¹ The Kentucky State Nature Preserves Commission (<http://www.naturepreserves.ky.gov/>) includes three additional mussel species on their official list for Kentucky (see below). These species have been removed from our list because we consider them to be likely extirpated from the state. The first two species, tubercled blossom and yellow blossom, have not been observed in Kentucky or elsewhere since the 1950s/60s. White Catspaw is currently known only from the St. Joseph River in Indiana and Ohio.

Tubercled blossom	<i>Epioblasma torulosa torulosa</i>	E
Yellow blossom	<i>Epioblasma florentina florentina</i>	E
White Catspaw	<i>Epioblasma obliquata perobliqua</i>	E

Candidate Species – plant and animal taxa considered for possible addition to the federal list of Endangered and Threatened species. These are taxa for which the Fish and Wildlife Service (Service) has on file sufficient information on biological vulnerability and threat(s) to support issuance of a proposal to list, but issuance of a proposed rule is currently precluded by higher priority listing actions (61 FR 7596-7613).

Candidate species have no protection under the Endangered Species Act (ESA), but are listed above for early project planning consideration. Candidate species could be proposed or listed during the project planning period and would then be covered under Section 7 of the ESA. The Service advises an evaluation of potential effects on candidate species that may occur in a particular project area.
