

Partners for Fish and Wildlife

Technical and Financial Assistance for Habitat Restoration

PROGRAM GUIDELINES SOUTH CAROLINA

The Partners for Fish and Wildlife program restores, improves, and protects fish and wildlife habitat on private lands through partnerships between the United States Fish and Wildlife Service (USFWS), individuals, and other organizations, while leaving the land in private ownership. This voluntary program was started in 1987 and has since enrolled thousands of landowners from every state in U.S. Over 170 landowners have enrolled in 38 counties of South Carolina.

Typical Partners for Fish and Wildlife Project Types *Projects may include, but are not limited to:*

- Replanting **bottomland hardwoods** on suitable sites such as riparian areas and open fields in floodplains.
- Restoring **wetland hydrology** by plugging drainage ditches, breaking tile drainage systems, installing water control structures, berm construction, re-establishing ephemeral pools, and re-establishing microtopography.
- Restoration and improvement of **longleaf pine forest** on suitable sites where the landowner's objectives include restoring longleaf ecosystem values. Practices include site preparation, planting, removal of hardwood competition, restoration of native ground layer vegetation, and firebreak disking. See details under "General Information" below.
- Planting suitable open areas with **native warm season grasses** and other native plants.
- Removal of **invasive exotic plants** which compete with native fish and wildlife and alter their natural habitats.
- Reconstruction of degraded **stream habitats** through bioengineering techniques.
- Planting Atlantic white cedar on suitable sites.
- Special management actions for federally listed imperiled species.

General Information

- Program projects must involve on-the-ground habitat restoration, be cost effective, and benefit Federal trust species (migratory birds, threatened species and endangered species, interjurisdictional fish, and other species of concern).
- Technical assistance is provided as needed and requested, to the extent that workload allows.
- Cooperator cost share is generally 50 percent of total project cost. Exceptions may be considered in certain cases where wildlife benefits are determined to be high, in high priority locations, or when the cooperator agrees to a higher percentage of match.
- The cost share range per project is from \$500 to \$25,000. The average cost share per project is \$8,000. Landscape-scale project maximum is \$200,000.
- After an agreement is signed the cooperator performs or contracts the work. Payment is reimbursement after work is completed.
- Biological significance and cost-effectiveness is important. Try to improve the most acres you can for the least amount of money with a high quality project ensuring long-term conservation benefits.
- Cooperators retain all rights to their land. USFWS personnel do not enter private property without permission.
- USFWS Partners program personnel can assist with information and coordination on USDA conservation programs.
- **Longleaf Pine Forest Restoration:** This involves restoring the longleaf pine ecosystem on appropriate sites where longleaf likely existed prior to European settlement. We offer assistance for: 1) site preparation and re-establishment of longleaf pine seedlings in fields and cut-over areas; 2) re-establishment of the native plant understory with grasses, legumes, and flowering herbs; 3) removal of dense hardwood midstory using approved herbicide and/or mechanical treatments; 4) gradual conversion of stands from loblolly/slash to longleaf; 5) firebreak layout and disking, and; 6) invasive exotic plant treatment. The minimum area eligible is 15 contiguous acres (exceptions may be authorized). Cut-over sites must have been non-longleaf before the harvest. Cooperators must be committed to maintaining prescribed fire on the site to reduce hardwood competition, to maintain open understory, to perpetuate native ground layer vegetation, and to retain the longleaf ecosystem values. We are restricted from providing funding assistance for prescribed burning unless the burn is performed by an entity that meets National Wildfire Coordinating Group qualification standards. A Safe Harbor Agreement is available for landowners who may be concerned about possible restrictions involving the red-cockaded woodpecker or who want to conserve endangered species.

Eligible Lands • private • tribal • non-federal • non-state

Projects Not Eligible • having low biological significance and/or low cost effectiveness • upland ponds / fish ponds
• greentree reservoirs • where pen-reared waterfowl will be released • backyard habitats
• use as compensatory mitigation for meeting requirements of any federal or state regulatory program

Criteria Used for Determination of Priority Projects

- Project provides significant benefit to threatened or endangered species, species of concern, species or habitats that are declining, imperiled, at-risk, or designated as high priority on the South Carolina Comprehensive Wildlife Conservation Strategy.
- High biological significance and high cost effectiveness
- Projects that result in self-sustaining systems that are not dependent on artificial structures
- Project site protected by conservation easement or other permanent protection
- Projects that reduce habitat fragmentation and establish corridors between protected lands
- Projects located in close proximity to protected habitat and complement the activities on that land (e.g., national wildlife refuge, private land conservation easements, heritage preserve, state wildlife management area, national forest, state forest, WRP easement, state park, certain Dept. of Defense and Dept. of Energy lands, etc.).
- Adjacent to sites under agreement in the Partners for Fish and Wildlife program, Wildlife Habitat Incentives Program (WHIP), or Conservation Reserve Program (CRP).
- Habitat restoration is typically favored over habitat enhancement activities.
- On longleaf pine projects, inclusion of native ground cover restoration as needed (grasses, legumes, herbs).
- Committing to an agreement period longer than the 10-year minimum
- Projects with a significant riparian or wetland restoration component
- Cooperator (multiple partners if applicable) agreeing to share higher percentage (>50%) of project cost.
- Projects located inside the program's priority focus area for South Carolina, which is approximately the South Atlantic Coastal Plain. Projects outside of the priority focus area may also be considered for funding.

Application and Funding Cycle

- If you are interested in pursuing a project under the Partners for Fish & Wildlife program you must contact a program biologist. Application form requirements vary by project so it is essential that you first make direct contact with us:
Joe Cockrell (843)727-4707 ext. 305 joe_cockrell@fws.gov
Jason Ayers (843)727-4707 ext. 220 jason_ayers@fws.gov
- USFWS - Partners for Fish & Wildlife
176 Croghan Spur Rd., Suite 200
Charleston, SC 29407
- Applications compete for funding with other applications from throughout South Carolina.
 - October 1: Application deadline for funds becoming available the following spring.
 - November: Applications are ranked on criteria listed above by a panel of natural resource professionals.
 - April - May: USFWS field office receives annual program allocation. Projects are approved for funding in order of ranking until the allocation is expended. Applicants are notified of status.
 - April to July: Landowner and USFWS sign an agreement. Landowner enrolls in online Automated Standard Application for Payment (ASAP) system.
 - Note: Reimbursement cannot be made for project activities that began before the initial project planning with USFWS. Any work performed before an agreement is signed is at risk of not being funded.

Agreement

- After the project is approved for funding, cooperator signs an agreement that secures the federal investment. The agreement describes the contributions of each party and states that the cooperator agrees to leave the habitat improvements in place for at least 10 years.
- Project work must be initiated within one year and completed within three years.

Cost-share Payment

- After the project is completed (portion or whole) and inspected, the cooperator applies for payment online through the Automated Standard Application for Payment (ASAP) system.
- Payment is made by direct deposit to the cooperator's bank account.

Monitoring

- A project biologist maintains contact with the cooperator, follows up with occasional site visits to monitor wildlife benefits and project success, and provides technical assistance as needed and requested.
