## ABSTRACT

A total of 1.36 million spring chinook salmon, 309,725 summer chinook salmon, and 206,000 steelhead trout were coded wire tagged and released from Lower Snake River Compensation Plan hatcheries in Idaho for the reporting period of July, 1, 1987 to September 30, 1988. For this period, 2,248 chinook salmon and 378 steelhead trout snouts were processed for coded wire tag recovery.

Joseph Norton  
Senior Fishery Technician

## **INTRODUCTION**

Chinook salmon and steelhead trout originating from Lower Snake River Compensation Plan (LSRCP) hatcheries will constitute a significant portion of anadromous runs returning as adults to Idaho. A comprehensive evaluation is required and is being funded by the U.S. Fish and Wildlife Service to properly manage the LSRCP programs and the wild stocks with which these stocks are intermingled. The evaluation program requires the ability to identify individual fish groups that are harvested, returned to the hatchery, or otherwise collected. Coded wire tagging has been, and continues to be, used for most studies to mass mark juvenile salmon and steelhead prior to release.

## **OBJECTIVES**

1. Remove, identify, and record coded wire tags recovered from adult salmon and steelhead harvested or otherwise collected in Idaho.
2. Document contribution of Idaho LSRCP-reared fish in downstream Columbia River and ocean fisheries.

## **METHODS**

Chinook salmon and steelhead trout snouts were removed from appropriately fin-marked salmon and steelhead either in the harvest or at hatchery racks. Coded wire tags within the snouts were removed and decoded. Information from coded wire tags from salmon and steelhead recovered outside of Idaho was processed as received from other agencies. The information was entered on the existing coded wire tag data base.

## **RESULTS**

During the reporting period, total fish marked and released from Lower Snake River hatcheries included 1.36 million spring chinook salmon (Table 1), 309,725 summer chinook salmon (Table 2), and 206,000 steelhead trout (Table 3).

Chinook salmon snouts recovered and processed for coded wire tags included 1,001 in 1987 and 1,247 in 1988. Steelhead trout snouts processed totalled 398 for the 1987-1988 run. Detailed recovery information for steelhead trout (run years 1984-1985, 1985-1986, 1986-1987, and 1987-1988) and chinook salmon (1984-1988) can be found in the Appendices.

Table 1. Summary of LSRCP-reared spring chinook salmon coded wire tagged and released in fall 1987 or spring 1988.
