmental entity or has executed a written instrument with the governmental entity, pursuant to the terms of the implementing agreement.” The permittee is ultimately responsible for the compliance of all third parties to which they extend incidental take authorization. Permittees must (1) require third parties to implement the terms and conditions of the agency’s permit, (2) monitor compliance with the permit terms and conditions by third parties granted take authorization, and (3) take action to enforce compliance with the permit terms and conditions if necessary. To ensure the conservation commitments of the permit are met, the permittee is responsible for reporting to the USFWS on the activities and take levels of all third parties.

CEC and CSLC are examples of state agencies that are requesting the capacity for third-party take authorization (see Section 11.0, below). Third-party project proponents who are under the “direct control” of a master permit holder (such as CEC or CSLC) may be covered by the take authorization in the master permit at the agency’s discretion. Individual project proponents usually come under the direct control of the master permit holder through issuance of a certificate of inclusion, letter of participation, state license or lease (such as that required by CEC and CSLC, respectively), or building/grading permit. If a project proponent requests a lease from CSLC for development of a renewable energy facility that is under CEC’s licensing jurisdiction (i.e., solar thermal or geothermal facilities producing 50 MW or more), then that proponent must apply for third-party take authorization from CEC, not CSLC, as discussed in Volume II.3.1.5.2.2 (Roles and Responsibilities for Implementation of DRECP Planning Components). These conditions also apply to other state agencies or local jurisdictions who obtain a master permit under the GCP.

Permit applicants must submit a complete application package to the Palm Springs Fish and Wildlife Office (777 East Tahquitz Canyon Way, Suite 208, Palm Springs, California 92262). A complete application package includes a Federal Fish and Wildlife Permit Application Form 3-200-56 signed by the applicant, a \$100.00 application fee (not required for government agencies), a proposed Habitat Conservation Plan (HCP), an analysis of the effects to Covered Species of the requested take authorization, and an analysis of the proposed permit issuance under NEPA. For the HCP and NEPA requirements, the application need only refer to the appropriate GCP sections of the Final DRECP and Final EIR/EIS, when it is approved through the signing of a ROD. Applicants must also submit additional information with Form 3-200-56 to demonstrate compliance with the terms and conditions of the GCP as set forth in this Appendix M. The Palm Springs Fish and Wildlife Office will determine whether an application package is complete, and will forward the complete package to the Pacific Southwest Regional Office’s HCP Coordinator for processing. As required by ESA section 10(c), the Regional Office will arrange for publication of a Notice of Availability in the Federal Register for each application received.

Table 7.1.1-1 lists the additional information applicants must provide with Form 3-200-56. See also Volume II.3.1.5.3 (Integrated Project Proposal Review Process).

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

Table 7.1.1-1. Additional Information Required for Incidental Take Permit Applications under the USFWS General Conservation Plan (items marked * must include citations of the DRECP volume and chapter/section that supplements or provides background for the required information).

- **PROJECT OR PROGRAM DESCRIPTION:**
 - Project or program title.
 - Project or program location map with address, city/county, Assessor's Parcel Number (APN), and latitude/longitude coordinates.
 - Requested permit duration.
 - *Description of Covered Activities, including the size and type of proposed renewable energy facility (MW and technology type) or transmission development, with estimated acres of permanent ground disturbance, and of rotor-swept area for wind turbines.
 - *Description of all aspects of project siting, construction, operations and maintenance, and decommissioning, including pre-construction and clearance surveys for Covered Species.
 - For state agency or local government programs that will extend incidental take authorization to third parties, a description of the program's purpose and how it is implemented, and the criteria the agency or local government will use to decide whether to extend take authorization to third parties. The program description must specify how the permittee will (1) require third parties to implement the terms and conditions of the agency's permit, (2) monitor compliance with the permit terms and conditions by third parties granted take authorization, and (3) take action to enforce compliance with the permit terms and conditions if necessary.
- **PROJECT OR PROGRAM BASELINE:**
 - *Proposed list of Covered Species.
 - *Tables of baseline acres of modeled habitat for each Covered Species in the project or program area.
 - Results of any site-specific presence/absence surveys required for Covered Species, including number, age, and sex of such species to the extent known.
- **PROJECT OR PROGRAM IMPACTS AND MITIGATION:**
 - *Tables showing the impact acres of modeled habitat for each Covered Species after avoidance and minimization CMAs have been applied (i.e., the amount of incidental take to be covered by the permit), for which the applicant will need to provide mitigation.
 - *An analysis of operational impacts likely to result in injury or mortality of Covered Species (birds and bats), and how those impacts will be minimized.
 - *A list of the CMAs required to be implemented for the affected Covered Species.
 - *Description, including schedules and timeframes, for implementation of any proposed non-acquisition mitigation measures for Covered Species.
- **CRITICAL HABITAT ANALYSIS:**
 - *Tables showing the acres of designated or proposed critical habitat that occur on project sites or within the jurisdiction of agency programs.

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

- *Tables showing the acres of designated or proposed critical habitat that will be impacted on project sites or within the jurisdiction of agency programs.
- *Tables showing the residual impact acres of critical habitat after avoidance and minimization CMAs have been applied, for each ESA-listed species for which critical habitat has been designated on project sites or within the jurisdiction of agency programs.
- *Description, including schedules and timeframes, for implementation of any measures required to offset any potential destruction or adverse modification of designated critical habitat on project sites or within the jurisdiction of agency programs (e.g., a list of applicable CMAs the applicant will implement to offset impacts to critical habitat).
- **FUNDING ASSURANCES:**
 - Detailed description of the costs of implementing the terms and conditions of the permit, and documentation of how the applicant will assure funding for those obligations over the life of the permit.
- **CHANGED AND UNFORESEEN CIRCUMSTANCES**
 - *Detailed description of how the permittee will respond to Changed Circumstances for renewable energy projects or programs.
- **MONITORING AND REPORTING:**
 - *Description of how the applicant will assure monitoring compliance with the permit terms and conditions. State agency and local government permittees with third-party take authorization must describe how they will report to the USFWS on the activities of all third parties, to ensure permit take limits are not exceeded and the conservation commitments of the permit are met,
- **OTHER MEASURES:**
 - A Bird and Bat Conservation Strategy (BBCS) outlining how the project or program will minimize impacts to non-Covered Species that are protected under the Migratory Bird Treaty Act (MBTA), as described in Section 7.6.3.2.1 below. For state agency or local government programs that will extend incidental take authorization to third parties, the agency or local government must require third parties to provide a BBCS for site-specific proposals that are likely to impact MBTA-protected migratory birds.
 - A cultural resources survey report detailing all available information to determine whether historic properties are present in the project area, including results of any field surveys, needed for USFWS compliance with Section 106 of the National Historic Preservation Act (NHPA). For state agency or local government permittees that will extend incidental take authorization to third parties, the agency or local government must require third parties to provide a cultural resources survey and a proposed mitigation protocol for site-specific proposals that are likely to impact cultural resources.

7.1.2 DRECP Coordination Group Responsibilities

The DRECP Coordination Group (of which USFWS is a member) will oversee a preliminary integrated project proposal review process for the Plan-wide DRECP, including proposals on BLM lands under the LUPA and NCCP, and on non-Federal lands under the NCCP and GCP, as detailed in Volume II.3.1.5.3 (Integrated Project Proposal Review Process). Applicants for permits under the GCP may take advantage of this optional, pre-application review of their proposed projects for a preliminary recommendation as to the consistency of the proposal with the DRECP. The Coordination Group's Program Manager will direct applicants to the correct permitting agency or agencies and to official agency application forms. The Coordination Group also will provide input to the applicant regarding appropriate non-acquisition mitigation measures. In general, with or without the optional preliminary review by the Coordination Group, the USFWS intends to reach a permit decision within 1 year from the time we receive a complete application package.

7.1.3 USFWS Approval

After consideration of public comments on the GCP component of the Draft DRECP and Draft EIR/EIS, USFWS will decide whether to approve the GCP for issuance of incidental take permits to applicants who demonstrate consistency with the GCP. This consistency evaluation will be based on the impact (incidental take) analysis contained in Appendix M (General Conservation Plan) and Volume IV.7.11 (Environmental Consequences, Preferred Alternative, General Conservation Plan), Section 9.0 below, and our internal ESA section 7 consultation on the GCP. In addition, we will prepare a "Findings and Recommendations" statement (Findings) that summarizes how the GCP meets ESA incidental take issuance criteria. If the conclusions of the section 7 biological opinion and the Findings are positive, we will recommend that our Pacific Southwest Region Regional Director sign a Record of Decision for the Final DRECP and Final EIR/EIS. All records regarding approval of the GCP, and of any permit decisions under the GCP, will be kept on file at the Palm Springs Fish and Wildlife Office and/or the Carlsbad Fish and Wildlife Office (2177 Salk Avenue, Suite 250, Carlsbad, California 92008).

Once we approve the GCP through the documentation described above, we will consider permit applications for incidental take resulting from renewable energy projects or programs in the GCP Permit Area. Upon receipt of a complete application package, we will decide whether to issue a permit to the applicant, subject to a determination of eligibility pursuant to 50 CFR 13.21(c) (disqualifying factors) and completion of any administrative or noticing requirements. If we find an application consistent with the GCP and the impact (incidental take) analysis contained in Appendix M (General Conservation Plan), Volume IV.7.11 (Environmental Consequences, Preferred Alternative, General Conservation Plan), and our internal ESA section 7 consultation on the GCP, we may issue a permit to the applicant. The documents noted here will be the foundation of the administrative record we will use to support our permit decisions.

In addition to the documents noted above, the administrative record for each permit decision will contain an individual Findings statement summarizing how the application is consistent with the terms and conditions of the GCP, including how the application meets ESA incidental take

issuance criteria. We will prepare a similar Findings statement summarizing how the application meets NEPA requirements through consistency with the analysis contained in the Final DRECP and Final EIR/EIS. The Palm Springs Fish and Wildlife Office will review each permit application and transmit draft Findings statements to the USFWS Pacific Southwest Regional Office. The Regional Office will review the Findings, and if the Deputy Regional Director approves the statement, she/he will issue the permit. All records on permit decisions will be kept on file at the Palm Springs Fish and Wildlife Office and/or the Carlsbad Fish and Wildlife Office.

7.2 Funding Assurances

7.2.1 Applicant Funding Assurances for Implementing Permit Terms and Conditions

ESA section 10(a)(2)(A)(ii) requires that the applicant must specify in the conservation plan the funding that will be available to implement the plan. Each applicant for a permit under the GCP must provide financial assurances that they can fund implementation of their permit requirements, including implementing CMAs on their project sites; monitoring and reporting on compliance with permit terms and conditions, including incidental take levels, on their project sites; adaptive management responses on their project sites; and staff costs associated with permit administration. The applicant must also pay a comprehensive mitigation fee to cover the acquisition of mitigation lands within the DRECP Reserve and for implementation of appropriate non-acquisition mitigation measures. The mitigation fee also will include the applicant's contribution toward funding the DRECP interest-bearing endowment to cover the applicant's proportional share of costs for MAMP implementation. The MAMP will provide for the DRECP Coordination Group's management of the acquired mitigation lands and any implementation of any non-acquisition mitigation measures, monitoring and reporting on the effectiveness of the DRECP Conservation Area in achieving the Plan-Wide BGOs, and responding to Changed Circumstances within the DRECP Conservation Area. Please refer to Volume II.3.1.3 (Preferred Alternative, Monitoring and Adaptive Management Program) for details on the DRECP MAMP.

The mitigation fee required of GCP applicants is the same fee referred to as the DRECP implementation fee in Volume II.1.5 (Preferred Alternative, Plan Implementation). The implementation fee will be designed to recover appropriate levels of DRECP costs. The fee structure may be dependent on individual project situations and will require further analysis. For a detailed analysis of land acquisition costs and of costs to implement non-acquisition mitigation measures, refer to Volume II.3.1.7 (Cost and Funding) and Appendix I (Cost Methods, Assumptions and Categories for DRECP Mitigation Cost Estimation).

The cost analysis in Volume II.3.1.7 is based on the simplifying assumption that mitigation land will be acquired in full fee, resulting in a conservative estimate of total cost (i.e., more likely to overestimate costs than to underestimate them). This assumption is necessary because land acquisition costs can be estimated more accurately and reliably than other kinds of conservation actions, such as conservation easements. The non-acquisition mitigation measures included in the cost analysis are based on certain types of habitat restoration and protection actions, and focus on four general actions that the REAT agencies expect to be the predominant methods;

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

however, all methods outlined in Table H-8 of Appendix H (CMAs Documentation) are possible. The four non-acquisition mitigation measures considered in the cost analysis are (1) habitat enhancement; (2) fencing and signage; (3) roost habitat creation, enhancement, and protection; and (4) predator, cowbird, or starling control. The assumptions for these analyses are discussed further in Appendix I.

Cost projections for mitigation acquisition, non-acquisition mitigation measures, and activities related to managing the DRECP Conservation Area are described in Volume II.3.1.7 (Preferred Alternative, Implementation Plan, Cost and Funding), Volume II.3.1.7.1 (Cost to Implement the GCP and NCCP), Volume II.3.1.7.2 (Cost Estimate Methodology), and Appendix I (Cost Methods, Assumptions and Categories for DRECP Mitigation Cost Estimation). As part of the permit application (see Section 7.1.1 above), each applicant must provide a realistic estimate of the various categories of costs needed to implement the terms and conditions of their permit, and the funding sources to support those costs over the life of the permit. The actual costs over time may turn out to be more or less than those projected in Volume II.3.1.7, and the DRECP Coordination Group will ensure that the fee is re-evaluated periodically and adjusted as necessary to reflect actual acquisition, management, and inflation costs. The Coordination Group will manage receipt of the mitigation fees, as discussed in Volume II.3.1.5.2.4 (Preferred Alternative, Implementation Plan, DRECP Coordination Group), and will use the fees to establish an interest-bearing conservation endowment. The Coordination Group may seek the support of an entity such as the National Fish and Wildlife Foundation to serve as a fiscal agent for collecting the mitigation fees and administering the conservation endowment.

For the USFWS to be reasonably certain that mitigation lands will be acquired and non-acquisition mitigation measures will be implemented as appropriate, the applicant must provide assurances to the USFWS that project-specific costs will be covered and the mitigation fee will be paid. Where development will be allowed to proceed prior to acquisition of mitigation lands and implementation of non-acquisition mitigation measures, the permittee must post a bond or other security sufficient to satisfy the mitigation fee at least 30 days prior to the permittee's initial ground-disturbing activities. A permittee that extends take authorization to third-party project proponents must require those proponents to pay the mitigation fee by similar methods and within the same timeframes. Conservation of mitigation lands will be assured in perpetuity by a conservation easement or other legal mechanism agreed to by the USFWS and DRECP Coordination Group. Acquired mitigation lands will be transferred in fee-title to a non-profit organization approved by the Coordination Group as qualified pursuant to California Government Code section 65965, or to another government entity with either a conservation easement, deed restriction, or other protective measures approved by the Coordination Group over those lands.

Please refer to Volume II.3.1.5 (Preferred Alternative, Plan Implementation) for a description of the DRECP Plan-wide implementation structure, which describes the institutional structure and organizational arrangements that will be established to implement the DRECP, including the GCP. Volume II.3.1.5 sets out the roles, functions, and responsibilities of the various entities that will participate in DRECP implementation, including USFWS and permittees under the GCP.

The DRECP Coordination Group, of which USFWS will be a member, will be responsible for day-to-day implementation of DRECP Plan-wide programs and for coordination among DRECP participating entities regarding implementation of each DRECP planning component, including the GCP. DRECP Plan-wide programs include the following activities that involve the Coordination Group's implementation of certain actions on behalf of GCP permittees, including mitigation land acquisition; implementation of non-acquisition mitigation measures; DRECP Conservation Area monitoring, management, and habitat restoration; adaptive management; data management and access; and finances, including receipt and management of mitigation fee revenues and endowments. Permittees under the GCP will participate in the Plan-wide programs by providing funding, through payment of the mitigation fee, to support those programs.

7.2.2 USFWS Funding Assurances for Administering the GCP

USFWS funding assurances for administering the GCP (i.e., dedication of staff time for application review, participation in the DRECP Coordination Group, etc.) are contingent on annual Congressional budget allocations and are subject to the Antideficiency Act. Recent DOI budgets for the USFWS have included funding for activities associated with energy development, including funding for the Ecological Services Planning and Consultation program to support approvals of renewable energy projects. The Palm Springs Fish and Wildlife Office is a field office within the USFWS Ecological Services program, and provides expert technical assistance and conservation recommendations to facilitate the siting, construction, and operation of renewable energy and transmission projects in order to avoid or mitigate adverse impacts to fish and wildlife and their habitats. To complete comprehensive renewable energy and conservation plans such as the DRECP will require intense, focused, and dedicated attention from Palms Springs Fish and Wildlife Office and Pacific Southwest Regional Office staff for the foreseeable future. The proposed GCP, through its programmatic, streamlined permitting process, is intended to reduce the usual USFWS field office and regional office staff costs needed to work with individual project proponents to develop project-specific HCPs. The Pacific Southwest Regional Office will dedicate staff time and resources to the Regional Office and the Palm Springs field office to implementation and administration of the DRECP as part of normal budget allocations for Ecological Services programs.

7.3 Monitoring, Reporting, and Adaptive Management

7.3.1 Monitoring

Permittees and third-parties with take authorization will be responsible for monitoring their project sites throughout all phases of siting, construction, operations and maintenance, and decommissioning. The DRECP Coordination Group will monitor the DRECP Conservation Area, which will include permittee-funded acquired mitigation lands and implementation of appropriate non-acquisition mitigation measures. The DRECP adaptive management program will be informed by the monitoring program and will be managed by the DRECP Coordination Group, as described in Volume II.3.1.5.7 (Preferred Alternative, Implementation Plan, Annual Reporting).

7.3.1.1 Compliance Monitoring

Compliance monitoring includes verifying that (1) incidental take of Covered Species does not exceed the level authorized by the permit, and (2) each permittee is carrying out the terms and conditions of their incidental take permit. Verifying compliance is the primary responsibility of the USFWS. Permittees will monitor the implementation of Covered Activities and CMAs on their project sites and annually report the results to USFWS.

7.3.1.2 Effectiveness Monitoring

Effectiveness monitoring determines whether a permit issued under the GCP is contributing toward achieving the Plan-Wide BGOs, for example by tracking any changes in the status or habitat of Covered Species. Refer to Volume I.3.3.3 (DRECP Biological Planning Process), II.3.1.2.3 (Preferred Alternative, Biological Goals and Objectives), and Appendix C (Biological Goals and Objectives) for a description of the Plan-Wide BGOs. Permittees, with the assistance of USFWS, are primarily responsible for verifying the effectiveness of CMAs on their project sites. The DRECP Coordination Group is responsible for monitoring the effectiveness of the DRECP Conservation Area, which will include permittee-funded acquired mitigation lands and appropriate non-acquisition mitigation measures. Refer to Volume II.3.1.3.4.2 (Preferred Alternative, Plan Implementation, Effectiveness Monitoring).

7.3.1.3 Annual Reporting

To document compliance with the terms and conditions of permits issued under the GCP, each permittee will prepare and submit an annual report by March 31 to the Palm Springs Fish and Wildlife Office for the preceding calendar year. We will provide a copy of the annual report to the DRECP Coordination Group, which will make it available to the public on the DRECP website (<http://www.drecp.org>). The annual report will include: (1) results of biological monitoring at project sites, including the level of take of Covered Species that occurred during the previous year; (2) description and results of any adaptive management activities implemented at project sites; (3) any responses to Changed Circumstances at project sites; and (4) a summary of any unauthorized activities detected at project sites and enforcement actions taken during the previous year.

As part of its oversight of the DRECP Conservation Area, the DRECP Coordination Group will annually report the following to the DRECP Executive Policy Group: (1) the amount of permittee mitigation fees paid into the DRECP conservation endowment; (2) the number of acres and description (with maps) of lands acquired during the previous year as permittee mitigation; (3) the status of Covered Species within the DRECP Conservation Area; (4) any change in existing conditions and adaptive management responses on permittee project sites and mitigation lands within the DRECP Reserve; (5) expenditures for acquisition, monitoring, and management of mitigation lands and appropriate non-acquisition mitigation measures over the previous year; and (6) applicable budgets for the upcoming year. This information will be used by USFWS and the DRECP Coordination Group to document the effectiveness of the GCP and its permittees in contributing toward achieving the Plan-Wide BGOs.

7.3.1.4 Mitigation Timelines (“Stay-Even” Analysis)

The DRECP Conservation Area will be assembled over time, and when assembly is completed, must contain suitable habitats (location and acreage) in a configuration that provides for the conservation of Covered Species. Lands acquired with GCP permittee mitigation fees to mitigate for the effects of incidental take of Covered Species will contribute to assembly of the DRECP Conservation Area. The DRECP Coordination Group will coordinate and oversee implementation of DRECP-wide programs for GCP permittees, such as land acquisition and management, including DRECP Conservation Area lands acquired as mitigation and implementation of appropriate non-acquisition mitigation measures. Permittees will be responsible for paying the mitigation fee (or separate endowment fee, if the permittee is providing mitigation lands for transfer to the DRECP Conservation Area). The USFWS considers that the GCP will be administered appropriately as long as all GCP permittees are in compliance with their individual, severable permits, which will acknowledge that the DRECP Coordination Group will ensure that permittee land acquisition and/or non-acquisition mitigation measures will be implemented within certain timeframes.

The Coordination Group will ensure that the rate of development does not outpace the acquisition of mitigation lands and the implementation of appropriate non-acquisition mitigation measures; i.e., that renewable energy development “stays even” with mitigation. Permittees or holders of third-party take authorizations must pay the mitigation fee to the Coordination Group or otherwise secure the fee before any ground-disturbing activities take place on project sites. In general, as detailed in Volume II.3.1.5.5 (DRECP Biological Conservation and Mitigation Program), all required mitigation will be implemented within 12 months after receipt of the required mitigation fee from the permittee. The Coordination Group, not the permittee, will be responsible for meeting this 12-month standard, unless the Coordination Group (with USFWS concurrence) determines that additional time is necessary and specifies an acceptable time extension. To meet the 12-month standard, the Coordination Group will acquire suitable mitigation lands within 12 months of receipt of the mitigation fee. For approved non-acquisition mitigation measures, the Coordination Group will ensure that certain habitat enhancement features, such as fence construction or initial removal of nonnative invasive plants, are completed within 12 months. For habitat restoration, activities must be initiated within 12 months and completed within 3 years. The Coordination Group will ensure the continuing long-term monitoring and management of the DRECP Conservation Area, including non-acquisition measures, through the MAMP. The Coordination Group also will conduct an annual analysis to show there are sufficient opportunities to acquire new mitigation lands and/or implement non-acquisition mitigation measures before more applications are approved.

7.4 Adaptive Management and Assurances for Unforeseen Circumstances (“No Surprises” Rule)

The DRECP Plan-wide MAMP in Volume II.3.1.3 discusses the USFWS Five-Point Policy on the use of adaptive management strategies for HCPs, including the GCP. Permittees under the GCP will contribute to financing the implementation of the MAMP through payment of their

mitigation fees. The DRECP Coordination Group will be responsible for implementing the MAMP in the DRECP Conservation Area, which will include permittee-funded mitigation lands and non-acquisition mitigation measures, based on the advice and recommendations of the DRECP Adaptive Management Team as described in Volume II.3.1.5.2.4 (Preferred Alternative, Implementation Plan, DRECP Coordination Group). Permittees will be responsible for implementing any project-level changes on their project sites in conformance with the GCP's adaptive management requirements and the terms and conditions of their permit. The Adaptive Management Team will have primary responsibility for developing MAMP monitoring protocols and standards, and for reviewing and analyzing MAMP monitoring data and reports. Permittees will be responsible for any adaptive management responses on their project sites.

The DRECP MAMP anticipates that certain environmental and technological changes will occur throughout the life of the DRECP. We consider certain of these changes as "Changed Circumstances" that must be distinguished from "Unforeseen Circumstances" with respect to ESA "No Surprises" assurances for the GCP. The MAMP allows the DRECP and GCP to be updated as a result of new information on the life history or ecology of Covered Species, or on the effectiveness of minimization and mitigation measures, or other management adjustments that may result from monitoring or research. Based on such new information, conservation measures may be improved, such as technical aspects of mitigation land management and enhancement, implementation of CMAs to avoid and minimize take, and monitoring of Covered Species. The MAMP's general adaptive management strategy is described in Volume II.3.1.3 (Monitoring and Adaptive Management Plan).

7.4.1 Changed Circumstances

Changed Circumstances are defined under the No Surprises Assurances Rule (63 FR 8859, as codified in 50 CFR 17.3, 17.22[b] and 17.32[b]) as changes in circumstances affecting a Covered Species or geographic area covered by a conservation plan, such as the GCP, that can reasonably be anticipated and planned for by permit applicants and USFWS. The GCP incorporates the MAMP's adaptive management process to address the foreseeable conservation adjustments that permittees will implement in response to new information, risk, or uncertainty. These requirements define the limits of the financial commitments required of permittees, and would enable applicants to assess the potential economic impacts of adaptive management responses to Changed Circumstances before agreeing to the terms and conditions of the GCP and providing funding assurances (through the mitigation fee) to implement them. Any permits issued under the GCP must adopt the adaptive management provisions of the DRECP MAMP for responding to Changed Circumstances, as detailed in Volume II.3.1.3 (Monitoring and Adaptive Management Program).

The GCP incorporates the following general process for identifying and responding to Changed Circumstances: (1) preparation of a risk assessment, (2) identification and implementation of preventive measures, and (3) development of a long-term planned response. For expected future conditions within the DRECP Reserve, the DRECP Coordination Group will prepare a risk assessment to predict the probability of Changed Circumstances over the life of the GCP, and determine whether any preventive measures are available that permittees can implement on

project sites and/or that the Coordination Group can implement within the DRECP Conservation Area to prevent or reduce adverse effects to Covered Species. The Coordination Group also will develop a longer-term planned response for adaptive management that includes an impact assessment report, recommended actions to reduce impacts to Covered Species, and additional adaptive strategies such as experimental research or modeling that may be necessary to address uncertainty or lack of information.

Changed Circumstances that potentially could affect permittee Covered Activities at project sites or mitigation lands within the DRECP Conservation Area are defined as future events that are reasonably foreseeable to occur during the life of the GCP and of any permits issued under the GCP, and which may adversely affect Covered Species. Permittees will be responsible for responding to Changed Circumstances on their project sites to ensure that the permitted level of incidental take of Covered Species is not exceeded. Changed Circumstances covered under the GCP and any permits issued under the GCP include the following: (1) prolonged drought; (2) changes in fire frequency, intensity, or extent; (3) increased proliferation of existing nonnative species and/or invasion by new nonnative species; (4) changes in hydrology and groundwater resources (including lowered water tables); (5) changes in renewable energy technologies, including measures to avoid or minimize adverse operational impacts to Covered Species; (6) population declines of Covered Species unrelated to implementation of permits issued under the GCP; (7) the general impacts of climate change on each of these conditions; and (8) new listings of species not covered by the GCP and designation or revision of critical habitat for a Covered or non-covered species. Please refer to Volume II.3.1.3 (Monitoring and Adaptive Management Program) for a description of planned responses to these Changed Circumstances that permittees will be required to implement. The mitigation fee paid by each GCP permittee will include the contingency funding needed to support adaptive management responses under the MAMP for responding to these potential Changed Circumstances.

We anticipate that the adaptive management requirements that apply to Changed Circumstances under the GCP will be updated in the MAMP during the first 5 years of DRECP implementation (i.e., the first 5 years after a ROD for a Final DRECP and Final EIR/EIS is signed), as discussed in Volume II.3.1.3 (Preferred Alternative, Implementation Plan, Monitoring and Adaptive Management Program). During that time, we will work with the DRECP Coordination Group and GCP permittees to refine the adaptive management process for identifying and responding to Changed Circumstances

7.4.2 Changed Circumstances Not Provided for in the GCP

Under the No Surprises Rule at 50 CFR 17.22(b)(5)(ii), the USFWS may not require (1) any conservation or mitigation measures in addition to those provided for under Section 7.4.1 above in response to a changed circumstance; or (2) additional conservation or mitigation measures for any changed circumstance that is not identified in Section 7.4.1 above, without the consent of the permittee, provided the permittee is properly implementing the terms and conditions of their permit issued under the GCP.

7.4.3 Assurances for Unforeseen Circumstances

The purpose of the GCP is to provide for the conservation of Covered Species through implementation of measures required to minimize and mitigate the incidental taking of Covered Species in the course of otherwise lawful and permitted activities within the GCP Permit Area. In accordance with the Habitat Conservation Plan “No Surprises” Assurances Rule (63 FR 8859, as codified in 50 CFR 17.3, 17.22[b] and 17.32[b]), except for unforeseen circumstances as addressed in Section 7.4.3.1 below, the USFWS shall not require from any GCP permittee, without the permittee’s consent, the commitment of additional land or financial compensation or additional restrictions on the use of land or other natural resources with regard to Covered Activities and their impact on Covered Species beyond that provided by the permit issued under the GCP, as long as the permittee is properly implementing the terms and conditions of the permit, the GCP, and Implementing Agreement (IA) (if one is used). No Surprises assurances are attached to an incidental take permit upon issuance; each permittee under the GCP would receive these assurances.

7.4.3.1 Unforeseen Circumstances

“Unforeseen Circumstances” (50 CFR 17.3) means changes in circumstances affecting a species or geographic area covered by a conservation plan or agreement that could not reasonably have been anticipated by plan or agreement developers and the USFWS at the time of the conservation plan’s or agreement’s negotiation and development, and that result in a substantial and adverse change in the status of the covered species. The term “unforeseen circumstances” in the GCP has the same meaning as it is used to define the limit of any permittee’s obligation in the No Surprises regulations set forth in 50 CFR 17.22 (b)(5) and 17.32 (b)(5). No Surprises assurances are conveyed to all who receive incidental take authorizations under any approved HCP, including a programmatic HCP such as the proposed GCP. Permittees under the GCP will be entitled to No Surprises assurances, unless there are changes to a permittee’s Covered Activities that were not previously analyzed, the Covered Activities would cause adverse effects to species not covered by the GCP and permit, or the permit has been revoked.

In deciding whether unforeseen circumstances exist that may warrant requiring additional conservation measures, USFWS shall consider, but not be limited to, the factors identified in 50 CFR 17.22(b)(5)(C) and 17.32(b)(5)(C): (1) the extent of the current range of the affected Covered Species; (2) the percentage of the range of the affected Covered Species and habitat that has been adversely affected by the Covered Activities; (3) the percentage in the range of the affected Covered Species and habitat that has been conserved by the GCP; (4) the ecological significance of that portion of the range or habitat of the affected Covered Species; (5) the level of knowledge about the affected Covered Species and habitat and the degree of specificity of the any permit issued under the GCP for that species or habitat; and (6) whether failure to adopt additional conservation measures would appreciably reduce the likelihood of survival and recovery of the Covered Species in the wild. Furthermore, USFWS shall have the burden of demonstrating that unforeseen circumstances exist, using the best scientific and commercial data available. Any findings of unforeseen circumstances must be clearly documented and based upon

reliable technical information regarding the biological status and habitat requirements of the affected species.

Except where there is substantial threat of imminent, significant adverse impacts to a Covered Species, USFWS shall provide permittees under the GCP at least 60 calendar days written notice of a proposed finding of unforeseen circumstances. During that time, USFWS shall meet with the responsible permittee(s) and the DRECP Coordination Group to discuss the proposed finding, to provide the permittee(s) with an opportunity to submit information to rebut the proposed finding, and to consider any proposed changes to the conservation strategies for the permittees' mitigation lands within the DRECP Conservation Area. If USFWS makes a finding of unforeseen circumstances in accordance with the procedures described above, and determines that additional conservation measures are warranted, such additional conservation measures shall conform to the maximum extent possible to the original terms of the permit issued under the GCP. Additional conservation measures shall be limited to those modifications, restrictions, and agreements described below.

The No Surprises Rule states, in part, that in negotiating responses to unforeseen circumstances, USFWS shall not require, without the consent of the permittee, the commitment of additional land, water, or financial compensation, or additional restrictions on the use of land, water (including quantity and timing of delivery), or other natural resources beyond the level otherwise agreed upon for the Covered Species on the incidental take permit issued under the GCP. If additional mitigation measures are deemed necessary to respond to unforeseen circumstances, and the permittee is properly implementing the terms and conditions of the permit issued under the GCP, we may require additional measures of the permittee only if such measures are limited to modifications within any conserved mitigation areas, or to modifications of the permit's terms and conditions for the conservation of the affected species; we will maintain the original terms and conditions of the permit to the maximum extent possible. Thus, in the event that unforeseen circumstances adversely affect any of the Covered Species during the life of the permit, the permittee, or any third parties with final project approvals that have been granted take authorization would not be required to provide additional financial compensation, land, or land restrictions beyond those required by the permit at the time of issuance without their consent.

7.4.3.2 Responses by Other Entities

As recognized in the No Surprises Rule at 50 CFR 17.22(b)(6) and 17.32(b)(6), nothing in the rule limits or constrains the USFWS, or any Federal, state, or local agency, or private entity from taking additional actions at their own expense to protect or conserve a Covered Species within the GCP Permit Area or DRECP Conservation Area.

7.5 Modifications, Amendments, and Permit Administration

Modifications and amendments of the DRECP are discussed in Volume II.3.1.5.8 (Implementation Plan, Modifications and Amendments). The DRECP Coordination Group will review, and in some cases may propose, modifications or amendments to the DRECP. An amendment is a change to the DRECP that may require an amendment to the GCP or permits

issued under the GCP. A modification is a change to the DRECP that does not require an amendment to the GCP or permits. Similarly, the USFWS and GCP permittees may propose modifications and amendments of the GCP and permits issued under the GCP, which in turn may require a modification or amendment to the DRECP. In certain situations, incidental take authorization may be transferred from a permittee to another qualified entity. A permittee also may discontinue activities covered by a permit, and the unused incidental take levels may be made available under the GCP to other qualified applicants. See Volume II.3.1.6.3 (Take Allocation Assumptions and Approach) for a description of how incidental take will be allocated among the three components of the DRECP (BLM LUPA, CDFW NCCP, and USFWS GCP).

7.5.1 Modifications

Modifications are changes to the GCP or to permits issued under the GCP that involve only administrative changes or negligible, technical details that do not differ significantly from the analysis of effects to Covered Species, the level of incidental take, or a permittee's ability to implement the terms and conditions of the permit issued under the GCP, as described in the GCP and permit as originally approved and issued. A modification to the GCP will not require modifications to the permits issued under the GCP or to any IAs signed by the USFWS and permittees; likewise, a modification to permits issued under the GCP will not require modification to an IA (if used). Examples of issues requiring an administrative change or modification include: (1) clerical errors in the GCP, permits, or IAs (if used); (2) minor corrections to land ownership; (3) minor revisions to survey, monitoring, reporting, or management protocols that do not affect Covered Species or the functions and values of the DRECP Reserve; and (4) updates or corrections to Covered Species occurrence data.

Any permittee or the USFWS may propose a modification to the GCP, the terms and conditions of a permit issued under the GCP, or an IA (if used), by providing written notice to all affected parties (including those receiving third-party take authorization from permittees). The notice must include a description of the proposed modification; an explanation of why the proposed modification is needed; and an analysis of its environmental effects, including any impacts to Covered Species. In addition, the notice must justify why the effects of the proposed modification (1) are not significantly different from, and are biologically equivalent to, the terms and conditions of the GCP or of the permit originally issued under the GCP; (2) substantially conform to the analysis of the GCP as originally approved by the USFWS; and (3) will not significantly reduce the ability of the DRECP Coordination Group or permittee to acquire mitigation lands for inclusion in the DRECP Reserve. The USFWS and affected parties shall submit any comments on a proposed modification in writing within 60 days of receipt of the notice. Any party can request an informal meeting to resolve disagreements concerning modifications, as described in the DRECP Implementation Plan (Volume II.3.1.5.8 [Modifications and Amendments]) and in the IA (if used). Any non-concurrence by the USFWS must occur within 60 days of receipt of the written notice.

7.5.2 Amendments

Amendments are proposed changes to the GCP or to permits issued under the GCP that are not modifications as described above. Any permittee or the USFWS may propose an amendment. Amendments may include, but are not limited to: (1) all amendments not considered as modifications as described above; (2) changes to the boundary of the DRECP Plan Area or GCP Permit Area; (3) changes in the boundaries of the DFAs; (4) addition of actions not included as Covered Activities in the GCP; (5) addition of species to the Covered Species list; (6) changes anticipated in assembly of the DRECP Reserve by the DRECP Coordination Group; or (7) funding strategies and schedules that would have substantial adverse effects on the Covered Species. Amendments shall require the same process followed for the original approval of the GCP, including amendment of the IA (if used). The amendment will require public notification and review, NEPA compliance, and internal USFWS section 7 consultation.

7.5.3 Permit Administration

7.5.3.1 Discontinuance of Permit Activity

As provided for in 50 CFR 13.26, when a permittee discontinues activities for which incidental take has been authorized by permit, the permittee may return the permit to the issuing office together with a written statement surrendering the permit for cancellation. No refund of any fees paid for issuance of the permit or for any other fees or costs associated with a permitted activity shall be made when a permit is surrendered for cancellation for any reason prior to the expiration date stated on the face of the permit. In addition, the permittee must provide written documentation to the USFWS that any incidental take that has already occurred under the permit has been minimized and mitigated to the maximum extent practicable and that all other permit terms and conditions have been fulfilled up until the time of the requested cancellation. Upon surrender of the permit, no further take will be authorized under the permit. The permit will be deemed cancelled only upon our determination that the required minimization and mitigation measures have been implemented (50 CFR 17.22(b)(7) and 17.32(b)(7)). Any remaining incidental take levels for Covered Species after surrender of a permit will be considered available to other qualified applicants under the GCP, as described in Volume II.3.1.6.3 (Take Allocation Assumptions and Approach).

7.6 Other Measures

According to ESA section 10(a)(2)(A)(iv), a conservation plan must specify such other measures that the Secretary of the Department of the Interior (DOI) may require as being necessary or appropriate for the purposes of the plan. The following subsections describe other information applicants must provide to clarify how they will meet the terms and conditions of the requested permit, or to ensure that the permit complies with other relevant laws and regulations.

7.6.1 Implementing Agreement (IA)

An applicant under the GCP may request an IA in conjunction with a proposed permit. An IA is a document that clarifies the roles and responsibilities of multiple parties that are implementing a plan, and summarizes the commitments of each party under the plan. An IA is not a contract; rather, the permit terms and conditions are the binding authorization for the permittee. The IA is useful under certain circumstances to provide a common understanding of the activities that will be undertaken to implement the permit terms and conditions. The applicant and USFWS, and any other parties that would be involved in implementing the terms and conditions of a permit, would sign the agreed-upon IA before USFWS makes the final decision on permit issuance.

7.6.2 Five-Point Policy

The following are requirements under the USFWS Five-Point Policy, as discussed in Volume I.2.2 (Legal Framework, U.S. Fish and Wildlife Service):

- Biological goals and objectives (BGOs) – The GCP will contribute toward achieving the Plan-Wide BGOs that underlie the DRECP, which are described in Volume I.3.3 (DRECP Biological Planning Process) and Appendix C (Biological Goals and Objectives). We will certify, as appropriate, in our Findings statement for the GCP and each incidental take permit application under the GCP that the GCP and permits will contribute to the DRECP’s Plan-Wide BGOs.
- Adaptive management – Refer to Section 7.4 above and Volume II.3.1.3 (Monitoring and Adaptive Management Program). We will certify, as appropriate, in our Findings statement for the GCP and each incidental take permit application under the GCP that the GCP and permits will implement appropriate adaptive management requirements, as described in this Appendix M and in the MAMP.
- Monitoring for compliance with permit terms and conditions and for effectiveness in meeting BGOs – Refer to Section 7.3.1 above.
- Permit duration – The DRECP and GCP, if approved, will be in effect through 2040. Individual applicants may request a shorter permit duration. A longer duration will require renewal or amendment of the GCP and any permits issued under the GCP to extend beyond 2040.
- Public participation – The proposed GCP is an integral component of the interagency DRECP evaluated in the Draft DRECP and Draft EIR/EIS, for which the REAT agencies provide a 90-day public comment period.

7.6.3 Migratory Bird Treaty Act

Please refer to Volume I.2.2 (Legal Framework, U.S. Fish and Wildlife Service) of the Draft DRECP and Draft EIR/EIS for a discussion of the regulatory framework related to the Migratory Bird Treaty Act (MBTA). For species listed under both the ESA and MBTA, the USFWS has the authority to authorize incidental take with special terms and conditions under Section 10(a)(1)(B) of the ESA and allow the incidental take permit also to serve as a Special Purpose Permit under the MBTA (50 CFR 21.27). Special Purpose Permits are required in the event that an action

would take, possess, or involve the sale or transport of birds protected by the MBTA. For Covered Species that are listed under both the ESA and MBTA, the CMAs in Volume II.3.1.2.5 (Biological Conservation and Management Actions) include measures to avoid and minimize take of migratory birds. For permits issued under the GCP, a MBTA Special Purpose Permit will be incorporated into the 10(a)(1)(B) permit for ESA-listed species that are also protected by the MBTA; any such take would not be in violation of the MBTA.

7.6.3.1 Covered Species Listed under the ESA

The Habitat Conservation Planning and Incidental Take Permit Processing Handbook (HCP Handbook) (USFWS and NOAA/NMFS 1996) provides for a permit issued under the GCP to also function as a MBTA Special Purpose Permit authorized under 50 CFR 21.27. However, the HCP Handbook specifies that the following conditions must be satisfied before this protection applies: (1) any species to be so treated with respect to the MBTA must also be listed under the ESA; and (2) the incidental take of any such species must be authorized, subject to applicable terms and conditions, under section 10(a)(1)(B) of the ESA. We believe this approach is warranted because the permittee already will have agreed to a package of mitigation measures designed to minimize and mitigate the take of the listed species of migratory birds to the maximum extent practicable. In qualifying cases, the following language concerning MBTA-protected species will be included in the terms and conditions of a section 10 permit when the above conditions have been satisfied: “This permit also constitutes a Special Purpose Permit under 50 CFR 21.27 for the take of [*provide species common and scientific names*] in the amount and/or number and subject to the terms and conditions specified herein. Any such take will not be in violation of the Migratory Bird Treaty Act of 1918, as amended (16 U.S.C. 703-712).”

7.6.3.2 Non-Covered Species and Covered Species Not Listed under the ESA

For avian species that are not included as Covered Species under the GCP, and for Covered Species that are not listed under the ESA, we must ensure that impacts to those migratory birds are considered as part of our trust responsibilities. Under ESA section 10(a)(1)(B), the Secretary of the DOI may permit, under such terms and conditions as she/he shall prescribe, any taking otherwise prohibited by section 9(a)(1)(B) if such taking is incidental to, and not the purpose of, the carrying out of an otherwise lawful activity. To issue incidental take permits under the GCP, therefore, we must ensure that the taking we are authorizing is incidental to otherwise lawful activities; i.e., that Covered Activities also comply with other relevant laws and regulations, including MBTA. Therefore, for projects that are likely to impact migratory birds, as a term and condition of the GCP we will require applicants to provide a project-specific Bird and Bat Conservation Strategy (BBCS) outlining how the proposed project or program will minimize impacts to bird species protected under MBTA. Agencies and jurisdictions who obtain an incidental take permit under the GCP and who intend to extend their take authorization to third-parties must require those parties to provide a project-specific BBCS.

Proponents of Covered Activities that would likely impact bird species during project construction, operation, and maintenance will develop and implement a project-specific BBCS

that meets the approval of the USFWS and CDFW. The BBCS will be submitted with the proponent's application for an incidental take permit under the GCP. The goal of the project-specific BBCS will be to demonstrate a proponent's good faith effort to avoid and minimize direct mortality of birds from the construction, operation, and maintenance of the specific wind, solar, geothermal, or transmission project. The project-specific BBCS will use applicable USFWS and CDFW guidelines for operations (such as the USFWS *Land-Based Wind Energy Guidelines* and the California *Guidelines for Reducing Impacts to Birds and Bats from Wind Energy Development*), and address the specific measures for avoidance and minimization, monitoring plans, and reporting requirements for bird impacts during operations. The BBCS development process discussed in the USFWS and CDFW wind energy guidelines also may be adapted for any BBCS required for other renewable energy technologies that are likely to impact migratory birds. Each BBCS will be created on a project-by-project basis by incorporating a variety of available measures that are applicable to the specific project and that together meet the approval of the USFWS and CDFW for sufficiently avoiding, minimizing, and adaptively monitoring and managing impacts to bird species during project operations.

The monitoring and adaptive management actions for impacts to birds during operations will be determined in the project-specific BBCS. Measures in the MAMP (Volume II.3.1.3) may be incorporated into the project-specific BBCS as appropriate. The monitoring and reporting aspects of each BBCS will be designed to be compatible with information from any pre-construction or construction surveys and MAMP studies. The BBCS will determine the appropriate procedures for monitoring that will provide project-specific information on annual operational effects on birds and bats and that will include triggers that dictate the type of avoidance or minimization response that is required.

7.6.3.2.1 Guidance for Preparing a Project-Specific BBCS

The Plan-wide Biological CMAs (Volume II.3.1.2.5) include avoidance and minimization measures that are typically appropriate for a project-specific BBCS, including measures that reduce disturbed areas, avoid attracting birds and bats to dangerous project areas, prevent collisions, reduce predator subsidies and perches, and limit bird and bat exposure to hazardous materials. Other measures that may be incorporated or appropriately adapted for a project-specific BBCS include:

- Evaluation and installation of the best bird and bat detection and deterrent system available at the time of construction. For solar projects, these detection and deterrent systems will be configured to prevent bird species from flying over the site by day, and especially from flying into the project's concentrating radiant flux zone. Passive deterrents may be configured to break up light-polarizing surfaces to minimize avian recognition and collision conflicts. For wind projects, a detection and deterrent system will be configured to prevent bird and bat species from flying into the project's rotor-swept area.
- Utilizing unguyed monopole towers or tubular towers to reduce Common Raven perches as well as bird and bat collisions.

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

- Minimizing the use of guywires. Where the use of guywires is unavoidable, demarcate guywires using the best available methods to minimize bird strikes.
- Siting and designing Covered Activities to avoid high bird and bat movement areas that will separate birds and bats from their common nesting and roosting sites, feeding areas, or lakes and rivers.
- When fencing is necessary, using bird and bat compatible design standards.
- Using lighting that does not attract birds and bats or their prey to project sites, including using non-steady burning lights (red, dual red and white strobe, strobe-like flashing lights) to meet Federal Aviation Administration requirements, using motion or heat sensors and switches to reduce the time when lights are illuminated, using appropriate shielding to reduce horizontal or skyward illumination, and avoiding the use of high-intensity lights (sodium vapor, quartz, halogen).
- Instituting a vehicle speed limit on the project site to reduce the risk of vehicle collisions with birds and bats.
- Implementing a robust monitoring program to regularly check for wildlife carcasses, document cause of mortality, and promptly remove them.
- Avoiding the use of habitat improvements, including ponds, guzzlers, rock or brush piles, and bird nest boxes on or near project sites with potential bird and bat hazards.
- Reusing or co-locating new transmission facilities and other ancillary facilities with existing facilities on disturbed areas to reduce habitat destruction and avoid additional collision risks.
- Installation of flight diverters on transmission lines according to the most current Wildlife Agencies guidelines, as described in CMA AM-TRANS-2 in Volume II.3.1.2.5 (Biological Conservation and Management Actions).
- During project siting and design, monitoring of bird and bat presence and use of the project site, using the most current survey methods and best procedures available at the time. This pre-project and pre-operations information will serve as the baseline from which to monitor and measure project operations in the future.
- Utilizing project designs and project operations that minimize the reflectivity (acoustic and visual/polarizing) and exposure duration of reflective surfaces to avian species (e.g., vertically aligning solar panels during the night, using reduced reflectivity in material choices or applications).
- Incorporating a bird and bat use and mortality monitoring program during operations, using current protocols and best procedures available at time of monitoring. This monitoring program will ensure that the information collected during operations is reported to the DRECP Coordination Group in a way that is compatible for use in the MAMP.
- Restoring or enhancing habitat in conserved areas that benefit (through increased carrying capacity or fecundity) the populations of impacted bird and bat species. Potential actions may include nest site/roost enhancement, nest site/roost creation, and foraging habitat restoration/enhancement.
- Reducing threats by actions that benefit the populations of impacted bird and bat species. Potential actions include:
 - Protecting nest sites and roosts.

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

- Retrofitting or undergrounding transmission lines. Power line retrofitting according to current Avian Power Line Interaction Committee (APLIC) standards could reduce the risk of future electrocutions, and undergrounding transmission lines would remove the threat.
- Buying wind rights at existing operational facilities.
- Reducing other forms of impacts to birds (e.g., fencing to exclude feral and outdoor cats).
- Implementing project-specific avoidance and minimization actions that reduce the level of operational impacts to the populations of bird and bat species. Potential actions may include:
 - Radar systems associated with wind turbine shutdown.
 - Wind turbine cut-in speed restrictions.
 - Night-time solar panel positioning to decrease surface areas exposed to avian species.

7.6.4 National Historic Preservation Act

The USFWS's proposed issuance of ESA section 10(a)(1)(B) incidental take permits for activities covered under the GCP constitutes an undertaking under Section 106 of the National Historic Preservation Act of 1966, as amended (NHPA) (16 U.S.C 470 et seq.). The NHPA section 106 consultation with SHPO and tribes will consider the impacts to cultural resources that could result from our authorization of incidental take of Covered Species. USFWS defines the Area of Potential Effect (APE) for the GCP as the site-specific locations where the activities that would result in incidental take would occur on the ground, and where any historic properties may be affected by the proposed undertaking (i.e., incidental take authorization). For the GCP, the APE would be all non-Federal lands within the DFAs that are open to project applicants for ground disturbance associated with renewable energy development, areas where permittee mitigation lands would be managed by the DRECP Coordination Group, and areas where permittee non-acquisition measures may be implemented.

The Section 106 regulations set forth a process by which agencies evaluate the effects of any Federal undertaking on historic properties (properties included in, or eligible for inclusion in, the National Register of Historic Places). Accordingly, USFWS will consult with the State Historic Preservation Officer (SHPO), Tribal Historic Preservation Officers (THPOs), and other appropriate consulting parties regarding the identification and evaluation of historic properties, assessment of effects on historic properties, and the resolution of adverse effects. We will also consult with appropriate American Indian Tribes (Tribes) to determine whether they have concerns about historic properties of religious and cultural significance in areas of these Federal undertakings. We must also consult with any interested parties who are "individuals and organizations with a demonstrated interest in the project due to the nature of their legal and economic relation to the undertaking or affected properties, or their concern with the undertaking's effect on historic properties" [36 CFR § 800.2(c)(5)]. Consultation with the THPO is required for projects on Tribal lands, and consultation with Tribes, including those that are not federally recognized, that have a historical association with a project area is also required. Please note that no Tribal lands are included within the DFAs.

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

In addition, we will also consult with appropriate Tribes on the GCP's inclusion of golden eagles as a Covered Species, to determine whether the Tribes have concerns about historic properties of religious and cultural significance in areas of Federal undertakings associated with our issuance of permits under the GCP. Some Tribes and tribal members may consider eagle nests sacred sites provided for in the American Indian Religious Freedom Act (42 U.S.C. 1996), of which some are frequently referred to as Traditional Cultural Properties (TCPs), and as potential historic properties of religious and cultural importance under the NHPA. Such sites are not limited to currently-recognized Indian lands, and they occur across the entire aboriginal settlement area. Properties of religious and cultural importance may be areas where eagles nest and have nested within living memory, their presence becoming a contributing element for determining eligibility under NHPA (King 2006, Tanji 2008). Thus, a landform or landscape known for eagle habitation (ridgeline, canyon, lakeshore, river valley, mesa, mountain, etc.) may be considered by Tribes as suitable for designation as a property of religious or cultural importance. We will coordinate with the SHPO to ensure necessary NHPA consultations take place with the appropriate parties. We will comply with Section 106 on a case-by-case basis for permit applications that have the potential to affect historic properties. If all parties determine it is more efficient, we may also consult with appropriate stakeholders to develop a Programmatic Agreement that will govern and resolve the compliance with NHPA for the issuance of permits under the GCP for incidental take of ESA-listed species and unintentional take of eagles or eagle nests. The Programmatic Agreement will establish the conditions permit applicants will be required to implement to assess the potential effects on historic resources that would result from site-specific projects, and to mitigate any adverse effects.

7.6.5 Tribal Consultation

The USFWS's purpose for consulting with Tribes is to coordinate an exchange of information regarding our proposed action in the DRECP (i.e., issuing incidental take permits under the GCP). We will meet with interested individual Tribes on a government-to-government basis as required by the following Federal policies:

- Executive Order 13175 (2000) on consultation and coordination with Indian Tribal Governments
- Secretarial Order 3206 (1997) for actions we are considering under the Endangered Species Act
- Secretarial Order 3317 (2011) on Department of the Interior policy for consultation with Indian Tribes regarding Departmental actions with Tribal implications
- President Clinton's (1994) and President Obama's (2009) Memoranda on government-to-government relations and tribal consultation
- The Service's Native American Policy (1994) on our government-to-government relationship to Indian Tribal governments for fish and wildlife conservation

We intend to consult with Tribes on three major issues regarding the GCP: (1) government-to-government consultation on the proposed GCP; (2) NHPA section 106 consultation for the GCP; and (3) NHPA section 106 consultation on issuance of permits under the GCP for take of golden eagles as a Covered Species under the GCP and any incidental take permits issued under the GCP. We consider the joint BLM-USFWS Tribal Leadership Meetings described in Volume

III.09 (Native American Interests) as part of ongoing government-to-government consultation with Tribes on our ESA responsibilities. We will conduct ongoing meetings, in some cases jointly with BLM, with individual Tribes to initiate NHPA section 106 consultation for the GCP.

8.0 COVERED SPECIES ACCOUNTS

Please refer to Appendix Q (Baseline Biology Report).

9.0 EFFECTS ANALYSIS

Please refer to Volume IV.7.2 (Typical Impacts Common to All Action Alternatives) and Volume IV.7.3.2.4 (Impacts of the GCP) for a narrative description and analysis of the impacts of Covered Activities on Covered Species under the GCP.

9.1 Incidental Take Documentation

Table 9.1-1 below provides information on anticipated take levels and mitigation required for each Covered Species under the GCP component of the interagency Preferred Alternative (1) for the entire GCP Plan Area, and (2) by ecoregion subarea or subunit. The first page of Table 9.1-2 addresses the entire GCP Plan Area; the far-right column – “Is There Enough Area in the Interagency Plan-Wide Conservation Priority Area to Support All Mitigation?” – indicates at a glance whether adequate mitigation acreage is available within the entire GCP Plan Area to mitigate the effects of take for each Covered Species by (1) acquisition from willing sellers of CPA lands and non-Federal inholdings within Existing Conservation Areas and BLM LUPA Conservation Designations, and (2) implementation of equivalent non-acquisition mitigation measures.

Table 9.1-2 indicates that insufficient non-Federal lands are available to mitigate the effects of incidental take for some species in some subareas or subunits. In such cases, there are options to ensure that the effects of take will be minimized and mitigated to the maximum extent practicable. For example, suitable mitigation lands may be available for acquisition in a different subarea/subunit from where the take occurs. If necessary, it may also be appropriate to implement non-acquisition mitigation measures for such species on BLM LUPA Conservation Designations outside the GCP Permit Area (i.e., within the GCP Plan Area in the Interagency Plan-Wide Conservation Priority Area).

As shown in Table 9.1-2, there are insufficient lands available within the entire GCP Plan Area for acquisition and non-acquisition measures combined to mitigate the effects of incidental take of Greater Sandhill crane and mountain plover. These species occur mostly in agricultural areas of the Imperial Valley, Palo Verde Valley, and West Mojave. The DRECP Agricultural Lands Conservation Strategy described in Appendix H (CMAs Documentation) relies on application of avoidance and compensation CMAs to protect and benefit these two agriculture-reliant species. We anticipate impacts to Greater Sandhill crane roosting habitat will be largely avoided in all DFAs through implementation of CMA AM-DFA-AG-6 (i.e., avoid impacts to all Greater Sandhill crane roosting sites and site Covered Activities away from roosting sites to the

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

maximum extent practicable), as described in Volume II.3.1.2.5 (Biological Conservation and Management Actions). In addition, other CMAs contain avoidance and setback provisions for managed wetlands, the Mojave River, and agricultural drains that will conserve wetland and riparian features within the agricultural matrix and provide conservation benefits to Covered Species generally associated with agricultural lands, including Greater Sandhill crane and mountain plover.

Impacts to agricultural foraging and/or wintering habitat for Greater Sandhill crane and mountain plover will be addressed through the Agricultural Lands Conservation Strategy requirement to mitigate the loss of agricultural habitat in the Imperial Valley, Palo Verde Valley, and West Mojave. Impacts to Greater Sandhill crane and mountain plover foraging and/or wintering habitat will be mitigated by acquisition of lands for the DRECP Conservation Area according to the DRECP agricultural species compensation approach described in Appendix H (CMAs Documentation). A combination of native desert habitat and key agricultural habitat areas will be conserved, managed, and/or acquired as appropriate at a compensation ratio of 1:1 to offset foraging and/or wintering habitat loss. Although conservation of natural desert habitat will be prioritized, conservation of key agricultural areas may account for up to 50% of the conservation requirement. Because there are insufficient lands available within the various conservation categories shown in Table 9.1-2 for acquisition and non-acquisition measures for Greater Sandhill crane and mountain plover, we expect the effects of take of those species would be adequately mitigated by allowing conservation of key agricultural areas for these species within the Imperial Valley DFA. For Greater Sandhill crane, management and restoration of wetland and riparian habitats adjacent to known roosting sites within the DFA will increase nesting/roosting opportunities and buffer known key roosting areas. For mountain plover, acquisition of agricultural conservation easements within the DFA will maintain appropriate foraging and wintering habitat.

Table 9.1-1 provides the following information for each Covered Species included in the GCP:

- Baseline acreage of modeled habitat for each Covered Species available within the DRECP Plan Area, by subarea or subunit
- Acreage of ground disturbance resulting from Covered Activities on non-Federal lands within the DFAs (i.e., incidental take as measured by the surrogate of permanent ground disturbance of species modeled habitat), after application of avoidance and minimization CMAs
- Acreage of acquisition lands required at appropriate species-specific compensation ratios to mitigate the effects of incidental take
- Acreage of acquisition lands available from willing sellers within CPAs and non-Federal inholdings within Existing Conservation Areas and BLM LUPA Conservation Designations
- Acreage of lands within BLM LUPA Conservation Designations in the Interagency Plan-Wide Conservation Priority Area available for potential implementation of non-acquisition mitigation measures
- Anticipated number of birds and bats killed by operation of renewable energy facilities

Table 9.1-2 provides color codes indicating whether acreage of appropriate acquisition lands is available within the CPA and non-Federal inholdings portions of the Interagency Plan-Wide Conservation Priority Area. In such cases, implementation of non-acquisition mitigation measures will be required to result in adequate mitigation for the effects of incidental take.

9.2 Critical Habitat

Critical habitat is defined in ESA section 3(5)(A) as (1) the specific areas within the geographical area occupied by the species, at the time it is listed in accordance with the ESA, on which are found those physical or biological features essential to the conservation of the species, and which may require special management considerations or protection; and (2) specific areas outside the geographical area occupied by the species at the time it is listed, upon a determination that such areas are essential for the conservation of the species. Critical habitat designations identify, to the extent known using the best scientific and commercial data available, those physical and biological features that are essential to the conservation of the species, including space for individual and population growth and for normal behavior; food, water, air, light, minerals, or other nutritional or physiological requirements; cover or shelter; sites for breeding, reproduction, or rearing (or development) of offspring; and habitats that are protected from disturbance or are representative of the historical, geographical, and ecological distributions of a species.

ESA section 7(a)(2) requires Federal agencies, including USFWS, to ensure that any action they fund, authorize, or carry out is not likely to jeopardize the continued existence of any endangered species or threatened species, or result in the destruction or adverse modification of designated critical habitat of such species. Our proposed issuance of incidental take permits under the GCP is a Federal action for which we must conduct an internal section 7 consultation on the effects of take on Covered Species, including whether Covered Activities would destroy or adversely modify any designated critical habitat on non-Federal lands within the DFAs. USFWS has designated critical habitat for five Covered Species, as shown in Table II.3-2 in Volume II.3.1.2.2 (DRECP Proposed Covered Species List). In addition, we have designated critical habitat for 14 other species that are not included as Covered Species; we must also analyze the effects of Covered Activities on critical habitat for those species.

Volume III.7.6.2 (Covered and Planning Species Modeled Habitat) discusses critical habitat for Covered Species and non-covered species, and Volume IV.7.3.2 (Impact Analysis by Alternative, Preferred Alternative) discusses impacts to critical habitat. Table 9.2-1 shows the baseline acreages of critical habitat that occur within the DRECP Plan Area for each species (Covered and non-covered), and the acres that will be impacted by Covered Activities within the non-Federal DFA lands in the GCP Permit Area.

Table 9.2-1 shows that very little critical habitat will be impacted on non-Federal lands within the DFAs by any permits issued under the GCP. Overall within the GCP Permit Area, renewable energy development on non-Federal lands will affect critical habitat only for desert tortoise (about 1,416 acres) and Lane Mountain milk-vetch (about 4 acres). Critical habitat impacts will be less than an acre for arroyo toad and southwestern willow flycatcher. We will analyze whether

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

this critical habitat is destroyed or adversely modified in our internal section 7 consultation for the GCP. Under ESA statutory provisions, we determine destruction or adverse modification of critical habitat on the basis of whether, with implementation of the proposed Federal action, the affected critical habitat would continue to serve its intended conservation role for the species. The role of critical habitat is to support life-history needs of the species and provide for the conservation of the species. Activities that may destroy or adversely modify critical habitat are those that alter the physical or biological features to an extent that appreciably reduces the conservation value of critical habitat for the species. We anticipate that any impacts to critical habitat will be adequately addressed by implementation of landscape-level, community-level, and species-specific CMAs. We will document our analysis of critical habitat impacts for Covered Species and non-covered species in our Findings statement for each permit decision.

Very little critical habitat has been designated for desert tortoise on non-Federal lands in the DRECP Plan Area. However, limited transmission impacts to desert tortoise critical habitat may occur on non-Federal lands within CPAs that are acquired for permittee mitigation in the DRECP Conservation Area. We expect that any impacts to desert tortoise critical habitat within the CPAs will be minimal, and will be addressed through the implementation of non-acquisition mitigation measures, as described in Table H-8 (Eligible Compensation Actions for Impacts to DRECP Covered Species) of Appendix H (CMAs Documentation).

On August 15, 2014, the USFWS proposed to designate critical habitat for the western distinct population segment (DPS) of the yellow-billed cuckoo (*Coccyzus americanus*) (79 FR 48548). USFWS proposed to list the DPS as threatened on October 3, 2013 (78 FR 61621). The proposed critical habitat rule includes designations within the DRECP Plan Area on both Federal and non-Federal lands along the Colorado River and Owens River. The proposed listing rule became available too late for the Draft DRECP and Draft EIR/EIS print deadline; consequently, we could not include an analysis of impacts to any non-Federal proposed critical habitat that may occur within the GCP Plan Area.

10.0 OVERVIEW OF SALTON SEA INCREMENTAL HABITAT PLAN

The IID is a member agency of the Salton Sea Authority (SSA), with Riverside and Imperial Counties, the Torres-Martinez Desert Band Cahuilla Indians, and Coachella Valley Water District. The SSA is developing a Salton Sea Restoration Plan (Restoration Plan) based on current and modeled data relating to water quality and quantity, and the results of extensive science over the last decade. Because implementing a full-scale Restoration Plan may require up to 10 years, the SSA is developing the Incremental Plan to address near-term needs at the Salton Sea. The Incremental Plan is an adaptive management program that establishes an overall framework and various metrics for developing and managing a series of renewable energy and habitat restoration projects around the Salton Sea perimeter. Mitigation fees for renewable energy projects would fund the habitat restoration projects, as appropriate, if IID applies for and receives a permit under the GCP.

All portions of the Salton Sea's exposed playa have a potential for solar and geothermal renewable energy development, including a proven resource in the Known Geothermal Resource

Area in the south/southeast portion of the sea. Successful implementation of a renewable energy funding component for the long-range Salton Sea Restoration Plan and the Incremental Plan would require the development of an adequate electrical transmission system to carry the energy outside of the Salton Sea basin. As mitigation for renewable energy Covered Activities, the Incremental Plan would include development of a mosaic of wildlife habitat in conjunction with renewable energy development (primarily geothermal) in selected areas of the exposed playa. The types of habitat constructed to mitigate for the impacts of renewable energy development would vary based on the identified need for specific habitat types and site logistics, and could vary from shallow water to deeper water, and from permanently inundated to pulse or seasonally flooded; areas of mesic habitat may also be possible.

11.0 PENDING APPLICATIONS FOR PERMITS UNDER THE GCP

CEC and CSLC are requesting permits for incidental take in conjunction with renewable energy Covered Activities for their respective renewable energy license and lease programs. Information required to supplement the CEC and CSLC applications is provided here for public review, as required by ESA Section (10)(c). We will decide whether to issue the permits after considering public comments on these supplementary application materials and on the proposed GCP in the Draft DRECP and Draft EIR/EIS, completion of an internal USFWS section 7 consultation on the GCP, completion of a Findings statement on the GCP, and our signing of a ROD for the Final DRECP and Final EIR/EIS.

11.1 CALIFORNIA ENERGY COMMISSION APPLICATION MATERIALS

CEC has submitted a Federal Fish and Wildlife Permit Application Form 3-200-56 for USFWS consideration of incidental take authorization for the CEC renewable energy licensing program. The application incorporates the USFWS GCP in this Appendix M and the Draft DRECP and Draft EIR/EIS by reference. Additional information provided here to supplement the application form includes the following:

- Figure II.3-8, Map of Preferred Alternative – GCP (where CEC will license thermal projects within DFAs)
- Attachment A, Description of CEC Licensing Program
- Attachment B, CEC Estimated Impacts to Covered Species
- Attachment C, CEC Estimated Impacts to Critical Habitat

11.2 CALIFORNIA STATE LANDS COMMISSION APPLICATION MATERIALS

CSLC has submitted a Federal Fish and Wildlife Permit Application Form 3-200-56 for USFWS consideration of incidental take authorization for the CSLC renewable energy lease program. The application incorporates the USFWS GCP in this Appendix M and the Draft DRECP and Draft EIR/EIS by reference. Additional information provided here to supplement the application form includes the following:

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

- Figure I.0-5, Map of CSLC Lands within DRECP Plan Area (where CSLC will lease lands for renewable energy projects within DFAs)
- Attachment A, Description of CSLC Licensing Program
- Attachment B, CSLC Estimated Impacts to Covered Species
- Attachment C, CSLC Estimated Impacts to Critical Habitat

PUBLIC REVIEW DRAFT
August 18, 2014
GENERAL CONSERVATION PLAN

**APPENDIX M – PROPOSED GENERAL CONSERVATION PLAN
OUTLINE OF TOPIC SECTIONS**

- 1.0 INTRODUCTION AND REGULATORY BACKGROUND
- 2.0 PROPOSED GCP PERMIT AREA, GCP PLAN AREA, AND BASELINE FOR COVERED SPECIES
- 3.0 COVERED ACTIVITIES
- 4.0 PROPOSED INCIDENTAL TAKE OF COVERED SPECIES
- 5.0 PROPOSED MINIMIZATION AND MITIGATION MEASURES
 - 5.1 Conservation and Management Actions (CMAs)
 - 5.2 Maximum Extent Practicable
- 6.0 ALTERNATIVES TO THE TAKING PROPOSED IN THE GCP
- 7.0 GCP IMPLEMENTATION
 - 7.1 Application Process
 - 7.1.1 Applicant Responsibilities
 - 7.1.2 DRECP Coordination Group Responsibilities
 - 7.1.3 USFWS Approval
 - 7.2 Funding Assurances
 - 7.2.1 Applicant Funding Assurances for Implementing Permit Terms and Conditions
 - 7.2.2 USFWS Funding Assurances for Administering the GCP
 - 7.3 Monitoring and Reporting
 - 7.3.1 Monitoring
 - 7.3.1.1 Compliance Monitoring
 - 7.3.1.2 Effectiveness Monitoring
 - 7.3.1.3 Annual Reporting
 - 7.3.1.4 Mitigation Timelines (“Stay-Even” Analysis)
 - 7.4 Adaptive Management and Assurances for Unforeseen Circumstances (“No Surprises” Rule)
 - 7.4.1 Changed Circumstances
 - 7.4.2 Changed Circumstances Not Provided for in the GCP
 - 7.4.3 Assurances for Unforeseen Circumstances
 - 7.4.3.1 Unforeseen Circumstances
 - 7.4.3.2 Responses by Other Entities
 - 7.5 Modifications, Amendments, and Permit Administration
 - 7.5.1 Modifications
 - 7.5.2 Amendments
 - 7.5.3 Permit Administration
 - 7.5.3.1 Discontinuance of Permit Activity
 - 7.6 Other Measures
 - 7.6.1 Implementing Agreement (IA)
 - 7.6.2 Five-Point Policy
 - 7.6.3 Migratory Bird Treaty Act
 - 7.6.3.1 Covered Species Listed under the ESA
 - 7.6.3.2 Non-Covered Species and Covered Species Not Listed under the ESA
 - 7.6.3.2.1 Guidance for Preparing a Project-Specific BBCS
 - 7.6.4 National Historic Preservation Act
 - 7.6.5 Tribal Consultation
- 8.0 COVERED SPECIES ACCOUNTS
- 9.0 EFFECTS ANALYSIS
 - 9.1 Incidental Take Documentation
 - 9.2 Critical Habitat
- 10.0 OVERVIEW OF SALTON SEA INCREMENTAL HABITAT PLAN
- 11.0 PENDING APPLICATIONS FOR PERMITS UNDER THE GCP
 - 11.1 CEC Application
 - 11.2 CSLC Application

Subarea or Subunit	Covered Species by Subarea or Subunit and Taxonomic Group (Subunit areas = non-overlapping [unique] acres of modeled habitat) (Species areas = acres [non-unique] of modeled habitat may overlap)	TOTAL Available Lands (baseline acres of modeled habitat)	Impacts (acres) of Terrestrial Construction (Geothermal, Solar, Transmission, Wind) and Operations (Geothermal, Solar, Transmission)			Impacts (individuals) of Operations on the Number of Birds and Bats (Geothermal, Solar, Transmission, Wind)	Conservation Strategy	Average Compensation Ratio	TOTAL Estimated Mitigation Required (acres)	Percent of Total Mitigation Fee Eligible for Non-Acquisition Mitigation	RD_A: Priority Conservation Planning Areas (Non-Federal)	RD_B: Non-Priority Conservation Planning Areas (Non-Federal)	RD_C: Priority BLM LUPA Conservation Designations (Non-Federal Inholdings)	RD_D: Non-Priority BLM LUPA Conservation Designations (Non-Federal Inholdings)	RD_E: Non-Acquisition Mitigation Areas Outside GCP Permit Area	Non-Acquisition Mitigation Areas Inside GCP Permit Area (subset of RD_C; Non-Federal Inholdings)	Percent Area of RD_C Allowed as GCP Non-Acquisition Mitigation	RD TOTAL: Conservation Areas Available for GCP Mitigation

11.1 California Energy Commission Application Materials – Summary

California Energy Commission Application for Incidental Take Permit under Section 10 of the Endangered Species Act

The U.S. Fish and Wildlife Service (USFWS) General Conservation Plan (GCP) provides the non-Federal incidental take permitting process for the Desert Renewable Energy Conservation Plan (DRECP), and is contained in Appendix M of the Draft DRECP and Draft Environmental Impact Report/Environmental Impact Statement (EIR/EIS). The California Energy Commission (CEC) has submitted an application to USFWS for a permit under the GCP for its renewable energy licensing (certification) program. CEC intends the permit application to be fully consistent with the terms and conditions of the GCP. The CEC application incorporates by reference the USFWS GCP (Appendix M) and the Draft DRECP and Draft EIR/EIS.

The GCP incorporates the DRECP's Covered Species, a subset of the DRECP's Covered Activities for renewable energy development, Biological Conservation and Management Actions (CMAs), and comprehensive conservation strategy (biological goals and objectives and DRECP Plan-wide Reserve Design Envelope). CEC's requested permit under the GCP also will incorporate these DRECP elements. Upon permit issuance, CEC will extend its "master" take authorization to license applicants for development of renewable energy projects using the technologies under CEC's jurisdiction (i.e., solar thermal and geothermal facilities producing 50 megawatts or more of electricity). As a condition of project certification, CEC will require all licensees to implement the terms and conditions of CEC's incidental take permit on their project sites. In particular, CEC will (1) monitor licensee compliance with the permit terms and conditions, and (2) take action to enforce compliance with the permit terms and conditions if necessary.

The CEC "master" permit under the GCP will provide a programmatic process for CEC to extend its incidental take authorization to qualified third parties under its direct control, and is functionally a subset of the programmatic GCP. In other words, the incidental take permit for the CEC licensing program is essentially the same plan that is described in the GCP, but on a smaller portion of land base and addressing only the Covered Activities over which CEC has jurisdiction. The CEC permit will address GCP Covered Activities for solar thermal or geothermal facilities that produce 50 megawatts or more of electricity; the permit will not address solar photo-voltaic (PV) technologies or wind energy generation.

Table 7.1.1-1 of the GCP lists the additional information required for incidental take permit applications under the GCP. CEC has provided this additional information as summarized below. Items marked * include references in the GCP to citations of the volume and chapter/section of the Draft DRECP and Draft EIR/EIS that provide background description and analysis. This summary of additional information includes the following attachments that provide the CEC program-specific data to support the application:

- Figure x, Map of CEC jurisdiction within DRECP DFAs
- Attachment A, Description of CEC Licensing Program
- Attachment B, CEC Estimated Impacts to Covered Species
- Attachment C, CEC Estimated Impacts to Critical Habitat

PROGRAM DESCRIPTION:

- Program title. California Energy Commission Renewable Energy Licensing (Certification) Program.
- Program location. CEC will extend its incidental take authorization to eligible renewable energy projects on non-Federal lands within Development Focus Areas (DFAs) in the DRECP Plan Area. These lands where CEC has project licensing authority do not have a specific spatial boundary. CEC assumes at this time, based on past geographical patterns of renewable energy development under its jurisdiction, that up to approximately 31%, or approximately 25,000 acres, of the total non-Federal acreage within DFAs will be licensed for solar thermal projects; and that up to 100%, or 10,250 acres, of the total non-Federal acreage within the DFAs could be licensed for geothermal projects. See attached map of the GCP Permit Area, within which CEC will consider licensing thermal renewable energy projects on non-Federal lands within DFAs (Figure II.3-8).
- Requested permit duration. From permit issuance through December 31, 2040.
- *Description of Covered Activities, including the size and type of proposed renewable energy facility (MW and technology type) or transmission development, with estimated acres of permanent ground disturbance. The CEC permit will authorize incidental take of Covered Species resulting from Covered Activities associated with the licensing of thermal renewable energy development, including construction, operation, and eventual closure of large solar thermal and geothermal power plants with a net generating capacity of 50 megawatts or larger. CEC Covered Activities also include electric transmission lines from a thermal power facility under CEC's jurisdiction to the first point of interconnection with the existing transmission system. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to descriptions of Covered Activities, including solar thermal and geothermal projects. Attachment A provides more information on CEC's licensing process for thermal renewable energy development. The spreadsheet at Attachment B-1 provides estimated ground disturbance acreages of modeled habitat for each Covered Species.
- *Description of all aspects of project siting, construction, operations and maintenance, and decommissioning, including pre-construction and clearance surveys for Covered Species. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to descriptions of Covered Activities, and for species surveys required under the CMAs.
- For state agency or local government programs that will extend incidental take authorization to third parties, a description of the program's purpose and how it is implemented, and the criteria the agency or local government will use to decide whether to extend take authorization to third parties. As a condition of project certification, CEC will require all licensees to implement the terms and conditions of CEC's incidental take permit on their project sites. See Attachment A for more information on CEC's licensing process for thermal renewable energy development.

PROGRAM BASELINE:

- *Proposed list of Covered Species. The 37 Covered Species listed in Table II.3-2 of Volume II.3.1.2.2 (DRECP Proposed Covered Species List) potentially would be incidentally taken in conjunction with CEC's Covered Activities.

- *Tables of baseline acres of modeled habitat for each Covered Species in the program area. See the USFWS GCP for appropriate references to the Affected Environment in the Draft DRECP and Draft EIR/EIS, which includes a baseline description of DRECP Covered Species in Volume III.7 and species profiles in Appendix Q (Baseline Biology Report). Also see the spreadsheet at Attachment B-1 for acreages of available modeled habitat for each Covered Species.
- Results of any site-specific presence/absence surveys required for Covered Species, including number, age, and sex of such species to the extent known. License applicants will conduct such surveys as required by the CMAs. See the USFWS GCP for appropriate references to the DRECP CMAs in the Draft DRECP and Draft EIR/EIS.

PROGRAM IMPACTS AND MITIGATION:

- *Tables showing the impact acres of modeled habitat for each Covered Species after avoidance and minimization CMAs have been applied (i.e., the amount of incidental take to be covered by the permit), for which the applicant will provide mitigation. The CEC renewable energy license program would impact up to approximately 35,250 acres within the DFAs. See the USFWS GCP for appropriate references to narrative descriptions of typical impacts of Covered Activities in the Draft DRECP and Draft EIR/EIS, including solar thermal and geothermal development. Also see the spreadsheet at Attachment B-1 for acreages of modeled habitat that will be impacted after implementation of avoidance and minimization CMAs. The spreadsheet provides impact acreages for each Covered Species for non-Federal DFA areas under CEC's jurisdiction (1) over the entire GCP Permit Area and (2) by ecoregional subarea or subunit.
- *Tables showing the acres of modeled habitat for each Covered Species that must be acquired and managed to mitigate the effects of incidental take, at the required compensation ratios. Approximately 35,600 acres will be needed to mitigate for the effects of incidental take, calculated at a 1.01 to 1 ratio. See the take analysis spreadsheet at Attachment B-1 and the discussion of incidental take in Section 9.1 of the GCP. The spreadsheet provides impact acreages for each Covered Species for non-Federal DFA areas under CEC's jurisdiction (1) over the entire GCP Plan Area and (2) by ecoregional subarea or subunit. CEC will impose the GCP mitigation fee in addition to CEC certification fees on projects for which licensees request third-party incidental take authorization. See Attachment A for discussion of CEC certification fees. Licensees may choose to provide mitigation lands directly, as discussed in Section 5.1 of the GCP. The DRECP Coordination Group, of which USFWS and CEC will be members, will be responsible for managing mitigation fees or land transfers received from CEC licensees, and for overseeing and prioritizing the acquisition of mitigation lands for the DRECP Conservation Area. Habitat acquisition and management activities undertaken by the DRECP Coordination Group will be consistent with CEC license requirements and Conditions of Certification for each individual project approved by the CEC. See Sections 5.1 and 7.1 of the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to descriptions of the DRECP Implementation Plan, Coordination Group, and compensation CMAs.
 - As shown in Attachment B-2, lands outside of the GCP Plan Area in the DRECP Plan-wide Reserve Design Envelope are needed for combined acquisition and non-acquisition measures to mitigate the effects of incidental take of Greater

Sandhill crane and mountain plover. Impacts to those Covered Species will be minimized and mitigated as described in Section 9.1 of the GCP.

- *An analysis of operational impacts likely to result in injury or mortality of Covered Species (birds and bats), and how those impacts will be minimized. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to a description and analysis of operational impacts to Covered Species, and to description of CMAs required to minimize operational impacts. Also see the spreadsheet at Attachment B-1 for estimated operational impacts (i.e., number of birds and bats injured or killed) that will result from CEC-licensed projects. Approximately 209 bird and bat Covered Species would be injured or killed through 2040.
- *A list of the CMAs required to be implemented for the affected Covered Species. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to avoidance, minimization, and compensation CMAs.
- *Description, including schedules and timeframes, for implementation of any non-acquisition mitigation measures for Covered Species. The DRECP Coordination Group will be responsible for managing mitigation fees received from CEC licensees, and overseeing and prioritizing the implementation of non-acquisition mitigation measures within the DRECP Conservation Area. See Sections 5.1 and 7.1 of the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to the DRECP Implementation Plan, Coordination Group, and cost analysis for non-acquisition mitigation measures. Also see the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to descriptions of non-acquisition mitigation measures, in particular Appendix H (CMAs Documentation) and Table H-8 (Eligible Compensation Actions for Impacts to DRECP Covered Species); and Volume II.3.1.7 (Preferred Alternative, Implementation Plan) for a discussion of implementation timeframes.

CRITICAL HABITAT ANALYSIS:

- *Tables showing the acres of designated critical habitat that occur within the jurisdiction of agency programs. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to descriptions of critical habitat for 5 Covered Species and 14 non-covered species. Also see the spreadsheet at Attachment C for critical habitat acreages likely to fall under CEC jurisdiction on non-Federal lands within the DFAs. The spreadsheet provides critical habitat acreages for each Covered Species for non-Federal DFA areas under CEC's jurisdiction (1) over the entire GCP Permit Area and (2) by ecoregional subarea or subunit.
- *Tables showing the acres of designated critical habitat that will be impacted within the jurisdiction of agency programs. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to discussion of critical habitat impacts, for both Covered Species and non-covered species. Also see the spreadsheet at Attachment C for critical habitat acreage impacts likely to occur on non-Federal lands under CEC jurisdiction within the DFAs. The spreadsheet provides critical habitat impact acreages for each Covered Species for non-Federal DFA areas under CEC's jurisdiction (1) over the entire GCP Permit Area and (2) by ecoregional subarea or subunit.
 - A minimal amount of desert tortoise critical habitat (about 66 acres) will be impacted by CEC Covered Activities within the DFAs.

- *Description, including schedules and timeframes, for implementation of measures required to offset any potential destruction or adverse modification of designated critical habitat within the jurisdiction of agency programs (e.g., a list of applicable CMAs the applicant will implement on project sites to avoid, minimize, or compensate for impacts to critical habitat). See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to avoidance, minimization, and compensation CMAs.
 - Very little critical habitat has been designated for desert tortoise on non-Federal lands in the DRECP Plan Area. However, limited transmission impacts to desert tortoise critical habitat may occur on non-Federal lands within CPAs that are acquired for permittee mitigation in the DRECP Conservation Area. We expect that any impacts to desert tortoise critical habitat within the CPAs will be minimal, and will be addressed through the implementation of non-acquisition mitigation measures, as described in Table H-8 (Eligible Compensation Actions for Impacts to DRECP Covered Species) of Appendix H (CMAs Documentation).

FUNDING ASSURANCES:

- *Detailed description of the costs of implementing the terms and conditions of the permit, and documentation of how the applicant will assure funding for those obligations over the life of the permit. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to the DRECP Implementation Plan, which includes an estimated cost analysis for mitigation land acquisition and non-acquisition mitigation measures. CEC will impose the GCP mitigation fee in addition to CEC certification fees to projects for which licensees request third-party incidental take authorization. See Attachment A for discussion of CEC certification fees and funding assurances. The DRECP Coordination Group will be responsible for managing mitigation fees received from CEC licensees, and overseeing and prioritizing the acquisition of mitigation lands, implementation of non-acquisition mitigation measures, and implementation of the DRECP Monitoring and Adaptive Management Program within the DRECP Conservation Area. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to the DRECP Implementation Plan, Coordination Group, Monitoring and Adaptive Management Program, and cost analysis.

CHANGED AND UNFORESEEN CIRCUMSTANCES:

- *Detailed description of how the permittee will respond to Changed Circumstances for renewable energy programs. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to the DRECP Monitoring and Adaptive Management Plan, which identifies reasonably foreseeable Changed Circumstances and includes a process for identifying and responding to them. See Section 7.4 of the USFWS GCP for a discussion of Unforeseen Circumstances. CEC will ensure that licensees monitor the occurrence of Changed Circumstances on their project sites through the project's CEC Compliance Monitoring and Closure Plan, and report to CEC on how they are responding to those changes. CEC will include licensee reports on Changed Circumstances in CEC's annual report to the USFWS. The DRECP Coordination Group will be responsible for managing permittee mitigation fees to cover monitoring and responding to Changed Circumstances within the DRECP Conservation Area.

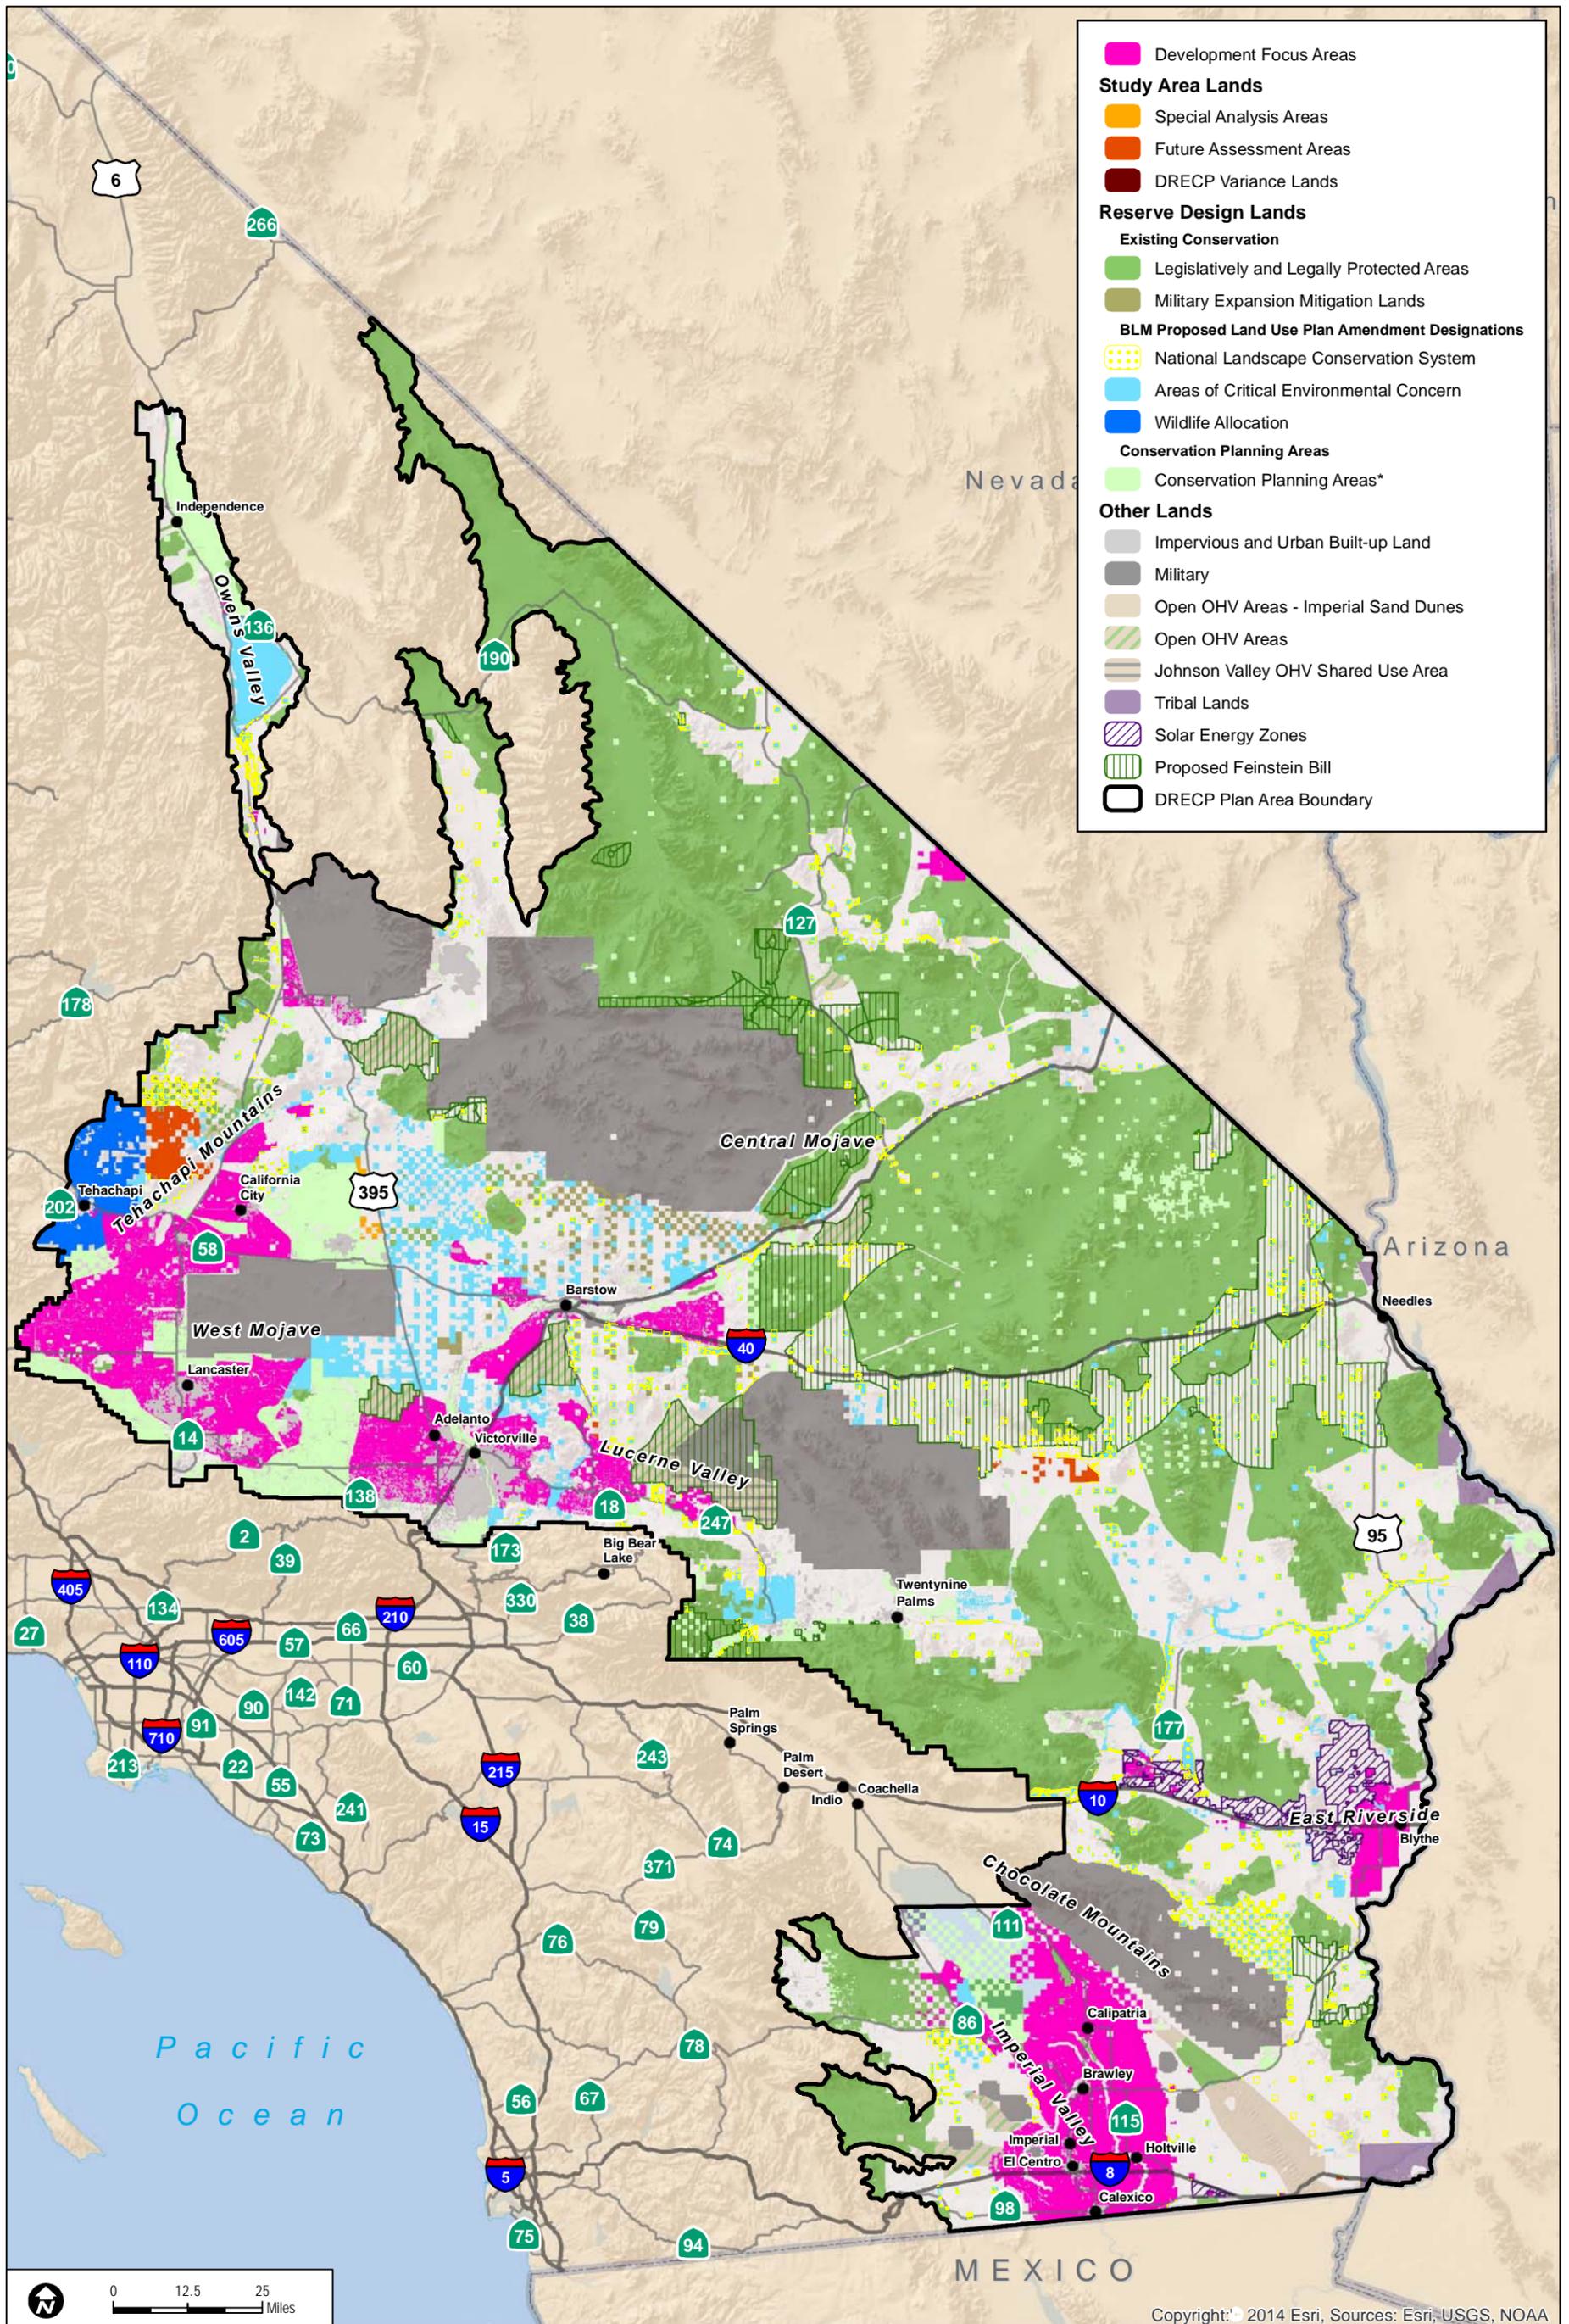

MONITORING AND REPORTING:

- *Description of how the applicant will assure monitoring compliance with the permit terms and conditions. State agency and local government permittees that grant third-party take authorization must describe how they will report to the USFWS on the activities of all third parties, to ensure permit take limits are not exceeded and the conservation commitments of the permit are met. CEC will ensure that licensees monitor and report the occurrence of incidental take of Covered Species on their project sites and the implementation of site-specific CMAs as part of the project's CEC Compliance Monitoring and Closure Plan. The DRECP Coordination Group will be responsible for monitoring Covered Species habitat within the DRECP Conservation Area. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to the DRECP Monitoring and Adaptive Management Plan, and to Section 7.3 of the GCP. See Attachment A for more information on CEC's licensing process for thermal renewable energy development, which includes a Compliance Monitoring and Closure Plan as part of CEC's final decision on the project. Failure of any CEC-licensed project to comply with any of the conditions of certification or the general compliance conditions may result in reopening of the case and required corrective actions, an administrative fine, revocation of CEC certification, or other actions as appropriate. In issuing project licenses and monitoring project compliance, CEC will manage its incidental take permit so that the permit-specified take limits are not exceeded. If construction or operation of a project were to exceed species incidental take limits established in the USFWS permit, the CEC would implement the actions above, related to non-compliance, on a project specific basis, and require the immediate cessation of Covered Activities for which the take limits were exceeded. In this case, the CEC would also consult with the USFWS and the other DRECP implementing entities to develop additional measures to reduce take, and to discuss the potential re-allocation of take in accordance with the take allocation framework outlined in the DRECP Implementation Plan. Failure to reduce take to within the permit-specified take limits could also trigger a request from CEC to amend the incidental take permit to increase the take limits and provide additional mitigation.

OTHER MEASURES:

- *A Bird and Bat Conservation Strategy (BBCS) outlining how the project or program will address impacts to non-covered species that are protected under the Migratory Bird Treaty Act (MBTA). CEC will require license applicants to develop and implement a BBCS for site-specific projects that are likely to impact MBTA-protected birds. CEC is required by law to ensure that projects certified under its jurisdiction are in compliance with all applicable Federal, State, and local laws, ordinances, regulations, and standards, including the Federal Endangered Species Act, Migratory Bird Treaty Act, and Bald and Golden Eagle Protection Act. See Section 7.6.3 of the GCP for a description of the BBCS requirement for non-covered species. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to discussions of habitat and operational impacts to migratory birds.
- A cultural resources survey report detailing all available information to determine whether historic properties are present in the project or program area, including results of any field surveys, needed for USFWS compliance with Section 106 of the National Historic Preservation Act (NHPA). CEC will require license applicants to provide a

cultural resources survey and a proposed mitigation plan for site-specific projects that are likely to impact cultural resources. CEC is required by law to ensure that projects certified under its jurisdiction are in compliance with all applicable Federal, State, and local laws, ordinances, regulations, and standards, including the National Historic Preservation Act.

Preferred Alternative - General Conservation Plan

11.1 California Energy Commission Application Materials – Attachment A

California Energy Commission Application for Incidental Take Permit under Section 10 of the Endangered Species Act

INTRODUCTION

The California Energy Commission (CEC) has submitted to the U.S. Fish and Wildlife Service (USFWS) an application for an incidental take permit under the Federal Endangered Species Act based on the USFWS General Conservation Plan (GCP), a component of the interagency Desert Renewable Energy Conservation Plan (DRECP). The permit will authorize incidental take of Covered Species resulting from Covered Activities that are under CEC's jurisdiction on non-Federal lands within Development Focus Areas (DFAs) in the DRECP Plan Area. CEC has exclusive State jurisdiction over solar thermal and geothermal power plants that have the capacity to generate 50 megawatts or more. CEC intends the permit application to be fully consistent with the terms and conditions of the GCP. CEC's licensing (certification) process will ensure that licensees' Covered Activities comply with GCP terms and conditions, including, for example, a requirement that applicable DRECP CMAs be included as conditions for certification of site-specific Covered Activities. Project proponents may obtain coverage under CEC's Federal incidental take authorization by complying with all GCP requirements. In particular, CEC will (1) require licensees to implement the terms and conditions of the CEC permit, (2) monitor licensee compliance with the permit terms and conditions, and (3) take action to enforce compliance with the permit terms and conditions if necessary.

DESCRIPTION OF CEC RENEWABLE ENERGY LICENSING PROCESS

The implementation of the GCP component of the DRECP would streamline approval of renewable thermal energy projects under CEC jurisdiction. Individual projects would still need to go through the CEC thermal power plant licensing process, but would benefit from the information, analyses, Conservation and Management Actions (CMAs), and conservation strategies developed within the Draft DRECP and Draft EIR/EIS to inform and accelerate the biological portion of CEC's licensing process. CEC's ability to extend Federal incidental take authority for Covered Species, including federally listed species, to projects under CEC jurisdiction will also help to further expedite project approvals. Implementation of the DRECP contemplates a review of individual projects that request renewable energy licenses from CEC for DRECP consistency by the DRECP Coordination Group. It is anticipated that at the successful completion of this integrated project proposal review, the project proponent would formally apply to the CEC for a thermal power plant license, and begin the CEC licensing process.

CEC's power plant licensing process includes an extensive review of environmental issues, including the proposed facility's effect on electric system reliability. CEC's governing laws contemplate a year-long process from the time an Application for Certification (AFC) is accepted as complete to the time a final decision is made regarding certain types of plants, including solar thermal and geothermal facilities (Calif. Public Resources Code section 25540.6, subdivs. (a)(1) and (a)(3)); in practice, the time required for CEC review and decision is often

longer. CEC staff prepare a report and provide testimony at CEC hearings regarding the proposed plant's environmental effects, and the Commission typically imposes a number of conditions of certification as part of any project approval to ensure environmental impacts are mitigated and other issues are addressed. The CEC's power plant licensing process is in lieu of any state or local permit, certificate, or similar document that would otherwise be required for construction of the plant (Calif. Public Resources Code section 25500). The process is also a certified regulatory program under the California Environmental Quality Act (Public Resources Code section 21000 et seq.; CEQA). This means the CEC's siting process satisfies CEQA requirements for preparation of an environmental impact report or equivalent document (see California Code of Regulations, Title 14, section 15251, subdiv. (j)).

CEC has jurisdiction over thermal electric power plants with a net generating capacity of 50 megawatts or larger. CEC also has jurisdiction over electric transmission lines from a thermal power plant under CEC's jurisdiction, to the first point of interconnection with the existing transmission system; and over facilities related to a thermal power plant, including fuel supply lines, access roads, and water and waste facilities.

Developers of most electric power plants and/or electric transmission lines that fall within CEC's jurisdiction must prepare an AFC that includes the following information required by the Energy Commission's Siting Regulations:

- Project description
- Site description
- Engineering description of proposed facilities
- Electric transmission lines and any other linear facilities related to the project
- Project, site, and linear alternatives
- Environmental description and expected impacts including biological surveys conducted at the appropriate time of year
- Mitigation measures to reduce potentially significant environmental impacts
- Information necessary for the local/regional air pollution control district to make a determination of compliance with local rules and regulations
- Information necessary for the regional water quality control board to issue waste discharge requirements or a national pollution discharge elimination system permit
- Compliance with applicable laws, ordinances, regulations, and standards
- Financial impacts and estimated cost of the project
- Project schedule

Through the AFC process, CEC staff determine whether a project complies with applicable laws, mitigates potentially significant adverse impacts, and impacts electrical system reliability and efficiency. After this review, staff then make recommendations to the Commission. It also establishes the conditions of certification required for the project to be constructed, operated, and decommissioned. CEC has a Certified Regulatory Program and is the lead agency under CEQA; however, CEC does not prepare Environmental Impact Reports but prepares functionally equivalent documents including Staff Assessments and Committee reports. The AFC process entails a series of information-gathering and analytical phases leading to the final decision to approve/certify or deny a proposed project.

Public involvement is a critical part of CEC's licensing process. When an application has been accepted by the Commission, a Commission Committee is assigned to preside over the licensing process and then make a recommendation to the full Commission for consideration at a public hearing. All Committee and Commission hearings and decisions on a licensing case are publicly noticed and conducted during open, public meetings. During the licensing process, the Energy Commission staff acts as an independent party in each case and has the responsibility to perform an independent assessment of each energy facility application filed with the Commission. The staff conducts a technical assessment of each proposed facility, covering many environmental and engineering areas. The staff also shares the results of its analysis with all interested parties in open, publicly noticed workshops. The staff works to ensure that any application for a proposed energy facility is reviewed thoroughly, consistently, and as expeditiously as possible.

The license applicant must contact the local or regional air pollution control district and the appropriate regional water quality control board. The applicant should also contact the appropriate city or county planning/community development department to understand the local applicable laws, ordinances, regulations, standards, plans, and policies that need to be addressed in the AFC. City or county government staff also can give the applicant a general sense of likely community response to the project. These local government contacts should be made before the AFC is filed, preferably in coordination with the CEC staff's pre-filing meeting.

The CEC staff's independent analysis is presented in technical staff reports known as Staff Assessments. These assessments are prepared pursuant to sections 1742, 1742.5, 1743, and 1744 of Title 20, California Code of Regulations. These assessments are staff documents; they are not Commission documents nor are they draft decisions or proposed decisions. These assessments describe the following:

- Existing environment
- Proposed project
- Whether the facilities can be constructed and operated safely and reliably in accordance with applicable laws, ordinances, regulations and standards
- Environmental consequences of the project, including potential public health and safety impacts
- Mitigation measures proposed by the applicant, staff, and interested agencies and intervenors which may lessen or eliminate potential impacts
- Proposed conditions under which the project should be constructed and operated if it is certified
- Project alternatives

MONITORING AND COMPLIANCE OF LICENSED PROJECTS

After CEC has certified a project, the licensee can begin construction, and CEC monitors the project for compliance with the conditions of certification. The developer is responsible for complying with CEC's adopted conditions of certification, and working with CEC compliance staff for the lifetime of the project. During the AFC process, CEC establishes a monitoring system to assure that the facility is built and operated in compliance with environmental, public health and safety, and other conditions adopted by CEC. Compliance monitoring is conducted by CEC approved third parties (for biological conditions – appropriately qualified biologists), at the

expense of the project developer. The results of required monitoring efforts are independently reviewed and verified by CEC compliance staff and biologists, including field visits and site inspections. Through monitoring, CEC enforces the conditions of certification from the start of construction through the unexpected closure or planned decommissioning of a facility at the end of its useful life.

The CEC project license General Conditions are binding on project licensees, and include a Compliance Monitoring and Closure Plan (Compliance Plan), are established as required by Public Resources Code section 25532. The Compliance Plan provides a means for assuring that the facility is constructed, operated, and closed in conjunction with air and water quality, public health and safety, environmental, and other applicable regulations, guidelines, and conditions adopted or established by CEC and specified in the written decision on the AFC or otherwise required by law. The Compliance Plan is included as part of the final decision on the project, and contains the following General Conditions that:

- Set forth the duties and responsibilities of the Compliance Project Manager, the project owner, delegate agencies, and others
- Set forth the requirements for handling confidential records and maintaining the compliance record
- State procedures for settling disputes and making post-certification changes
- State the requirements for periodic compliance reports and other administrative procedures that are necessary to verify the compliance status for all Energy Commission approved conditions
- Establish requirements for facility closure plans

The licensee is responsible for ensuring that the general compliance conditions and the conditions of certification are satisfied. The general compliance conditions regarding post-certification changes specify measures that the project owner must take when requesting changes in the project design, compliance conditions, or ownership. Failure to comply with any of the conditions of certification or the general compliance conditions may result in reopening of the case and revocation of CEC certification, an administrative fine, or other action as appropriate.

CEC FUNDING ASSURANCES

CEC will assure adequate funding to administer implementation of its incidental take permit by (1) providing for staff to review license applications and monitor certified projects through 2040; and (2) requiring license applicants to pay the appropriate incidental take mitigation fee, or as specified in the Draft DRECP and Draft EIR/EIS, requiring applicants to provide habitat mitigation lands by purchasing them directly and conveying them to appropriate land management entity as specified in individual project Conditions of Certification.

CEC collects an application fee based on the generating capacity of the proposed project; that fee presently tops out at more than \$800,000 for facilities over 1,000 megawatts, and is adjusted to keep pace with inflation. If a power plant is approved, a project operator must also pay CEC an annual compliance fee of \$26,872 (also adjusted annually) to cover the expense of monitoring compliance with project conditions. These fees are assessed on all thermal power plant projects, and have been established to cover the cost of CEC staff to process license applications,

complete required environmental analyses, and to administer ongoing compliance programs for each project. CEC has an established history and track record of implementing and adjusting these fees as necessary to ensure both a successful licensing program and an ongoing certification program at each licensed facility.

Under this licensing program, the CEC has statutory authority to impose required environmental mitigation measures, including biological mitigation measures. Such measures typically and routinely include requirements to offset species and habitat impacts through avoidance, minimization, and long-term habitat acquisition and management. CEC has the authority to and routinely requires applicants to acquire and convey habitat lands to appropriate third-party managers at their own expense. Performance for these measures is typically secured in advance with a letter of credit or surety bond provided to the CEC by the licensee at project approval. Typically the purchase and conveyance of habitat lands is required within 12-18 months of project approval. CEC also has the authority to require licensees to provide the required GCP biological impact mitigation fees for the required land acquisition and management, and for implementation of any non-acquisition mitigation measures. USFWS and CEC will be participating members of the DRECP Coordination Group, to ensure CEC Conditions of Certification are implemented in compliance with the incidental take permit.

11.2 California State Lands Commission Application Materials

Application for Incidental Take Permit under Section 10 of the Endangered Species Act Summary of Supplementary Information

The U.S. Fish and Wildlife Service (USFWS) General Conservation Plan (GCP) provides the non-Federal incidental take permitting process for the Desert Renewable Energy Conservation Plan (DRECP), and is contained in Appendix M of the Draft DRECP and Draft Environmental Impact Report/Environmental Impact Statement (EIR/EIS). The California State Lands Commission (CSLC) has submitted an application to USFWS for a permit under the GCP that authorizes incidental take of Covered Species resulting from renewable energy development occurring on CSLC leased lands. CSLC intends the permit application to be fully consistent with the terms and conditions of the GCP. The CSLC application incorporates by reference the USFWS GCP (Appendix M) and the Draft DRECP and Draft EIR/EIS.

The GCP incorporates the DRECP's Covered Species, most of the DRECP's Covered Activities for renewable energy development, Biological Conservation and Management Actions (CMAs), and comprehensive conservation strategy (biological goals and objectives and DRECP Plan-wide Reserve Design Envelope). CSLC's requested permit under the GCP also will incorporate these DRECP elements. Upon permit issuance, CSLC will extend its "master" take authorization to lease applicants for renewable energy projects on State lands under its jurisdiction. As a condition of lease approval, CSLC will require all lessees to implement the terms and conditions of CSLC's incidental take permit on their project sites. In particular, CSLC will (1) monitor lessee compliance with the permit terms and conditions, and (2) take action to enforce lessee compliance with the permit terms and conditions if necessary.

The CSLC "master" permit under the GCP will provide a programmatic process for CSLC to extend its incidental take authorization to qualified third parties under its direct control, and is functionally a subset of the programmatic GCP. In other words, the incidental take permit for the CSLC renewable energy lease program is essentially the same plan that is described in the GCP, but on a smaller land base (i.e., all CSLC lands within the Development Focus Areas (DFAs) in the GCP Permit Area) and addressing only the Covered Activities over which CSLC has jurisdiction. The CSLC permit will address all GCP Covered Activities except solar thermal or geothermal facilities that produce 50 megawatts or more of electricity. For leases involving these Covered Activities, any incidental take of Covered Species that occurs on CSLC lands will be authorized under the California Energy Commission's (CEC) Federal incidental take permit, when that is issued; CEC has exclusive State jurisdiction over the licensing of thermal renewable energy facilities that produce 50 megawatts or more. The CSLC permit will cover only solar thermal and geothermal facilities that produce less than 50 megawatts. Please note that Attachment B addresses ground disturbance impacts resulting from all renewable energy Covered Activities combined on all CSLC lands within the DFAs.

Table 7.1.1-1 of the GCP lists the additional information required for incidental take permit applications under the GCP. CSLC has provided this additional information as summarized below. Items marked * include references in the GCP to citations of the volume and chapter/section of the Draft DRECP and Draft EIR/EIS that provide background description and

analysis. This summary of additional information includes the following attachments that provide the CSLC program-specific data supporting the application:

- Figure x, Map of CSLC Lands within DRECP DFAs
- Attachment A, Description of CSLC Lease Program
- Attachment B, CSLC Estimated Impacts to Covered Species
- Attachment C, CSLC Estimated Impacts to Critical Habitat

PROGRAM DESCRIPTION:

- Program title. California State Lands Commission Renewable Energy Program.
- Program location. CSLC will extend its incidental take authorization to eligible renewable energy projects on all CSLC lands in DFAs within the DRECP Plan Area. CSLC assumes that 100% of its lands within the DFAs are open for renewable energy development leases, or approximately 20,797 acres. See attached map (Figure x).
- Requested permit duration. Through 2040.
- *Description of Covered Activities, including the size and type of proposed renewable energy facility (MW and technology type) or transmission development, with estimated acres of permanent ground disturbance. The CSLC permit will authorize incidental take of Covered Species resulting from leasing State lands for the implementation of Covered Activities associated with renewable energy development under its jurisdiction, including construction, operation, and eventual closure. CSLC Covered Activities also include electric transmission lines on CSLC lands within the DRECP Plan Area. See the USFWS GCP for appropriate references to descriptions of Covered Activities in the Draft DRECP and Draft EIR/EIS. See Attachment A for more information on CSLC's lease program for renewable energy projects. Also see the spreadsheet at Attachment B-1 for estimated ground disturbance acreages of modeled habitat for each Covered Species that will occur over all CSLC lands within the DFAs.
- *Description of all aspects of project siting, construction, operations and maintenance, and decommissioning, including pre-construction and clearance surveys for Covered Species. See the USFWS GCP for appropriate references to descriptions of Covered Activities in the Draft DRECP and Draft EIR/EIS, and for species surveys required under the CMAs.
- For state agency or local government programs that will extend incidental take authorization to third parties, a description of the program's purpose and how it is implemented, and the criteria the agency or local government will use to decide whether to extend take authorization to third parties. As a condition of lease approval, CSLC will require all lessees to implement the terms and conditions of CSLC's incidental take permit on their project sites. See Attachment A for more information on CSLC's lease approval process.

PROGRAM BASELINE:

- *Proposed list of Covered Species. The 37 Covered Species listed in Table II.3-2 of Volume II.3.1.2.2 (DRECP Proposed Covered Species List) potentially would be incidentally taken in conjunction with CSLC's Covered Activities.
- *Tables of baseline acres of modeled habitat for each Covered Species in the program area. See the USFWS GCP for appropriate references to the Affected Environment in the

Draft DRECP and Draft EIR/EIS, which includes a baseline description of DRECP Covered Species in Volume III.7 and species profiles in Appendix Q (Baseline Biology Report). Also see the spreadsheet at Attachment B-1 for acreages of available modeled habitat for each Covered Species.

- Results of any site-specific presence/absence surveys required for Covered Species, including number, age, and sex of such species to the extent known. Lease applicants will conduct such surveys as required by the CMAs. See the USFWS GCP for appropriate references to the DRECP CMAs in the Draft DRECP and Draft EIR/EIS.

PROGRAM IMPACTS AND MITIGATION:

- *Tables showing the impact acres of modeled habitat for each Covered Species after avoidance and minimization CMAs have been applied (i.e., the amount of incidental take to be covered by the permit), for which the applicant will provide mitigation. The CSLC lease program will impact approximately 20,400 acres (calculated as the combined, overlapping modeled habitats for all Covered Species). See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to narrative descriptions of typical impacts of Covered Activities. Also see the spreadsheet at Attachment B-1 for acreages of modeled habitat that will be impacted after implementation of avoidance and minimization CMAs. The spreadsheet provides impact acreages for each Covered Species for all CSLC lands within the DFAs (1) over the entire GCP Permit Area and (2) for each ecoregional subarea or subunit.
- *Tables showing the acres of modeled habitat for each Covered Species that must be acquired to mitigate the effects of incidental take, at the required compensation ratios. Overall, the CSLC lease program will require approximately 20,600 acres of mitigation lands (calculated at an average compensation ratio of 1.01:1). See the take analysis spreadsheet at Attachment B-1 and the discussion of incidental take in Section 9.1 of the GCP. The spreadsheet provides impact acreages for each Covered Species for all CSLC lands within the DFAs (1) over the entire GCP Permit Area and (2) for each ecoregional subarea or subunit. CSLC will impose the GCP mitigation fee (also known as the DRECP implementation fee) in addition to CSLC lease application fees for renewable energy projects needing third-party incidental take authorization. See Attachment A for discussion of CSLC lease application fees. Lessees may choose to provide appropriate mitigation lands directly, as discussed in Section 5.1 of the GCP, and CSLC may choose to provide its own lands as mitigation. The DRECP Coordination Group will be responsible for managing mitigation fees or land transfers received from CSLC or its lessees, and for overseeing and prioritizing the acquisition of mitigation lands for the DRECP Conservation Area. See Sections 5.1 and 7.1 of the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to descriptions of the DRECP Implementation Plan, Coordination Group, and compensation CMAs. As shown in Attachment B-2, there are sufficient lands available within the DRECP Plan-wide Reserve Design Envelope for acquisition and non-acquisition measures combined to mitigate the effects of incidental take of all Covered Species under the CSLC permit.
- *An analysis of operational impacts likely to result in injury or mortality of Covered Species (birds and bats), and how those impacts will be minimized and mitigated. Approximately 123 birds and bats are expected to be injured or killed at renewable energy projects on CSLC-leased lands. See the USFWS GCP for appropriate references

in the Draft DRECP and Draft EIR/EIS to a description and analysis of operational impacts to Covered Species, and to description of CMAs required to avoid, minimize, and compensate for operational impacts. Also see the spreadsheet at Attachment B-1 for estimated operational impacts (i.e., number of birds and bats injured or killed) that will result from renewable energy projects on CSLC lands.

- *A list of the CMAs required to be implemented for the affected Covered Species. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to avoidance, minimization, and compensation CMAs.
- *Description, including schedules and timeframes, for implementation of any non-acquisition mitigation measures for Covered Species. The DRECP Coordination Group will be responsible for managing mitigation fees received from CSLC lessees, and overseeing and prioritizing the implementation of non-acquisition mitigation measures within the DRECP Conservation Area. See Sections 5.1 and 7.1 of the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to the DRECP Implementation Plan, Coordination Group, and cost analysis for non-acquisition mitigation measures. Also see the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to descriptions of non-acquisition mitigation measures, in particular Appendix H (CMAs Documentation) and Table H-8 (Eligible Compensation Actions for Impacts to DRECP Covered Species); and Volume II.3.1.7 (Preferred Alternative, Implementation Plan) for a discussion of implementation timeframes.

CRITICAL HABITAT ANALYSIS:

- *Tables showing the acres of designated or proposed critical habitat that occur within the jurisdiction of agency programs. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to descriptions of critical habitat for 5 Covered Species and 14 non-covered species. Also see the spreadsheet at Attachment C for critical habitat acreages under CSLC jurisdiction within the DFAs. The spreadsheet provides critical habitat acreages for each Covered Species for all CSLC lands within the DFAs (1) over the entire GCP Permit Area and (2) for each ecoregional subarea or subunit.
- *Tables showing the acres of designated or proposed critical habitat that will be impacted within the jurisdiction of agency programs. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to discussion of critical habitat impacts, for both Covered Species and non-covered species. Also see the spreadsheet at Attachment C for critical habitat acreage impacts likely to occur on CSLC lands within the DFAs. The spreadsheet provides critical habitat impact acreages for each Covered Species for all CSLC lands within the DFAs (1) over the entire GCP Permit Area and (2) for each ecoregional subarea or subunit.
 - No critical habitat will be impacted by CSLC Covered Activities within the DFAs.
- *Description, including schedules and timeframes, for implementation of measures required to offset any potential destruction or adverse modification of designated or proposed critical habitat within the jurisdiction of agency programs (e.g., a list of applicable CMAs the applicant will implement on project sites to avoid, minimize, or compensate for impacts to critical habitat). Very little critical habitat has been designated for desert tortoise on non-Federal lands in the DRECP Plan Area. However, limited transmission impacts to desert tortoise critical habitat may occur on non-Federal lands

within CPAs as they are acquired for permittee mitigation in the DRECP Conservation Area. If any such impacts occur on CSLC lands within the CPAs, we expect them to be minimal, and they will be addressed through the implementation of non-acquisition mitigation measures.

FUNDING ASSURANCES:

- *Detailed description of the costs of implementing the terms and conditions of the permit, and documentation of how the applicant will assure funding for those obligations over the life of the permit. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to the DRECP Implementation Plan, which includes an estimated cost analysis for mitigation land acquisition and non-acquisition mitigation measures. CSLC will impose the GCP mitigation fee in addition to CSLC lease application fees for projects needing third-party incidental take authorization. See Attachment A for discussion of CSLC lease application fees and funding assurances. The DRECP Coordination Group will be responsible for managing mitigation fees received from CSLC licensees, and overseeing and prioritizing the acquisition of mitigation lands, implementation of non-acquisition mitigation measures, and implementation of the DRECP Monitoring and Adaptive Management Program within the DRECP Conservation Area. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to the DRECP Implementation Plan, Coordination Group, Monitoring and Adaptive Management Program, and cost analysis.

CHANGED AND UNFORESEEN CIRCUMSTANCES:

- *Detailed description of how the permittee will respond to Changed Circumstances for renewable energy programs. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to the DRECP Monitoring and Adaptive Management Plan, which identifies reasonably foreseeable Changed Circumstances and includes a process for identifying and responding to them. See Section 7.4 of the USFWS GCP for a discussion of Unforeseen Circumstances. As a condition of the lease, CSLC will ensure that lessees monitor the occurrence of Changed Circumstances on their project sites and report to CSLC on how they are responding to those changes. CSLC will include lessee reports on Changed Circumstances in CSLC's annual report to the USFWS. The DRECP Coordination Group will be responsible for managing lessee mitigation fees to cover monitoring and responding to Changed Circumstances through adaptive management within the DRECP Conservation Area.

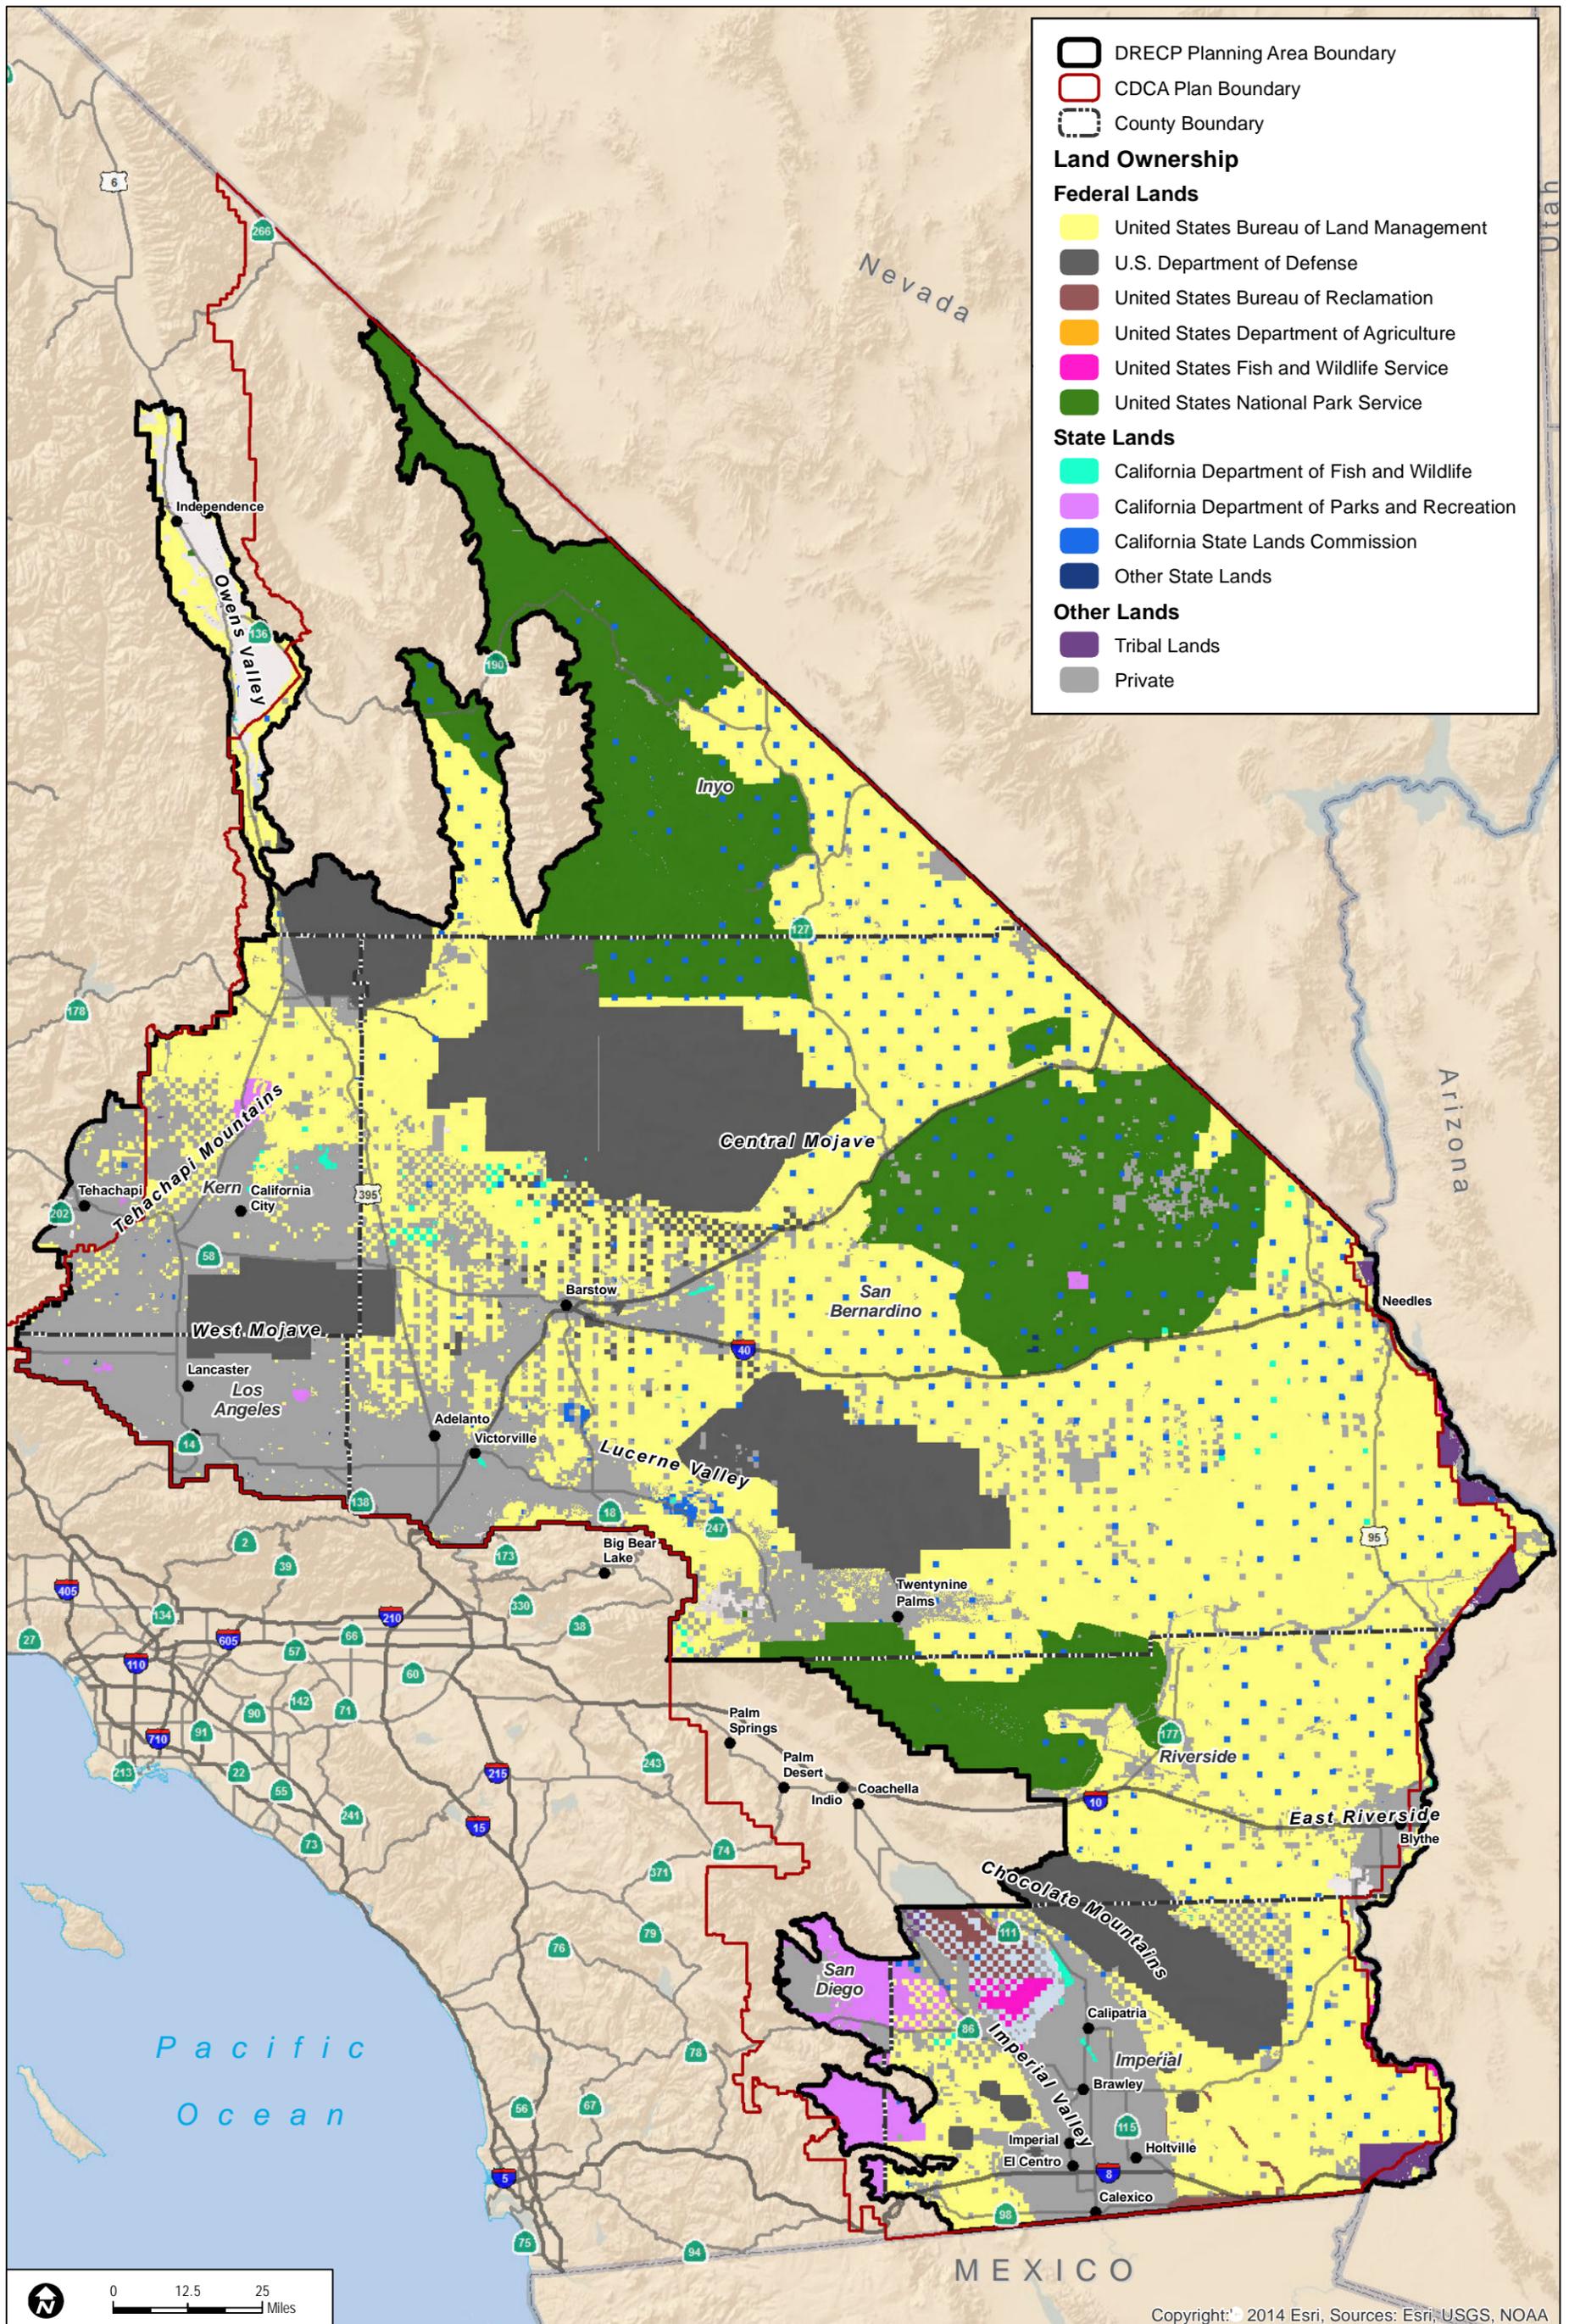

MONITORING AND REPORTING:

- *Description of how the applicant will assure monitoring compliance with the permit terms and conditions. State agency and local government permittees that grant third-party take authorization must describe how they will report to the USFWS on the activities of all third parties, to ensure permit take limits are not exceeded and the conservation commitments of the permit are met. As conditions of the lease, CSLC will ensure that lessees monitor and report on the implementation of site-specific CMAs and the occurrence of incidental take of Covered Species on their project sites. The DRECP Coordination Group will be responsible for monitoring Covered Species habitat within the DRECP Conservation Area. See the USFWS GCP for appropriate references in the Draft DRECP

and Draft EIR/EIS to the DRECP Monitoring and Adaptive Management Plan, and to Section 7.3 of the GCP. See Attachment A for more information on CSLC's lease approval process, which requires CSLC to monitor lease terms and conditions.

OTHER MEASURES:

- *A Bird and Bat Conservation Strategy (BBCS) outlining how the project or program will minimize impacts to non-covered species that are protected under the Migratory Bird Treaty Act (MBTA). CSLC will require lease applicants to develop and implement a BBCS for site-specific projects that are likely to impact MBTA-protected birds. CSLC must ensure that projects for which it leases State lands are in compliance with all applicable Federal, State, and local laws, including the Federal Endangered Species Act, Migratory Bird Treaty Act, and Bald and Golden Eagle Protection Act. See Section 7.6.3 of the GCP for a description of the BBCS requirement for non-covered species. See the USFWS GCP for appropriate references in the Draft DRECP and Draft EIR/EIS to discussions of habitat and operational impacts to migratory birds.
- A cultural resources survey report detailing all available information to determine whether historic properties are present in the project or program area, including results of any field surveys, needed for USFWS compliance with Section 106 of the National Historic Preservation Act (NHPA). CSLC will require lease applicants to provide a cultural resources survey and a proposed mitigation plan for site-specific projects that are likely to impact cultural resources. CSLC must ensure that projects for which it leases State lands are in compliance with all applicable Federal, State, and local laws, including the National Historic Preservation Act.

11.2 California State Lands Commission Application Materials – Attachment A

California State Lands Commission

Application for Incidental Take Permit under Section 10 of the Endangered Species Act

INTRODUCTION

The California State Lands Commission (CSLC or Commission) has submitted to the U.S. Fish and Wildlife Service (USFWS) an application for an incidental take permit under the Federal Endangered Species Act based on the USFWS General Conservation Plan (GCP), a component of the interagency Desert Renewable Energy Conservation Plan (DRECP). The permit will authorize incidental take of Covered Species resulting from Covered Activities that are under CSLC's jurisdiction within Development Focus Areas (DFAs) in the DRECP Plan Area. CSLC has State jurisdiction and management control over certain public lands that were received by the State from the United States (i.e., sovereign and school lands). CSLC intends the permit application to be fully consistent with the terms and conditions of the GCP. CSLC's lease application process will ensure that Covered Activities on leased lands comply with GCP terms and conditions, including, for example, a requirement that applicable DRECP Conservation and Management Actions (CMAs) be included as conditions on a lease of State lands for renewable energy development. Project proponents requesting a CSLC lease may obtain coverage under CSLC's Federal incidental take authorization by complying with all GCP requirements. In particular, CSLC will (1) require lease holders to implement the terms and conditions of the CSLC permit, (2) monitor lessee compliance with the permit terms and conditions, and (3) take action to enforce compliance with the permit terms and conditions if necessary.

The CSLC was established in 1938 with authority detailed in Division 6 of the California Public Resources Code. The CSLC serves the people of California by providing stewardship of the lands, waterways, and resources entrusted to its care through economic development, protection, preservation, and restoration. CSLC organization goals include the following:

- Protect, restore, enhance, and preserve resources on State lands
- Manage State lands to generate revenues, enhance the economy, and assure ongoing viability of the resource while protecting the environment
- Expand public use and access to and along the State's inland and coastal waters

The CSLC Renewable Energy Program is an interdivisional, interdisciplinary team for renewable energy related programs, initiatives, and projects affecting the Commission's jurisdiction on both sovereign and school lands. Currently, the program's three main areas of focus are marine renewable energy, desert renewable energy, and geothermal energy. Program staff work on site-specific applications for renewable energy projects, and participate in stakeholder and interagency working groups that recommend and/or develop policy to promote the scientifically based advancement of renewable energy. With the passage of Assembly Bill 32 (the California Global Warming Solutions Act of 2006), and the increased public awareness about climate change, CSLC staff expect more interest in the long-term leasing of school lands for renewable energy projects.

DESCRIPTION OF CSLC RENEWABLE ENERGY PROGRAM

In 1853, the U.S. Congress granted to the state of California approximately 5.5 million acres of land, generally the 16th and 36th sections of every township and range in the state, for the specific purpose of supporting public schools. These lands are commonly referred to as “school lands.” Over the years, most of those lands were sold. In 1984, the state Legislature passed the School Land Bank Act (PRC 8700 *et seq.*), which established the School Land Bank Fund and appointed CSLC as its trustee. The School Land Bank Act directed the CSLC to develop school lands into a permanent and productive resource base for revenue-generating purposes. CSLC is required to deposit revenue from school lands into the State treasury for the benefit of the State Teachers’ Retirement Fund. Today, CSLC manages approximately 468,600 acres of school lands held in fee ownership by the State of California and the reserved mineral interests on approximately 790,000 acres of additional lands state-wide where the surface estates have been sold. Approximately 340,533 acres of fee-owned school lands are within the DRECP Plan Area, including approximately 20,797 acres within renewable energy Development Focus Areas (DFAs).

CSLC also has jurisdiction and management authority over the beds and banks of navigable lakes and waterways. These sovereign lands are subject to the protections of the Common Law Public Trust. Sovereign lands under CSLC’s jurisdiction in the DRECP Plan Area include the Colorado River and Owens Lake. Although CSLC is generally prohibited from alienating sovereign lands, CSLC negotiates leases of these lands where appropriate and beneficial to the people of the State of California, and where CSLC determines that activities are not inconsistent with the Public Trust. Nothing in the Draft DRECP and Draft EIR/EIS, including the GCP, should be construed to infringe on CSLC’s jurisdiction over the State of California sovereign lands.

The exploration and extraction of geothermal resources are under CSLC’s jurisdiction. The geothermal program involves negotiation of lease terms, verification of production and royalty, review of exploration and development plans, review of individual well-drilling programs, and on-site inspection of daily lease operations. However, geothermal facilities that generate 50 megawatts or more of electricity must be licensed by the California Energy Commission (CEC). Authorization for incidental take of covered species will be covered under CEC’s Federal incidental take permit, when it is issued, for these projects, even if a CSLC surface-use lease and/or a geothermal resources lease are still required for the project.

DESCRIPTION OF LEASE APPLICATION PROCESS

CSLC negotiates leases for development of school lands consistent with the statutory directives discussed above and consistent with any additional policy directives deemed appropriate by the Commissioners. Specifically, CSLC is committed to the environmentally responsible use of school lands for renewable energy projects (see the *Resolution by the California State Lands Commission Supporting the Environmentally Responsible Development of School Lands under the Commission’s Jurisdiction for Renewable Energy Related Projects* adopted by CSLC on October 16, 2008). As a result, CSLC’s emphasis in administering school lands has been (1) maximization of revenues from school lands’ assets, (2) protection of the corpus of the trust,

and (3) protection of the environment and compliance with the California Environmental Quality Act (CEQA). The Commission is assisted by a staff of more than 200 specialists in mineral resources, land management, boundary determination, and the natural sciences.

Upon receipt of an inquiry about the proposed use of State lands, the CSLC Title Unit reviews its files and information submitted to determine the extent of the State's property interest in the project site. If staff determines that the proposed project is within CSLC's jurisdiction, an application for use of the land must be submitted. No project can proceed until the Commission has considered and taken action on the application.

CSLC's Division of Environmental Planning and Management provides analytical staff services (policy and technical) to the members of the Commission, its Executive Officer, and other CSLC programs, and ensures CSLC compliance with the provisions of the CEQA. The Division also develops, coordinates, and implements CSLC environmental programs, including renewable energy. Certain other additional functions of the Division are to conduct or oversee mitigation monitoring activities to ensure that measures adopted by the Commission to mitigate potential environmental impacts of an approved project are implemented and effective; represent the Commission on task forces and in special project groups affecting the agency, respond to information or program requests of the Commission or other public agencies, and provide GIS support.

CSLC staff recommends applicants begin the leasing process by requesting a "pre-application" meeting to discuss the proposed project and any anticipated lease processing requirements prior to preparing the formal lease application form. Submittal of the lease application form and Minimum Expense Deposit initiates the CSLC official review. The application must be reviewed for completeness within 30 days of receipt. Thereafter, the applicant and CSLC staff will exchange information and engage in negotiations, and CSLC environmental staff will evaluate all the application materials and prepare any necessary CEQA documentation. Generally the land will need to be appraised (for rent calculation), and an engineering review may be needed. When the negotiations are complete and the decision is made to request the Commission to consider lease issuance, staff prepares and posts an agenda item on the CSLC website (<http://www.slc.ca.gov>).

The issuance by the Commission of any lease, permit, or other entitlement for use of State lands is reviewed for compliance with the provisions of CEQA. CSLC will not consider any proposed project until the requirements of CEQA have been satisfied. Most leases or other entitlements for use of State lands may require approvals from other Federal, State, or local agencies. On many proposed projects, CSLC is the lead agency under CEQA (the public agency with the principal responsibility for carrying out or approving a project) and is therefore responsible for preparing the environmental documentation appropriate for each project. For projects needing third-party incidental take coverage under CSLC's incidental take permit, CSLC would likely act as lead agency to prepare tiered CEQA documents from the Final DRECP and Final EIR/EIS. Lease approvals are considered at regularly scheduled public meeting of the Commission, which are usually held every other month. The agenda item contains a staff recommendation and any necessary action items on which the Commission must vote, including CEQA compliance and lease approval.

MONITORING AND COMPLIANCE OF LICENSED PROJECTS

Upon receipt of a lease application form and staff determination of estimated costs of other services needed to process the application, an applicant will be provided a reimbursement agreement to assure CSLC recovery of the total cost to process the application. These costs include processing archeological, biological, or other necessary surveys; and monitoring compliance with environmental mitigation requirements of the lease, lease management, and compliance with lease terms, including the terms and conditions of CSLC's incidental take permit. CSLC's lease compliance and enforcement unit track implementation of any specified lease provisions. CSLC environmental staff, or a third party consultant, track implementation of any mitigation monitoring program adopted at the time of the lease approval (pursuant to section 15097 of the CEQA Guidelines), including any measures specific to implementation of the incidental take permit requirements. Corrective action may be taken by the CSLC to remedy violations of lease terms, up to and including use of the security bond, litigation, and termination of the lease.

FUNDING ASSURANCES

CSLC will ensure adequate funding for processing lease applications and implementation of any required monitoring measures and lease terms, including the terms and conditions of CSLC's incidental take permit. CSLC will assure adequate funding to administer implementation of its incidental take permit by (1) providing for staff to review license applications and monitor certified projects through 2040; and (2) requiring license applicants to pay the appropriate incidental take mitigation fee and any other costs associated with implementing and monitoring Covered Activities, including CMAs, on project sites.

The CSLC is entitled to recover the full cost of the leasing process, including CEQA document preparation, from the applicant, pursuant to CSLC regulations and Section 21089 of CEQA. At the time of filing an application, each applicant is required to submit a \$25.00 Filing Fee and the appropriate Minimum Expense Deposit. The Minimum Expense Deposit is based upon expected CSLC costs, and includes such services as initial title determination, field inspections, preparing the document requested and land description, and office technical review. In addition, CSLC requires reimbursement of its costs in providing other services associated with processing lease applications, including:

- Processing environmental documents
- Review of environmental documents by the California Department of Fish and Wildlife
- Processing archeological, biological, or other necessary surveys
- Monitoring compliance with environmental mitigation requirements of lease, lease management, including rent reviews, compliance with lease terms, etc.
- Engineering review
- Advertising or public notification
- Duplicating or certifying papers
- Searching records or ordering title reports
- Appraisals

The application is not deemed to be complete and staff does not begin work on the project until the deposit is received. For renewable energy projects, the minimum deposit is \$25,000. The deposit is placed in a Reimbursement Account and the applicant is required to execute a legal contract known as a Standard Agreement (State of California form STD 213). CSLC staff charges its time against the account during the life of the agreement. If during the course of the project the expenses incurred exceed the amount of the deposit, then the applicant is required to submit additional funds into the account. For significant development projects such as large-scale renewable energy, the applicant also is required to submit a bond to insure performance of the lease conditions, including full site remediation upon the termination or expiration of the lease. The amount of the bond is directly related to the size and complexity of the project. The GCP mitigation fee will be imposed in addition to the Filing Fee and Minimum Expense Deposit.

Currently, CSLC's staffing for the DRECP consists of five positions: a supervisor, a senior environmental scientist, a land management specialist, a mineral resources specialist, and ancillary support functions for boundary determinations, GIS, and administrative support. Under Assembly Bill 982 (passed in 2011), CSLC staff time on DRECP planning activities is funded activities from the School Land Bank Fund. CSLC is authorized to reimburse the fund with a portion of the revenues generated from project leases as they are issued, and upon appropriation from the California State Legislature. These same staff will be responsible, and will be funded, for monitoring project proponent/lessee compliance with CSLC's incidental take permit for Covered Activities on project sites. The DRECP Coordination Group will be responsible for acquiring, monitoring, and managing mitigation lands within the DRECP Reserve, as funded by applicant mitigation fees. CSLC will impose the GCP mitigation fee in addition to the CSLC lease application and monitoring fees. The bond discussed above, and/or a Reimbursement Account for mitigation monitoring, would be required from the lessee as part of lease approval and would fund any such monitoring and compliance activities on project sites.

The cost and funding analyses contained in the Draft DRECP and Draft EIR/EIS describes the cost of implementing Conservation and Management Actions (CMAs) for CLSC projects. CSLC lessees will be responsible for funding implementation of CMAs on their project sites, construction and operations monitoring of their projects, and monitoring the extent of incidental take of Covered Species on their project sites; these expenditures are in addition to the GCP mitigation fee and will be made a condition of the lease. Within the DRECP Reserve, the DRECP Coordination Group will be responsible for acquiring mitigation lands, implementing CMAs and non-acquisition mitigation measures, and land management and monitoring, as funded by lessee mitigation fees.
