MEMORANDUM TO: Leslie Craig
Southeast Region Supervisor, NOAA Restoration Center

FROM: 
Virginia M. Fay
Assistant Regional Administrator, Habitat Conservation Division

SUBJECT: Essential Fish Habitat (EFH) assessment review for the proposed
Wakulla County Mashas Sands Park Improvements project in and
adjacent to Ochlocknee Bay, Wakulla County, Florida

In response to the Deepwater Horizon oil spill, the proposed Wakulla County Mashas Sands Park Improvements project would improve recreation areas at the Wakulla County Mashas Sands Park. These improvements include: constructing observation platforms, boardwalks and walking paths, improving the boat ramp area and picnic areas, renovating the parking area and the restroom facility, and constructing a canoe and kayak launch site. Most work would be completed in the uplands; however, the proposed boat ramp improvements could include some in-water work. Estuarine water column and sand substrates will be impacted and are identified and described as EFH under provisions of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act).

As specified in the Magnuson-Stevens Act, EFH consultation is required for federal actions which may adversely affect EFH. As the federal action agency, NOAA's Restoration Center prepared an EFH assessment and provided that document for our review by electronic mail dated March 13, 2014. The Southeast Region's Habitat Conservation Division (SER HCD) has reviewed the EFH assessment and finds the Restoration Center adequately evaluated potential project impacts to the federally managed species occurring within the influence of the project. We concur with the EFH assessment that project construction is not likely to adversely affect EFH and any disturbance to species will be minor and brief. The SER HCD has no EFH conservation recommendations to provide pursuant to Section 305(b)(2) of the Magnuson-Stevens Act at this time. Further consultation is not necessary unless future modifications are proposed and such actions may result in adverse impacts to EFH.
