Good morning, Laurie:

In reference to the issuance of DOA permit SAM-2022-00826-JCC, I pen this email to clarify that the State is satisfied with both CZMA and 401WQC review processes. My office collaborated closely with both The Nature Conservancy (TNC) and the Mobile District U.S. Army Corps of Engineers during review of the TNC's application and does not require any further consultation with NOAA or EPA regarding TNC's proposed work to conserve and restore Robinson and Walker Islands as part of the Lower Perdido Islands Restoration Project as permitted under SAM-2022-00826-JCC.

There is a proposed modification to the work which expands the footprint of impact to state waterbottoms (borrow areas). ADCNR-SLD (Lead State agency for the ACAMP) approves the modification provided the total yd³ of sand is accounted for and documented.

J. Scott Brown, Chief
