MEMORANDUM TO: Leslie Craig
Southeast Region Supervisor, NOAA Restoration Center

FROM: *Virginia M. Fay*
Virginia M. Fay
Assistant Regional Administrator, Habitat Conservation Division

SUBJECT: Essential Fish Habitat (EFH) assessment review for the Gulf Breeze Wayside Park Boat Ramp Improvements project in Pensacola Bay, Santa Rosa County, Florida

In response to the Deepwater Horizon oil spill, the Gulf Breeze Wayside Park Boat Ramp Improvements project will utilize standard construction methods to repair the existing public boat ramp and seawall cap previously damaged from the Deepwater Horizon oil spill cleanup efforts. These improvements would include repairing cracks and damage to the existing boat ramp and seawall cap, constructing a public restroom facility, as well as repairing and enhancing the parking area. Estuarine water column and sand substrates will be impacted and are identified and described as EFH under provisions of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act).

As specified in the Magnuson-Stevens Act, EFH consultation is required for federal actions which may adversely affect EFH. As the federal action agency, NOAA's Restoration Center prepared an EFH assessment and provided that document for our review by electronic mail dated March 5, 2014. The Southeast Region's Habitat Conservation Division (SER HCD) has reviewed the EFH assessment and finds the Restoration Center adequately evaluated potential project impacts to the federally managed species occurring within the influence of the project. We concur with the EFH assessment that project construction is not likely to adversely affect EFH and any disturbance to species will be minor and brief. The SER HCD has no EFH conservation recommendations to provide pursuant to Section 305(b)(2) of the Magnuson-Stevens Act at this time. Further consultation is not necessary unless future modifications are proposed and such actions may result in adverse impacts to EFH.
