## Existing Renewable Energy Projects Within DRECP Plan Area

## O EXISTING RENEWABLE ENERGY PROJECTS WITHIN PLAN AREA

**Background.** The list of projects included in this file was developed to help define the number and capacity of existing renewable energy projects in the Plan Area. These projects are considered part of the affected environment in the EIR/EIS Volume III. A map indicating the locations of these projects is presented as Figure III.1-2.

Existing projects include those that are either operational or under construction as of October 2013. Two tables are attached:

- Table O-1: Summary of Existing RE Projects (data summarized from Table O-2)
- Table O-2: Existing RE Projects (all projects)

Table O-1 below presents the acreage of existing renewable energy projects in the DRECP Plan Area. For informational purposes, 57% (50,337 acres) of the land affected by existing renewable energy projects are located in the Preferred Alternative DFAs, as defined in Volume II. This represents less than 2.5% of the DFA acreage for the Preferred Alternative.

**Table O-1

\*The DFA locations for the Preferred Alternative are used to define in this exercise. While the sizes and locations of DFAs vary among alternatives, this data provides an example of the locations of the existing renewable energy in comparison with the proposed DFAs. The total acres of DFAs in the Preferred Alternative is 2,027,693.
