Dec 13, 2011

US Fish & Wildlife Service

Dear & Wildlife Service,

Please note my objection to the Habitat Conservation Plan and Incidental Take Permit being sought by NiSource for a one mile wide, 15,000 mile long natural gas pipeline corridor through 14 states. Both the geographic scale and the 50 year duration of the Incidental Permit being sought are absurd.

The Habitat Conservation Plan and Incidental Take Permit being sought by NiSource would limit the oversight of US Fish and Wildlife, which is critical to insuring that NiSource first pursues all reasonable alternatives and that they actually implement appropriate mitigation measures when they destroy critical habitat of endangered species. Without this oversight, it will be extraordinarily difficult to assess and address environmental impacts - which on a project of this size and duration are worth paying close attention to.

The Draft Environmental Impact Statement only addresses a few of the impacts this project is likely to have. If any future actions have impacts beyond those few discussed in the environmental impact statement, government and private citizens will have limited ability to hold NiSource accountable. For these reasons we request US Fish and Wildlife Service deny the application of NiSource.

Thank you,

Mrs. Jennifer Li  
139 Newman Ct  
Pennington, NJ 08534-5197

US Fish & Wildlife Service

Dear & Wildlife Service,

Please note my objection to the Habitat Conservation Plan and Incidental Take Permit being sought by NiSource for a one mile wide, 15,000 mile long natural gas pipeline corridor through 14 states. Both the geographic scale and the 50 year duration of the Incidental Permit being sought are absurd.

Repeatedly in New Jersey we see land taken for pipelines and more because the land is easy pickings - no list of property owners and no high price tags. This is wrong. Our lands and the species they protect are critical in NJ and the other states that would be traversed by NiSource. Oversight by the US Fish and Wildlife us critical because local / state rules become too easily enmeshed in state politics. Please deny this permit.

The Habitat Conservation Plan and Incidental Take Permit being sought by NiSource would limit the oversight of US Fish and Wildlife which is critical to insuring that NiSource first pursues all reasonable alternatives and that they actually implement appropriate mitigation measures when they destroy critical habitat of endangered species.

US Fish & Wildlife Service

Dear & Wildlife Service,

Please note my objection to the Habitat Conservation Plan and Incidental Take Permit being sought by NiSource for a one mile wide, 15,000 mile long natural gas pipeline corridor through 14 states. Both the geographic scale and the 50 year duration of the Incidental Permit being sought are absurd.

The Habitat Conservation Plan and Incidental Take Permit being sought by NiSource would limit the oversight of US Fish and Wildlife which is critical to insuring that NiSource first pursues all reasonable alternatives and that they actually implement appropriate mitigation measures when they destroy critical habitat of endangered species. That, in our greed and ignorance we allow this 15,000 mile long natural gas pipeline corridor through 14 states, we would be so stupid, is incredible. The drilling sites are killing people, animals and contaminating air, water and land. Now we must protect the flora, fauna and wild life that makes life what it is. First of all, there have been articles about the metal in the pipeline which is said to come from China is also said to be difficult to work with and very difficult to weld. Since the 15,000 mile pipeline will have many welds, we can not in good conscience or morality support it and ask that all elected officials, department heads, organization representatives, landowners, the public must speak up and reject the 50 year lease permit being sought.

The Draft Environmental Impact Statement only addresses a few of the impacts this project is likely to have. If any future actions have impacts beyond those few discussed in the environmental impact statement, government and private citizens will have limited ability to hold NiSource accountable. For these reasons we request US Fish and Wildlife Service deny the application of NiSource.

Dec 10, 2011

US Fish & Wildlife Service

Dear & Wildlife Service,

Please note my objection to the Habitat Conservation Plan and Incidental Take Permit being sought by NiSource for a one mile wide, 15,000 mile long natural gas pipeline corridor through 14 states. Both the geographic scale and the 50 year duration of the Incidental Permit being sought are absurd.

I am most concerned that the Habitat Conservation Plan and Incidental Take Permit being sought by NiSource would severely limit the oversight of US Fish and Wildlife Service. USF&WS is charged with the protection of threatened and endangered species. USF&W, in particular, must ensure that NiSource first pursues all reasonable alternatives and that they actually implement appropriate mitigation measures when they destroy critical habitat of endangered species.

The Draft Environmental Impact Statement only addresses a few of the impacts this project is likely to have. If any future actions have impacts beyond those few discussed in the environmental impact statement, government and private citizens will have limited ability to hold NiSource accountable. For these reasons we request US Fish and Wildlife Service deny the application of NiSource.

US Fish & Wildlife Service

Dear & Wildlife Service,

Please note my objection to the Habitat Conservation Plan and Incidental Take Permit being sought by NiSource for a one mile wide, 15,000 mile long natural gas pipeline corridor through 14 states. Both the geographic scale and the 50 year duration of the Incidental Permit being sought are absurd.

The Habitat Conservation Plan and Incidental Take Permit being sought by NiSource would limit the oversight of US Fish and Wildlife which is critical to insuring that NiSource first pursues all reasonable alternatives and that they actually implement appropriate mitigation measures when they destroy critical habitat of endangered species.

The Draft Environmental Impact Statement only addresses a few of the impacts this project is likely to have. If any future actions have impacts beyond those few discussed in the environmental impact statement, government and private citizens will have limited ability to hold NiSource accountable. For these reasons we request US Fish and Wildlife Service deny the application of NiSource.

Thank you,

Ms. Andrea Krochalis  
9428 Patterson Dr  
Bent Mountain, VA 24059-2218

The Habitat Conservation Plan and Incidental Take Permit being sought by NiSource would limit the oversight of US Fish and Wildlife which is critical to insuring that NiSource first pursues all reasonable alternatives and that they actually implement appropriate mitigation measures when they destroy critical habitat of endangered species.

My state of New York already has endangered and threatened species (such as the Massasauga rattlesnake in the Cicero Swamp), and not enough government money has been allocated to protect them adequately. The expedited plan for the expanded gas line would make it even more difficult for endangered and threatened animals and plants to survive.

The Draft Environmental Impact Statement only addresses a few of the impacts this project is likely to have. If any future actions have impacts beyond those few discussed in the environmental impact statement, government and private citizens will have limited ability to hold NiSource accountable. For these reasons we request US Fish and Wildlife Service deny the application of NiSource.

The Habitat Conservation Plan and Incidental Take Permit being sought by NiSource would limit the oversight of US Fish and Wildlife which is critical to insuring that NiSource first pursues all reasonable alternatives and that they actually implement appropriate mitigation measures when they destroy critical habitat of endangered species.

Pipelines leak sooner or later; that's the reality. We know from other leaks, such as the Yellowstone leak, that corporations cut corners and don't properly maintain and monitor pipelines - even if they have mitigation procedures in place. It makes little difference if no one is really watching to take immediate action. The best mitigation measures require full implementation and constant oversight. That's expensive! Can NiSource ensure proper safe guards? What are the penalties and recourse when NiSource fails to perform when the inevitable leak occurs?

The Draft Environmental Impact Statement only addresses a few of the impacts this project is likely to have. If any future actions have impacts beyond those few discussed in the environmental impact statement, government and private citizens will have limited ability to hold NiSource accountable. For these reasons we request US Fish and Wildlife Service deny the application of NiSource.

The Habitat Conservation Plan and Incidental Take Permit being sought by NiSource would limit the oversight of US Fish and Wildlife which is critical to insuring that NiSource first pursues all reasonable alternatives and that they actually implement appropriate mitigation measures when they destroy critical habitat of endangered species.

Just the idea of cutting through plant and animal habitat, soils and free flowing water terrain for 15,000 miles is incredible, and would be the cause of a great deal of scientific study. No mitigation would be necessary, in all likelihood, if one valued the sustainability of the 14 states bioregions, over the temporary gain from natural gas.

The Draft Environmental Impact Statement only addresses a few of the impacts this project is likely to have. If any future actions have impacts beyond those few discussed in the environmental impact statement, government and private citizens will have limited ability to hold NiSource accountable. For these reasons we request US Fish and Wildlife Service deny the application of NiSource.

Dear & Wildlife Service,

Please note my objection to the Habitat Conservation Plan and Incidental Take Permit being sought by NiSource for a one mile wide, 15,000 mile long natural gas pipeline corridor through 14 states. Both the geographic scale and the 50 year duration of the Incidental Permit being sought are absurd.

The Habitat Conservation Plan and Incidental Take Permit being sought by NiSource would limit the oversight of US Fish and Wildlife which is critical to insuring that NiSource first pursues all reasonable alternatives and that they actually implement appropriate mitigation measures when they destroy critical habitat of endangered species.

The EIS is incomplete and inadequate with regard to the secondary, indirect impacts of this program and the real and direct impacts resulting from related and cumulative associated projects. The pipeline facilitates and expedites the development of both the sources of the gases and their uses.

Currently few considerations are given for the public to review and comment on the environmental impacts of the gas sources and thereby the overall project/program is incomplete and unmitigated.

Other environmentally superior pipelines and transmission systems for energy and even gases are available without the requirements for the proposed actions and related downstream and upstream project and impacts.

The Draft Environmental Impact Statement only addresses a few of the impacts this project is likely to have. If any future actions have impacts beyond those few discussed in the environmental impact statement, government and private citizens will have limited ability to hold NiSource accountable. For these reasons we request US Fish and Wildlife Service deny the application of NiSource.
