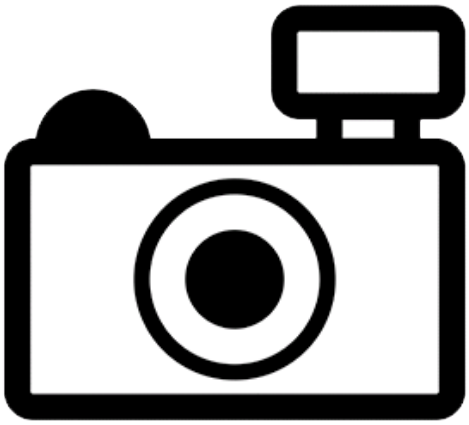
Trichomycterus goeldii (a catfish, no common name)

Ecological Risk Screening Summary

U.S. Fish and Wildlife Service, January 2017
Revised, May 2018
Web Version, 8/19/2019



1 Native Range and Status in the United States

Native Range

From Froese and Pauly (2018):

"South America: Mountain ranges of coastal basins of Rio de Janeiro, Brazil."

Status in the United States

This species has not been reported as introduced in the United States. There is no evidence that this species is in trade in the United States, based on a search of the literature and online aquarium retailers.

From Arizona Secretary of State (2006):

"Fish listed below are restricted live wildlife [in Arizona] as defined in R12-4-401. […] South American parasitic catfish, all species of the family Trichomycteridae and Cetopsidae […]"

From Dill and Cordone (1997):

"[…] At the present time, 22 families of bony and cartilaginous fishes are listed [as prohibited in California], e.g. all parasitic catfishes (family Trichomycteridae) […]"

From FFWCC (2016):

"Prohibited nonnative species are considered to be dangerous to the ecology and/or the health and welfare of the people of Florida. These species are not allowed to be personally possessed or used for commercial activities.
[The list of prohibited nonnative species includes:]
Parasitic catfishes […]
Trichomycterus goeldii"

From Louisiana House of Representatives Database (2010):

"No person, firm, or corporation shall at any time possess, sell, or cause to be transported into this state [Louisiana] by any other person, firm, or corporation, without first obtaining the written permission of the secretary of the Department of Wildlife and Fisheries, any of the following species of fish: […] all members of the families […] *Trichomycteridae* (pencil catfishes) […]"

From Mississippi Secretary of State (2019):

"All species of the following animals and plants have been determined to be detrimental to the State's native resources and further sales or distribution are prohibited in Mississippi. No person shall import, sell, possess, transport, release or cause to be released into the waters of the state any of the following aquatic species or hybrids thereof.
[The list includes all species of] Family Trichomycteridae"

From Legislative Council Bureau (2018):

"Except as otherwise provided in this section and NAC 504.486, the importation, transportation or possession of the following species of live wildlife or hybrids thereof, including viable embryos or gametes, is prohibited [in Nevada]: […]
All species in the families Cetopsidae and Trichomycteridae"

From Utah DNR (2012):

"All species of fish listed in Subsections (2) through (30) are classified [in Utah] as prohibited for collection, importation and possession […]
Parasitic catfish (candiru, carnero) family Trichomycteridae (All species)"

Means of Introductions in the United States

This species has not been reported in the United States.

2 Biology and Ecology

Taxonomic Hierarchy and Taxonomic Standing

From ITIS (2018):

"Kingdom Animalia
Subkingdom Bilateria
Infrakingdom Deuterostomia
Phylum Chordata
Subphylum Vertebrata
Infraphylum Gnathostomata
Superclass Actinopterygii
Class Teleostei
Superorder Ostariophysi
Order Siluriformes
Family Trichomycteridae
Subfamily Trichomycterinae
Genus *Trichomycterus*
Species *Trichomycterus goeldii* Boulenger, 1896"

From Fricke et al. (2019):

"**Current status:** Valid as *Trichomycterus goeldii* Boulenger 1896. Trichomycteridae: Trichomycterinae."

Size, Weight, and Age Range

From Froese and Pauly (2018):

"Max length : 9.9 cm TL male/unsexed; [de Pínna and Wosiacki 2003]"

Environment

From Froese and Pauly (2018):

"Freshwater; benthopelagic."

Climate/Range

From Froese and Pauly (2018):

"Tropical"

Distribution Outside the United States

Native

From Froese and Pauly (2018):

"South America: Mountain ranges of coastal basins of Rio de Janeiro, Brazil."

Introduced

This species has no known introductions.

Means of Introduction Outside the United States

This species has no reports of introductions.

Short Description

No information.

Biology

No information.

Human Uses

None reported

Diseases

No information available. No OIE-listed diseases (OIE 2019) have been documented in this species.

Threat to Humans

From Froese and Pauly (2018):

"Harmless"

3 Impacts of Introductions

No introductions of *Trichomycterus goeldii* have been reported outside its native range so no impacts of introduction are known.

The importation, possession, or trade of the parasitic catfish *T. goeldii* is prohibited or restricted in the following states: Arizona (Arizona Secretary of State 2006), California (Dill and Cordone 1997), Florida (FFWCC 2016), Louisiana (Louisiana House of Representatives Database 2010), Mississippi (Mississippi Secretary of State 2019), Nevada (Legislative Council Bureau 2018), and Utah (Utah DNR 2012).

4 Global Distribution

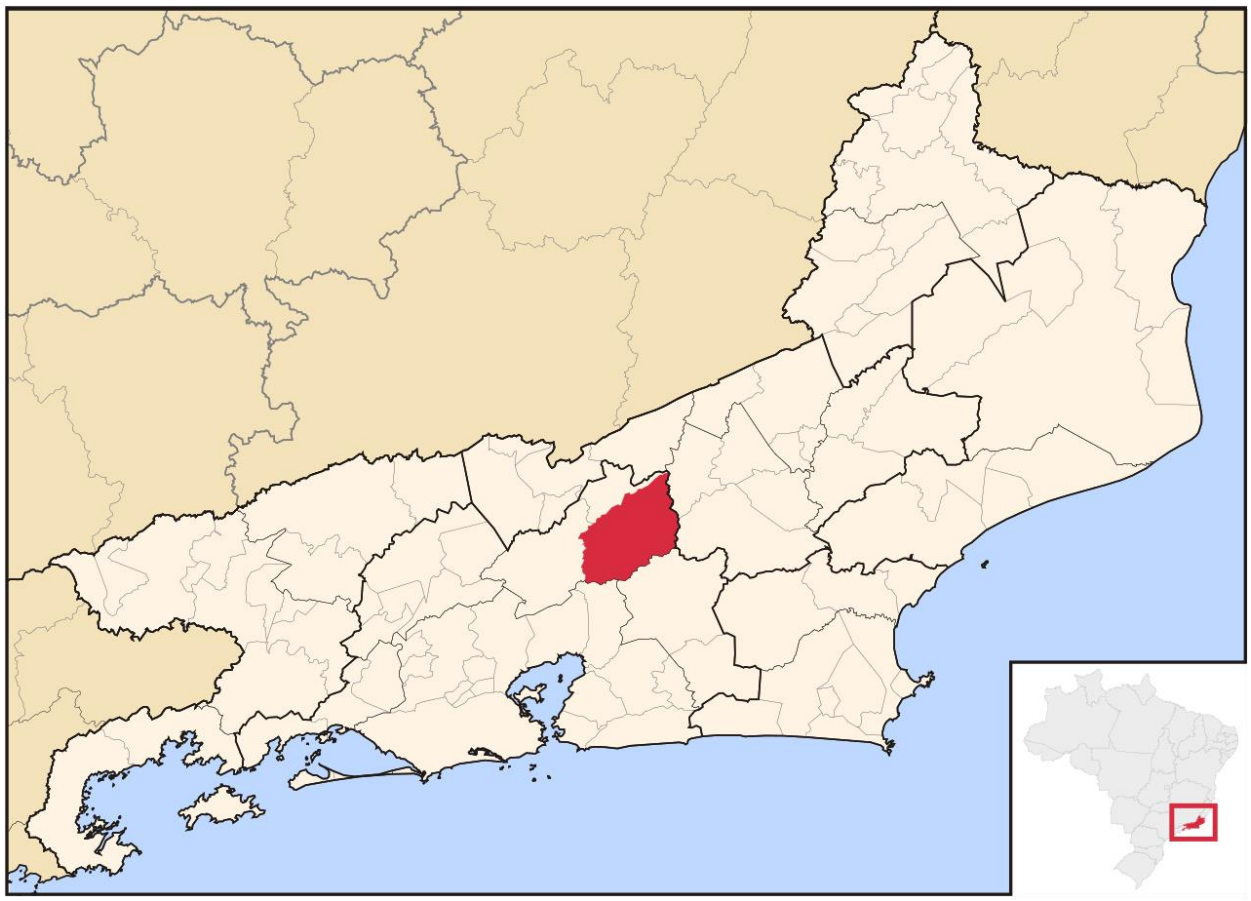


Figure 1. Map showing the location of Teresópolis within the State of Rio de Janeiro, with inset map showing the location of the State of Rio de Janeiro within Brazil. No georeferenced occurrences were available for *Trichomycterus goeldii*, but textual descriptions of occurrences mention Teresópolis (within the native range of *T. goeldii*) as a collection location (GBIF Secretariat 2019). Map by Raphael Lorenzeto de Abreu. Licensed under Creative Commons BY 2.5. Available: https://commons.wikimedia.org/w/index.php?curid=843652. (August 2019).

5 Distribution Within the United States

This species has not been reported within the United States.

6 Climate Matching

Summary of Climate Matching Analysis

The climate match (Sanders et al. 2018; 16 climate variables; Euclidean Distance) for the contiguous United States was low overall, reflected in a Climate 6 score of 0.005. Scores between 0.000 and 0.005, inclusive, are classified as low. Locally, the climate match was high in small, isolated areas in southern and eastern coastal Florida. The climate match was medium in most of peninsular Florida and along the Gulf Coast of Texas. The remainder of the contiguous

United States had a low match. Florida was the only State with a high individual climate score; all other States had low climate scores.

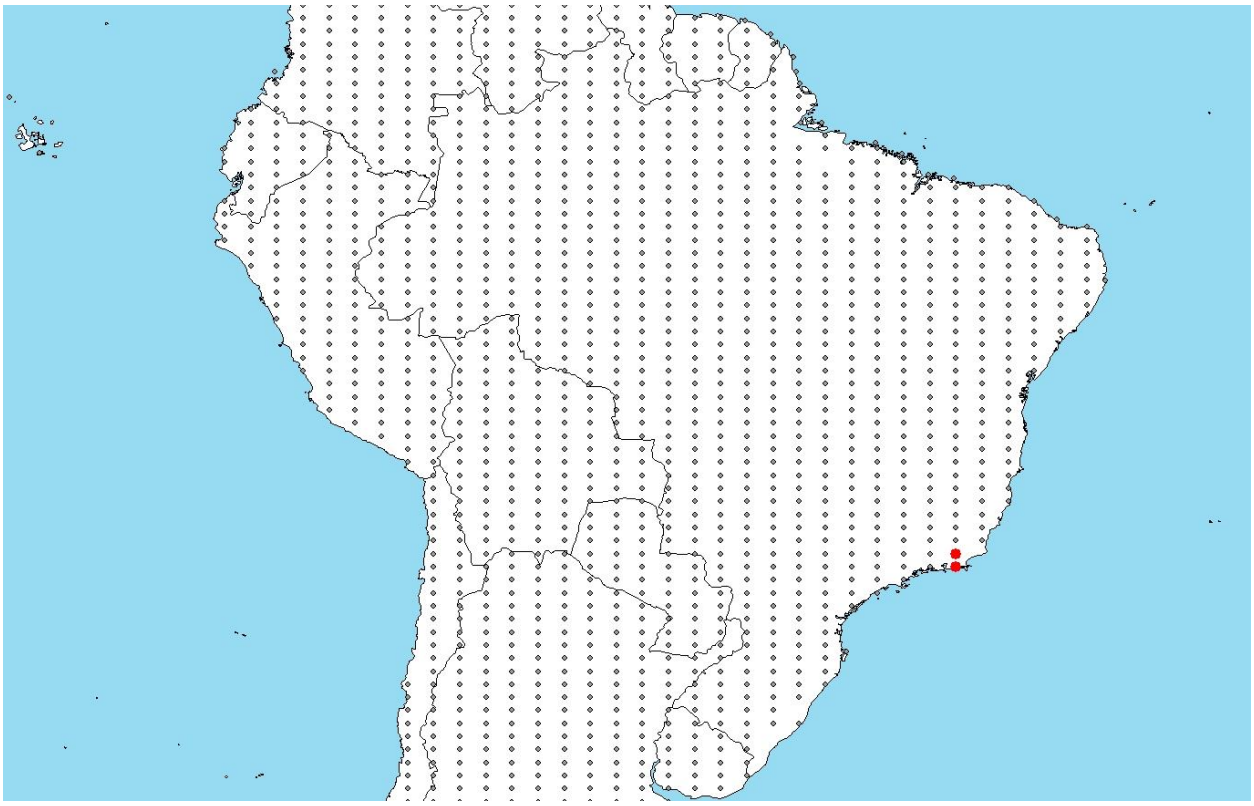

Figure 2. RAMP (Sanders et al. 2018) source map showing weather stations in South America selected as source locations (red; southeastern Brazil) and non-source locations (gray) for *Trichomycterus goeldii* climate matching. Source locations were approximated from verbal descriptions of collection locations in GBIF Secretariat (2019).

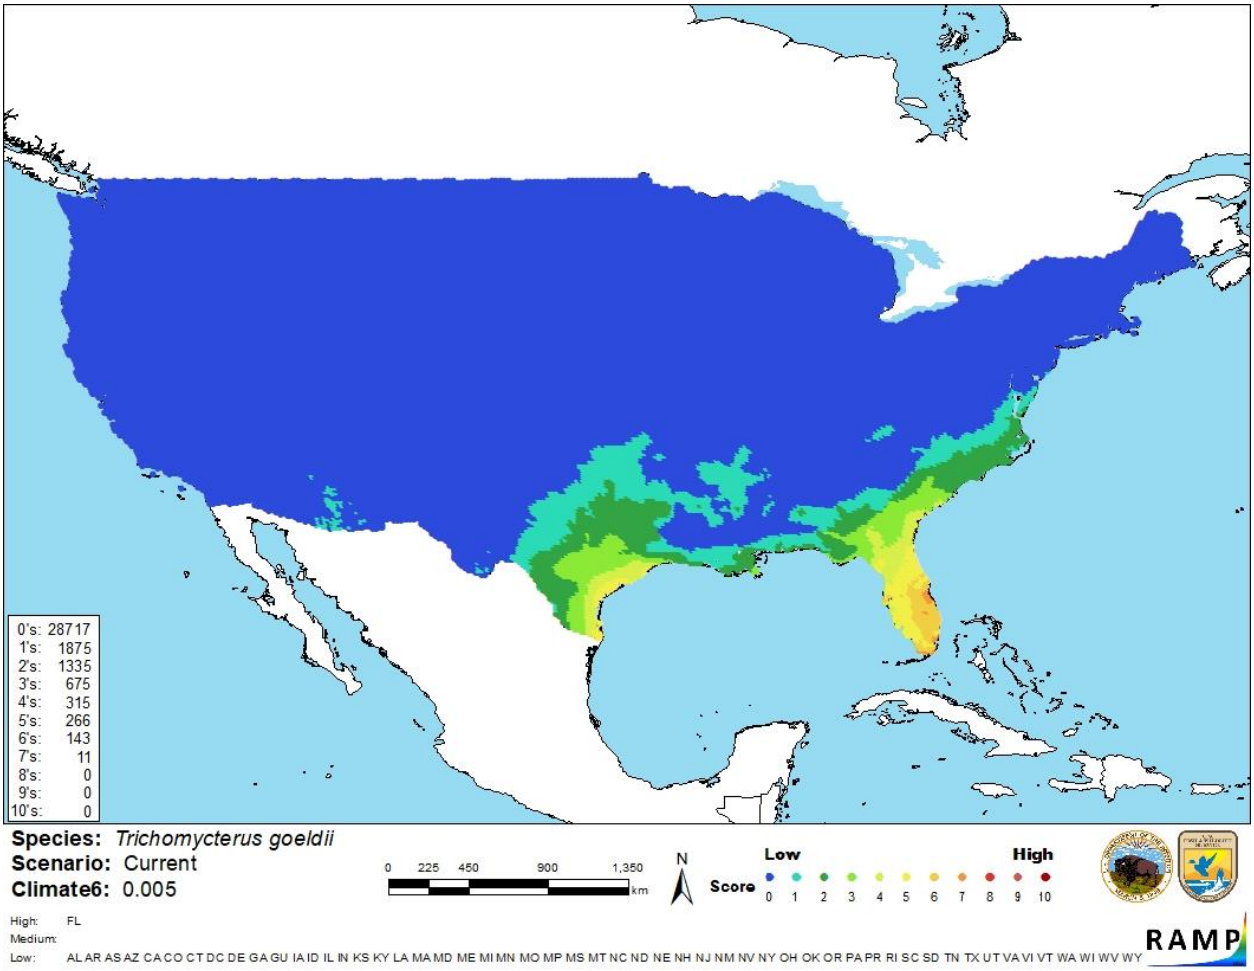

Figure 3. Map of RAMP (Sanders et al. 2018) climate matches for *Trichomycterus goeldii* in the contiguous United States based on source locations approximated from verbal descriptions of collection locations in GBIF Secretariat (2019). 0= Lowest match, 10=Highest match. Counts of climate match scores are tabulated on the left.

The "High", "Medium", and "Low" climate match categories are based on the following table:

Climate 6: Proportion of (Sum of Climate Scores 6-10) / (Sum of total Climate Scores)	Climate Match Category
0.000≤X≤0.005	Low
0.005<X<0.103	Medium
≥0.103	High

7 Certainty of Assessment

There is little knowledge on the biology and ecology of *Trichomycterus goeldii*. There are no records showing introductions of this species outside of its native range. Little information is known to conclude what kind of effect it could have if it were introduced. Due to lack of information, the certainty of assessment is low.

8 Risk Assessment

Summary of Risk to the Contiguous United States

Trichomycterus goeldii is a freshwater parasitic catfish from Brazil. This species is only known in the Mountain ranges of coastal basins of Rio de Janeiro, Brazil. It has not been introduced outside of its native range. Due to lack of introduction history, the history of invasiveness is uncertain. *T. goeldii* has a low overall climate match with the contiguous United States, with areas of medium to high match only in Florida and Texas. Due to the lack of information about potential impacts of introductions, the certainty of assessment is low. The overall risk posed by *T. goeldii* is uncertain.

Assessment Elements

- **History of Invasiveness (Sec. 3):** Uncertain
- **Climate Match (Sec.6):** Low
- **Certainty of Assessment (Sec. 7):** Low
- **Overall Risk Assessment Category: Uncertain**
