

AQUATIC ANIMAL DRUG APPROVAL PARTNERSHIP (AADAP) PROGRAM

The only program of its kind in the U.S.

Develops effective, safe, Food and Drug Administration (FDA)-approved medications for fish

Partners with federal, state, tribal, university, and private-sector partners from across the nation

Has contributed to virtually every new fish medication approved by the FDA

End result, over 50 million fish saved each year for restoration, recovery, and recreation

It takes all of us working together to conserve America's aquatic habitat—and the fish and wildlife that depend on it.
